1 Overview of the *Ruiju Myōgishō*

Shōju Ikeda

Date published: April 20, 2025

This chapter is part of the Core Documentation. It provides an overview of the *Ruiju Myōgishō*, detailing its extant manuscripts, presumed compiler and provenance, scholarly significance, structural organization, textual sources, available facsimiles and indices, as well as pertinent secondary literature.

1.1 Manuscript Traditions

The extant manuscripts of the *Ruiju Myōgishō* fall into two distinct textual lineages: the original compilation and its later redactions.

The sole surviving exemplar of the original compilation is held by the Archives and Mausolea Department of the Imperial Household Agency, and this lineage is often referred to as the *gensenbon* (original compilation) tradition. The manuscript in question was introduced in 1950 as the *Zushoryō* manuscript (Library of Ancient Books manuscript). The redacted lineage, alternatively termed the *kaihenbon-kei* (redacted version lineage) or *Kōekibon* tradition, includes several known manuscripts: the Kanchi-in manuscript, the Kōzan-ji manuscript, the Renshō-in manuscript, the Sainen-ji manuscript, and the Hōbodai-in manuscript. Of these, only the Kanchi-in manuscript survives in complete form; the remaining examples are fragmentary or incomplete. The redacted tradition has been the subject of sustained scholarly inquiry since the Edo period, beginning with the work of Ban Nobutomo and others.

In Japanese scholarship, it is common practice to refer to individual manuscripts by appending *bon* (meaning “copy” or “text”) to the name of the holding temple or institution—for example, *Kanchi-in bon*. In this paper, however, these will be referred to using the English term “manuscript” for clarity and consistency.

In contemporary scholarship, the work is frequently referred to in abbreviated form as the *Myōgishō*.

1.2 Compiler

The compiler of the original compilation is presumed to have been a Buddhist scholar-monk affiliated with the Hossō school, or possibly trained in both the Hossō and Shingon traditions, though their identity remains unknown. The compiler of the redacted version is likewise unidentified but is generally believed to have been a Shingon scholar-monk. A long-standing theory attributing the work to Sugawara no Koreyoshi is now considered erroneous.

1.3 Date of Compilation

The sole extant exemplar of the original compilation—the *Zushoryō* manuscript—is a fragment of a single fascicle categorized under the **Dharma section (*hōbu*)**, referring to one of the traditional Buddhist categories corresponding to the Three Jewels (*Buddha, Dharma, Sangha*).

Although it bears no colophon or scribal note, it is generally dated to the Insei (cloistered rule) period. The text makes reference to the monk *Eichō Sōzu* (Eichō, Bishop), who is known to have received the title *Sōzu* in 1081 (Eihō 1). Based on this and other circumstantial evidence, the work is believed to have been compiled by around the year 1000.

As for the redacted version, a manuscript from Kōzan-ji contains a marginal note in the hand of the Kōyasan monk *Genshō*, dated to 1178 (Jishō 2). Since this note corresponds to content found in the redacted *Ruiju Myōgishō*, it is inferred that the revised compilation had been completed by that time.

1.4 Significance

The *Ruiju Myōgishō* lists Chinese characters, presented either as individual graphs or as compounds. These entries are typically accompanied by various forms of explanatory notes, including:

- fanqie spellings (反切) to indicate pronunciation,
- homophone glosses (類音注),
- Sino-Japanese readings (字音) transcribed in katakana (片仮名),
- Semantic Glosses in Chinese (漢文による意義注) explaining character meanings in literary Chinese,
- Japanese Native Readings (wakun, 和訓) transcribed in katakana, and

- **Notes on Character Form** (字体注) that specify orthographic variants such as “standard” (正) and “popular/variant” (俗) forms.

Furthermore, tone marks (shōten, 声点) are sometimes added to both the Sino-Japanese and native readings. Consequently, the *Myōgishō* is an invaluable resource for research in the history of the Japanese lexicon, the historical phonology of Sino-Japanese character readings, and the history of Chinese character forms as used in Japan.

1.5 Radical Structure

According to the Kanchi-in manuscript, the *Ruiju Myōgishō* is organized into 120 sections grouped under the three divisions of the Buddhist Triratna: Buddha (仏), Dharma (法), and Sangha (僧). Each division is further subdivided into several volumes or fascicles (巻 *kan*), such as “Upper,” “Middle,” and “Lower.” Each division contains 40 sections based on semantic radicals. The table below presents the full list of radicals used, shown with their associated head characters (部首字).

Buddha Division (仏)

(Upper Volume)

1 人 2 亻 3 辵 4 匚 5 走 6 麦 7 一 8 | 9 十 10 身

(Middle Volume)

11 耳 12 女 13 舌 14 口 15 目 16 鼻 17 見 18 日 19 田 20 肉

(Lower Volume, Part 1)

21 舟 22 骨 23 角 24 貝 25 頁 26 彡 27 髟 28 手 29 木 30 犬

(Lower Volume, Part 2)

31 牛 32 片 33 豸 34 乙 35 儿 36 収 37 八 38 大 39 火 40 黒

Dharma Division (法)

(Upper Volume)

41 水 42 氵 43 言 44 足 45 立 46 豆 47 卜 48 面 49 齒 50 山

(Middle Volume)

51 石 52 玉 53 色 54 邑 55 阜 56 土 57 心 58 巾 59 糸 60 衣

(Lower Volume)

61 示 62 禾 63 米 64 丷 65 宀 66 勹 67 穴 68 雨 69 門 70 口 71 尸 72 疒 73 广 74 鹿 75 疒 76 歹 77 子 78 斗 79 軌 80 寸

Sangha Division (僧)

(Upper Volume)

81 艸 82 竹 83 力 84 刀 85 羽 86 毛 87 食 88 金

(*Middle Volume*)

89 亼 90 爪 91 网 92 皿 93 瓦 94 缶 95 弓 96 廌 97 矢 98 斤 99 矛 100 戈 101 欠 102 又 103 支 104 殳 105 皮 106 革 107 韋 108 車 109 羊 110 馬 111 鳥 112 隹

(*Lower Volume*)

113 魚 114 虫 115 鼠 116 龜 117 鬼 118 風 119 酉 120 雜

Note on Organization:

The radical system employed in the *Ruiju Myōgishō* follows the structure of the *Yùpiān* (『玉篇』) compiled by Liang dynasty scholar Gu Yewang, which comprises 542 sections.

Radicals of similar form were grouped together (e.g., integrating 彳 and 行 under a single radical), while those with fewer entries were consolidated into the final miscellaneous section (雜).

Additionally, the ordering of radicals reflects both semantic grouping (e.g., parts of the body, food, clothing, animals, plants, etc.) and visual similarity of character shapes. For example, the 女 radical follows 耳, and 言 follows 讠, likely because the cursive or semi-cursive forms of 耳 and 言 resemble 女 and 讠, respectively.

1.6 Number of Entries

The term *entry* refers to a unit consisting of both the headword and its accompanying definitions (original glosses). To provide a general sense of the scope of the *Ruiju Myōgishō*, we may look to the Kanchi-in manuscript for a representative overview. The following table presents a summary of the number of entries, the number of individual headwords, and the number of compound expressions found in each of the ten volumes, from the *Buddha* (Upper) through the *Sangha* (Lower) sections.¹

Table: Number of Entries, Characters, and Compound Expressions by Volume (Kanchi-in Manuscript)

The following table summarizes the distribution of character entries across the ten volumes of the *Ruiju Myōgishō* as preserved in the Kanchi-in manuscript. The work is structured into three main sections—Buddha (仏), Dharma (法), and Sangha (僧)—each comprising multiple volumes. The entries are classified by the number of characters per

¹ These figures differ in some respects from those given in Ikeda, Shōju, Liú Guānwěi, Jung Munho, Zhāng Xīnfāng, and Lǐ Yuán, “Kanchi-in bon *Ruiju Myōgishō* Zenbun Tekisuto Dētabēsu: Sono Kōchiku Hōhō to Keishutsu Kōmoku-tō no Keiryō” (*Kuntengo to Kuntēn Shiryō* 144, 2020): 105–129, owing to subsequent corrections made after further review; this does not affect the overall picture.

expression (from single-character to seven or more), along with totals for entries, characters, and compound expressions.

Volum e	1- char	2- char	3- cha r	4- cha r	5- cha r	6- cha r	7+ cha r	Total Entrie s	Total Characte rs	Compoun d Expressio ns

1.7 Sources

Original Compilation

The Zushoryō manuscript of the original compilation, though fragmentary and classified under the Hōbu-jō (Department of Dharma: Upper) section, is distinguished by its faithful citation of a wide range of texts, including bibliographic and authorial attributions. It is widely utilized as a vital source in the study of the history of the Japanese language.

The manuscript contains 3,657 entries in total, of which 951 are single-character headwords; the remainder are compound expressions. The majority of these compounds are derived from Buddhist glossaries such as Xuanying's *Yiqiejing yinyi*, Shingō's *Daihannyakyō Onkun*, Chūzan's *Myōhōrengekyō Shakumon*, and works attributed to Cien.

Beyond Buddhist phonetic commentaries, many entries are drawn from classical lexica such as Gu Yewang's *Yupian*, Kūkai's *Tenrei Banshō Meigi*, Sugawara no Koreyoshi's *Tōkyū Setsuin*, and Minamoto no Shitagō's *Wamyō Ruijushō*.

The citations from these sources follow a fixed order of precedence: in semantic glosses in literary Chinese, sacred Buddhist texts (*naiten*) are prioritized over secular Chinese or native Japanese texts (*geten*). The Japanese native readings (*wakun*) are based on annotated editions (*kuntenbon*) of secular literature. Tone marks (*shōten*) are applied with precision, offering valuable information about vocabulary and pitch accent in the Heian period. These tone marks also appear in the phonetic glosses of Chinese characters—such as *fanqie*, homophonic glosses, and katakana transcriptions—making the manuscript an important resource for the study of Sino-Japanese phonology.

Revised Compilation

The Kanchi-in manuscript of the revised compilation—also known as the **Kaihenbon** or **Kōekibon**—contains approximately 32,000 headword entries and about 34,000 Japanese native readings (*wakun*). Of these, roughly 10,000 *wakun* are annotated with tone marks (*shōten*). The names of authors and titles of cited sources found in the original compilation have been removed, and many of the semantic glosses in literary Chinese have likewise

been omitted. Japanese native readings (*wakun*) originally recorded in *man'yōgana* have been replaced with katakana.

There is a substantial expansion of single-character entries. For items carried over from the original compilation, Japanese native readings have been added and reorganized; for new entries introduced in the revised version, a large number of Japanese native readings have been supplemented as well, resulting in a significantly enlarged corpus of Japanese native readings.

Notes on Character Form (字体注), which provide details on **Variant Characters**

(*itaiji*) and distinctions such as “standard” (正, *sei*) and “popular/variant” (俗, *zoku*) forms, along with **Phonetic Glosses** (字音注) indicating **Go-on** (呉音; also known as *Wa-on*, reflecting 5th-6th century pronunciations from Southern China, possibly transmitted via the Korean Peninsula) and **Kan-on** (漢音; also known as **Sei-on**, reflecting 7th-9th century pronunciations from Northern China, notably the Chang’an dialect) for the characters, together constitute a rich repository of materials for the study of Japanese linguistic history.

Within each radical category, headword entries are often arranged either by visual similarity or according to the character ordering found in the *Yupian*—referred to here as the *Gyokuhen jijun-gun* (“Yupian character order groups”).

Although only the *Hōbu-jō* (Upper Dharma) section of the original compilation survives, comparison between the original and revised versions reveals the nature of additions and editorial changes. For sections no longer extant in the original compilation, it is possible to identify underlying textual sources by cross-referencing with the principal reference works that were extensively cited in the original. Of particular importance are frequently referenced texts such as *Yiqiejing yinyi*, *Tenrei Banshō Meigi*, and *Wamyō Ruijushō*, all of which remain extant in complete form. These sources should be consistently consulted when interpreting the revised compilation.

1.8 Facsimile

1.8.1 Original Compilation

Zushoryō Manuscript

Formerly held in the collection of the Shimizudani Kimiyasu family and currently preserved by the Archives and Mausolea Department of the Imperial Household Agency (*Kunai-chō Shoryōbu*), this manuscript was first published in 1950 as a facsimile edition titled *Zushoryōbon Ruiju Myōgishō*, retaining its original Japanese-style binding. The edition includes an introductory essay by Hashimoto Fumio and is available for viewing via the [National Diet Library Digital Collections](#).

A Western-style bound edition was reissued in 1969, followed by a revised edition in 1976 featuring a complete set of indices—for sources, *kana* glosses, and Chinese characters—accompanied by commentary by Tsukishima Hiroshi, a *kana* index by Miyazawa Toshimasa, and a kanji index by Sakai Kenji.

The extant portion of the manuscript corresponds to the *Hōbu jōge* (“Upper” and “Lower” Dharma sections), specifically the upper volume (*jōsatsu*), which covers 20 radicals out of a total of 40 in this section. It is generally believed that the full compilation originally consisted of two volumes each for the Buddha, Dharma, and Sangha sections. The character “五” (“5”) inscribed in the upper right corner of the cover suggests that this volume was originally the fifth in the full six-volume set.

On March 26, 2025, a color version of the manuscript was made publicly available via the Shoryōbu Catalog and Image Database of the Archives and Mausolea Department.

1.8.2 Revised Compilation

Kanchi-in Manuscript

Originally housed at Tō-ji’s Kanchi-in, this complete manuscript—consisting of one volume of section headings and ten volumes of main text—is now preserved at the Tenri Central Library. According to colophons, it was copied by Jinen in 1241 (Ninji 2) and later recopied by Kenkei in 1251 (Kenchō 3).

Several facsimile and reproduction editions exist. The commonly cited versions are listed below, followed by brief descriptions:

- **Kichōtoshō Edition (1937):** A collotype facsimile edition in its original format, published by the Kichōtoshō Fukuseikai, with commentary by Yamada Yoshio. Available via the [National Diet Library Digital Collections](#).
- **Koten Zenshū Edition (1938–1940):** Reproduced using letterpress printing by the Nihon Koten Zenshū Kankōkai, including *kana* and kanji indexes edited by Masamune Atsuo.
- **Kazama Edition (1954–1955):** Republished by Kazama Shobō with commentary by Nakada Norio. Volume 1 contains the main text; Volume 2 contains kanji and *kana* indexes. **Letterpress reproduction.** This is a convenient reference edition as the index locations correspond to its pagination.
- **Old Tenri Edition (1976):** Reproduced with corrected foliation in Vols. 32–34 of the *Tenri Toshokan Zenpon Sōsho: Washo no Bu*, with commentary by Yoshida Kanehiko. Published by Tenri University Press and distributed by Yagi Shoten. Locations are cited using the original volume and folio numbers. Printed in monochrome using offset printing.
- **New Tenri Edition (2018):** Published in Vols. 9–11 of the *Shin Tenri Toshokan Zenpon Sōsho*, based on high-resolution color photography taken after restoration, with commentary by Ōtsuki Makoto. Published by Tenri University Press and distributed by Yagi Shoten.

This edition includes references not only to the original volume and folio numbers, but also to the Old Tenri and Kazama Edition page numbers, enhancing its compatibility with the Kazama indexes.

Renjō-in Manuscript

Previously held at Kōfuku-ji's Renjō-in, this fragmentary manuscript (3 volumes) is now in the possession of Chinkoku Shukoku Shrine (Kuwana City, Mie Prefecture). Copied in the late Kamakura to early Muromachi period, it is also referred to as the Chinkoku Shukoku Shrine Manuscript.

It comprises: Volume 1 (corresponding to *Butsu-jō* and *Butsu-chū* in the Kanchi-in Manuscript); Volume 2 (covering up to mid-*Hō-jō*); and Volume 3 (corresponding to *Sō*). A facsimile edition was issued in 1965 by the Mikkan Kokubun Shiryō Kankōkai under the title *Sanpō Ruiju Myōgishō*, with commentary by Ozaki Satoakira. A clearer reproduction was issued in 1986 by Benseisha.

Kōsan-ji Manuscript

Formerly held at Kōsan-ji and now preserved at the Tenri Central Library via the Hōrei Collection. This manuscript was copied during the Insei period (late Heian).

It consists of two fragmentary volumes corresponding to *Butsu-jō* and *Butsu-chū* of the Kanchi-in Manuscript. The first folio lists section headings under the title *Sanbō Ruiji-shū Kan-jō*, and the main text begins with *Butsuhō Ruiji-shū Kan-jō I / Section 1: Jin*. This corresponds to the entry in the *Kōsan-ji Shōgyō Mokuroku* (Kenchō Inventory), which records *Sanpō Ruiji-shū* as a six-volume work. In 2016, a high-resolution color facsimile was published as Vol. 8 of the *Shin Tenri Toshokan Zenpon Sōsho*, with commentary by Yamamoto Hideto.

Sainen-ji Manuscript

A one-volume fragment transcribed in 1767 (Meiwa 4), based on the Eissatsu Manuscript, preserving portions of *Butsu-jō* and *Butsu-chū*. Now held by both the Tenri Central Library and Kansai University. Although no printed facsimile exists, [images of the Kansai University copy](#) are publicly available.

[A version preserved by the Archives and Mausolea Department of the Imperial Household Agency](#) is also accessible and more closely resembles the Tenri copy than the Kansai University one. While the Tenri copy has often been used in prior scholarship, the lack of a published facsimile once required researchers to visit the library to obtain photographic reproductions. The Shoryōbu copy now allows readers to access the same textual content as the Tenri Sainen-ji Manuscript.

Hōbodai-in Manuscript

A one-volume fragment covering the “Ship” (舟) through “Dog” (犬) sections of *Butsu-ge* in the Kanchi-in Manuscript, likely copied in the late Kamakura period.

A facsimile edition was published in 2002 by Taishō University Press, with commentary by Kurashima Tokihisa. A wakun index compiled by the same scholar was published in 2006 by the same press.

1.10 References

While there are numerous references, the following list focuses on works related to bibliographical studies and source research, presented in chronological order of publication.

Note that the first and last page numbers of each source have been omitted. Additionally, due to the large number of articles by KOBAYASHI Kyoji regarding textual variants among manuscripts of the *Ruiju Myōgishō*, only the earliest and most recent ones are included here; the full list of these articles is given in [Foundational Materials for Annotating Japanese Native Readings \(wakun\)](#).

This list represents the principal works consulted in constructing the *Ruiju Myōgishō* full-text database, and is not intended to be exhaustive.

2 Overview of Published Data

2.1 Introduction

This chapter is part of the Core Documentation. It documents the published KRM data files and how they relate to one another.

This database is a full-text digitization of the Kanchi-in manuscript of the *Ruiju Myōgishō* (abbreviated as KRM), incorporating location information, textual collation, source studies, and more. It is one of the **Hanzi** dictionary databases comprising the **Integrated Database of Hanzi Dictionaries in Early Japan** (abbreviated as HDIC). The terms ‘kanji’ and ‘hanzi’ are explained later.

The Kanchi-in manuscript of the *Ruiju Myōgishō* is a **Hanzi (Chinese character)** dictionary compiled in the twelfth century by a Shingon Buddhist monk. It has long been regarded as an important resource for research in Japanese historical linguistics due to its extensive collection of:

- **Japanese Native Readings (wakun)** that indicate accent (often with **Tone marks**),
- detailed **Phonetic Glosses** on the pronunciation of **Hanzi (Chinese characters)**, and
- comprehensive **Notes on Character Form**, including information on **variant characters (itaiji)**.

Furthermore, its annotations written in literary Chinese—which include **fanqie spellings**, **Semantic Glosses in Chinese** (explaining meanings), and **Notes on Character Form** (detailing glyph forms)—have also garnered attention as valuable materials for the study of Chinese linguistics.

It was first published in March 2022, and in March 2025, a revised edition with specification changes and detailed explanations will be released.

The `hanzi_entry` values represent a normalized scholarly transcription of the manuscript, using Kangxi Dictionary forms where applicable; the `original_entry` column separately preserves each **Headword**’s as-written form, since the headword is the basic unit used for character identification. The `definition` column, by contrast, records only the collated reading of the **Original Glosses**; notable cases are recorded in the `remarks` column of [krm_notes](#). When a research question depends on the precise reading of the manuscript, consult the facsimile editions listed in [Chapter 1: Overview](#).

2.2 Kanji and Hanzi

To bridge the gap between ‘Kanji’ and ‘Hanzi,’ and to facilitate international academic discourse, the following supplementary explanation may be useful:

Dictionaries of Chinese characters compiled in Japan during the Heian period are invaluable resources not only for the study of Japanese linguistics but also for the study of

Chinese linguistics. To promote international accessibility, we propose using the term ‘Hanzi.’ Researchers specializing in Japanese studies may, without any issue, read this term as ‘Kanji.’ This approach aims to respect the linguistic diversity and academic traditions of both fields, while encouraging broader scholarly exchange.

This explanation aims to provide clarity and respect for both terminologies, ensuring that researchers from different backgrounds can engage with the material without linguistic barriers.

For these reasons, ‘hanzi’ is used for the column names of the public data, while ‘kanji’ is used in the explanatory text.

2.3 List of Data Files

The data for the Kanchi-in manuscript of the *Ruiju Myōgishō*, available at <https://github.com/shikeda/krm>, is as follows. This list includes some files that are currently under preparation for public release.

- **[krm main](#)**: Basic data. Includes information on **Headwords**, the full text of **Definition (Original Glosses)**, locations, etc. TSV and JSON files are available.
- **[krm notes](#)**: Data for the **Compiler's Remarks**. This comprises analyses of **Headwords**, **Notes on Character Form**, **Phonetic Glosses**, **Semantic Glosses in Chinese**, **Japanese Native Readings (wakun)**, and **Other** elements from the *Myōgishō*, including results of textual collation and source investigation. TSV and JSON files are available.
- **[krm headword chars](#)**: Detailed information about all **Headwords**. Includes location in the Kazama edition, location in the Tenri edition, image file names, etc.
- **[krm wakun](#)**: **Japanese Native Reading (wakun)** data. Includes information about variant forms of *wakun*, variant forms of **Hanzi (Chinese characters) (itaiji)**, and correspondence with the “Notation” field of the *Nihon Kokugo Daijiten* (Second Edition). TSV and JSON files are available.
- **[krm definitions](#) (deprecated)**: Previously provided the elements of the **Definition (Original Glosses)** of the *Myōgishō*, categorized by type. Following the March 2025 specification change, the data and functionality of `KRM_definitions.tsv` were merged into [krm notes](#), which lists the corresponding old and new column names.
- **[krm pronunciations](#)**: Data to facilitate linkage with the DHSJR regarding **Phonetic Glosses** (under preparation).
- **[krm ndl](#)**: Links to the National Diet Library Digital Collections. TSV file available. This is the same as the previously published [KRM ndl.tsv](#).

A major revision of the data specifications was implemented in March 2025. Previously, published files were prefixed with “KRM” (uppercase). Files released after this revision are prefixed with “krm” (lowercase).

2.4 Specification Change

The key points of these specification changes are as follows:

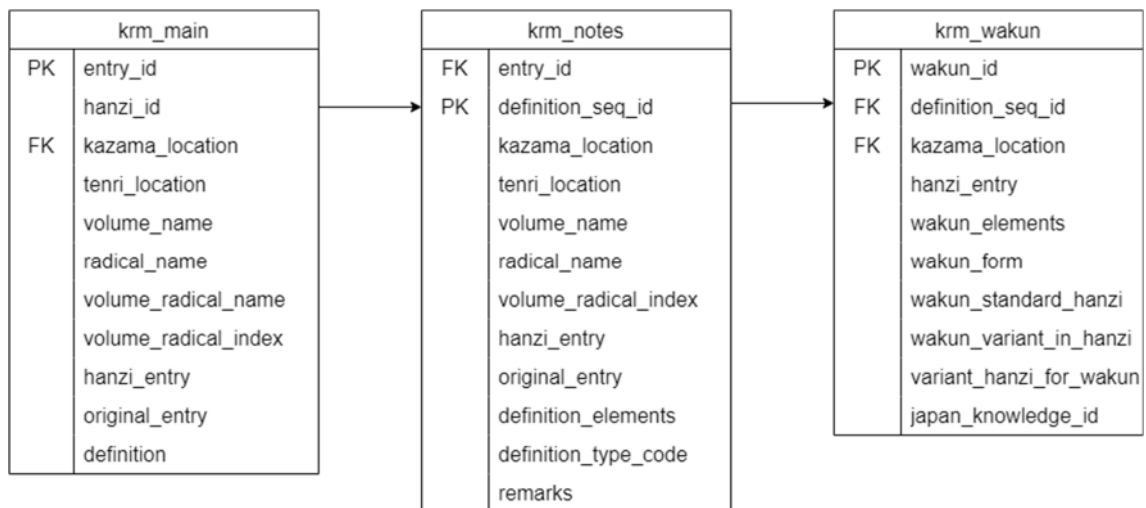

- The at mark “@”, used to indicate that a *kana wakun* (a Japanese Native Reading written in kana) does not have **Tone marks**, has been changed to an underscore “_”.
- The double quotation mark “””, used to indicate that a *wakun* for a voiced sound is accompanied by **Tone marks**, has been changed to the half-width English letter “V”.
- Half-width parentheses “()”, used to indicate the presence of **Tone marks**, have been changed to full-width parentheses “ () ”.
- Half-width parentheses “()”, used to indicate a proposed correction for a typographical error, have been changed to full-width square brackets “ [] ”.
- Half-width square brackets “[]”, used to indicate missing characters, have been changed to full-width square brackets “ [] ”.

The files after the specification change have been published at

<https://github.com/shikeda/krm>.

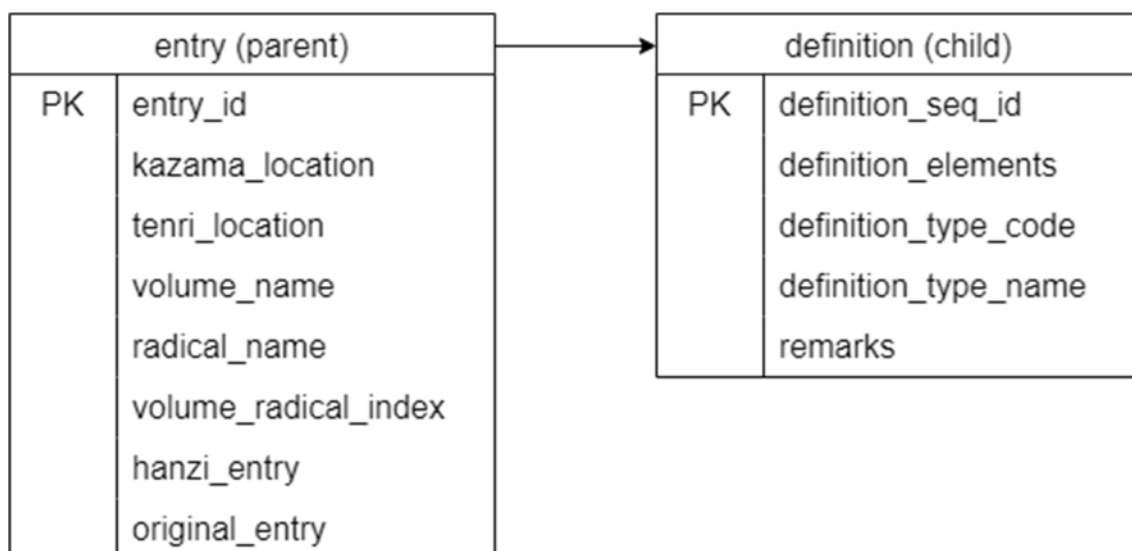

2.5 ER Diagram

The following ER diagram shows the relationship between the three tables: `krm_main`, `krm_notes`, and `krm_wakun`.

ER diagram.

Please note that the `krm_notes.json` file has a nested structure: each record contains an array of definitions rather than a flat list of rows. For more details on the internal structure of `krm_notes.json`, see the [dedicated page](#).

ER_notes diagram

2.6 Common Information

For details including the version of the released data, author information, and copyright notices, please refer to the `README.md` file in the following GitHub repository.

<https://github.com/shikeda/krm/>

2.7 Acknowledgments

We would like to express our gratitude to Tenri Central Library and Yagi Bookstore for granting permission to publish the decipherment text of the Kanchi-in manuscript of the *Ruiju Myōgishō*.

This research is partly supported by JSPS KAKENHI Grant Numbers 16H03422, 19H00526, 23K17500, 25K00466 and 26K21717. We gratefully acknowledge this support.

2.8 krm_main

2.8.1 Overview and file formats

This section describes the core files of the database for the Kanchi-in manuscript of the *Ruiju Myōgishō* (hereinafter “*Myōgishō*”).

Previously, the released file was a TSV file named `KRM.tsv`.

It contains information regarding **Headwords**, the full content of the **Definition (Original Glosses)**, volume, radical, and the locations in the Kazama Shobō edition and the Tenri Central Library/Yōtokusha (Tenri Zenhon Sōsho) edition.

In March 2025, the specifications for column names and the display method for **Tone marks (*shōten*)** were updated. To clearly indicate that it is the file with these updated

specifications, it was renamed `krm_main.tsv`. A JSON version of this file has also been made available.

2.8.2 Column name comparison

The correspondence between the old and new column names is as follows:

New Column Name (v1.2.5)	Old Column Name (v1.1.347)
entry_id	KRID_n
hanzi_id	KRID_sn
-	KR2ID
kazama_location	KRID
tenri_location	KR_Tenri_p
volume_name	KR_vol_name
radical_name	KR_radical
volume_radical_index	KR_vol_radical
hanzi_entry	Entry
original_entry	Entry_original
definition	Def
-	Remarks

The KR2ID column was omitted, and the kazama_location column was aligned with the KRID column.

The Remarks column was omitted; this information is now consolidated in the `krm_notes` file (which contains data for the **Compiler's Remarks**).

2.8.3 Description of each column

The content of each column (v1.2.5) is explained below.

New Column Name (v1.2.5)	Explanation
entry_id	A heading Entry ID consisting of a 5-digit numeric ID starting with 'F'. For some added entry items, a 'b' suffix is appended.
hanzi_id	A heading Hanzi (Chinese character) ID consisting of a 5-digit numeric ID starting with 'S'. For some added entry items, a 'b' suffix is appended.

New Column Name (v1.2.5)	Explanation
kazama_location	An ID indicating K + Volume (2 digits) + Kazama Edition Page (3 digits) + Line (1 digit) + Segment (1 digit) + Character order (字順, <i>jijun</i>) (1 digit). Details of the rules for assigning Character order are defined separately.
tenri_location	An ID indicating T + Volume (a/b/c) + Tenri Edition Page (3 digits) + Line (1 digit) + Segment (1 digit) + Character order (字順, <i>jijun</i>) (1 digit). Details of the rules for assigning Character order are defined separately.
volume_name	Name of the volume, consisting of 10 volumes: 仏上, 仏中, 仏下本, 仏下末, 法上, 法中, 法下, 僧上, 僧中, and 僧下.
radical_name	Name of the radical, consisting of 120 radicals ranging from 人 to 雜, used to classify Hanzi (Chinese characters) .
volume_radical_index	Volume and radical number, ranging from v1#1 (Volume 1, Radical 1) to v10#120 (Volume 10, Radical 120), indicating the location of the Entry within the text. (Corresponds to 第 1 帖 仏上 to 第 10 帖 僧下).
hanzi_entry	The collated Headword (校訂漢字) principally uses Kangxi Dictionary form, including Unicode simplified Chinese characters (common-use forms, popular variants). For Chinese characters not included in Unicode, they are represented by the following methods: If representable by combining Chinese character components, input using IDS (Ideographic Description Sequence). For specific Chinese characters or their components, if representation by IDS or standard Unicode is difficult, use simplified notations based on the entity reference systems of CHISE and GlyphWiki (e.g., CDP-8C55, koseki-00001). Chinese characters not representable by any of the above methods, or characters unreadable in the original text (due to damage such as wormholes, etc.), are input as '■' (black square). Headwords consisting of multiple Chinese characters are separated by '／' (full-width slash). The abbreviation symbol '丨' is indicated by '一' (long vowel mark), and the corresponding character is appended in full-width parentheses ().
original_entry	Headword based on the original character form. Typographical errors in the original are preserved. The representation of Chinese characters outside Unicode follows the rules for hanzi_entry . If the

New Column Name (v1.2.5)	Explanation
	original-form Headword is not needed, ‘○’ is used.
definition	The content of this definition column represents the Definition (Original Glosses) . It includes Notes on Character Form , Phonetic Glosses , Semantic Glosses in Chinese , Japanese Native Readings (*wakun*) , and Other relevant information, separated by spaces. As a general rule, character forms included in the “Kangxi Dictionary style” should be used.

2.9 krm_notes

2.9.1 Overview and file formats

A new file, `krm_notes.tsv`, has been created, containing detailed annotation information added to the `KRM_definitions.tsv` file.

This is available in both TSV and JSON formats. To explicitly indicate that these are the filenames after the specification change in March 2025, lowercase “krm” was used instead of uppercase “KRM,” resulting in the names `krm_notes.tsv` and `krm_notes.json`.

2.9.2 Column name comparison

This section compares the column names in the new `krm_notes.tsv` (v1.2.6) with those in the previous files it replaces or incorporates data from.

2.9.2.1 Comparison with *KRM_definitions.tsv* (v1.1.55)

The following table shows the correspondence between columns primarily related to definition details derived from the previous definitions file:

New Column Name (krm_notes v1.2.6)	Old Column Name (KRM_definitions v1.1.55)
definition_seq_id	KRID_no
kazama_location	KRID
hanzi_entry	Entry
definition_elements	Def
definition_type_code	Def_code
definition_type_name	Def_name
remarks	Remarks

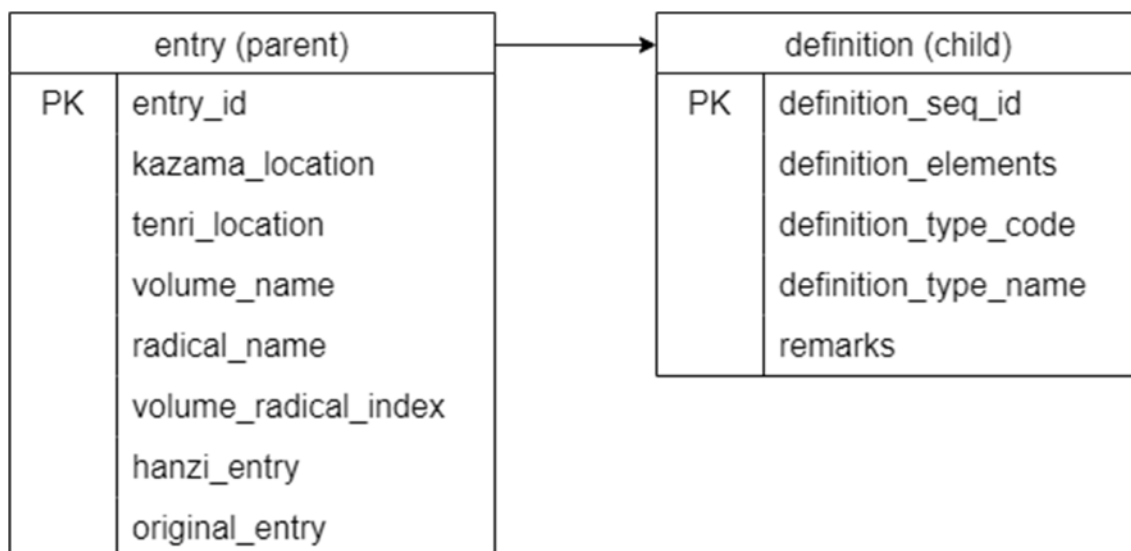

2.9.2.2 Incorporation of KRM.tsv (v1.1.347) content

The new `krm_notes.tsv` also incorporates information previously stored in `KRM.tsv`. The corresponding column names are compared below:

New Column Name (krm_notes v1.2.6)	Old Column Name (KRM v1.1.347)
entry_id	KRID_n
tenri_location	KR_Tenri_p
volume_name	KR_vol_name
radical_name	KR_radical
volume_radical_index	KR_vol_radical
original_entry	Entry_original

2.9.3 Data Structure: ER Diagram and JSON Implementation

The JSON representation of `krm_notes` utilizes a nested format, as detailed below.

ER_notes diagram

In the **ER diagram**, the `krm_notes` table is shown as a child table linked to `krm_main` (as detailed in the [krm_main section](#)) by `entry_id`. However, in the **actual JSON data**, the equivalent of the `krm_notes` table is not flat: instead, it is implemented as a **nested array of objects** under the key "definitions" within each top-level record (referred to as a `krm_main` conceptual record).

Each object inside the `definitions` array corresponds to a definition note and contains the following fields:

- `definition_seq_id`
- `definition_elements`

- `definition_type_code`
- `definition_type_name`
- `remarks`

This structure can be conceptually represented in the ER diagram as follows:

- The `krm_main` table has a **one-to-many relationship** with a conceptual `definitions` or `notes` table.
- In the JSON representation, the **definitions are embedded as an array of objects** within each `krm_main` object, rather than being stored in a separate flat table.

Example JSON:

```
{
  "entry_id": "F00001",
  ...
  "definitions": [
    {
      "definition_seq_id": "F00001_01",
      "definition_elements": "音仁 (LV) 「ニン」",
      "definition_type_code": 215,
      "definition_type_name": "音注声点有_類音注等",
      "remarks": "広韻「如鄰切」..."
    },
    ...
  ]
}
```

2.9.4 Description of each column

Next, the content of the column names will be explained.

New Column Name (v1.2.6)	English Explanation
<code>entry_id</code>	A heading Entry ID consisting of a 5-digit numeric ID starting with 'F'. For some newly added Entries , a 'b' suffix is appended.
<code>definition_seq_id</code>	An identifier for each component of the Definition (Original Glosses) or for the Headword itself within an Entry . It is formed by appending a sequential suffix (e.g., "_00" for the Headword or overall Entry note, "_01", "_02" for subsequent elements of the Definition (Original Glosses) in order of appearance) to the 5-digit numeric part of the corresponding <code>entry_id</code> .
<code>kazama_location</code>	An ID indicating K + Volume (2 digits) + Kazama Edition Page (3 digits) + Line (1 digit) + Segment (1 digit) + Character order (字順, <i>jijun</i>) (1 digit). Details of the rules for assigning Character order are defined separately.

New Column Name (v1.2.6)	English Explanation
tenri_location	An ID indicating T + Volume (a/b/c) + Tenri Edition Page (3 digits) + Line (1 digit) + Segment (1 digit) + Character order (字順, <i>jijun</i>) (1 digit). Details of the rules for assigning Character order are defined separately.
volume_name	Name of the volume, consisting of 10 volumes: 仏上, 仏中, 仏下本, 仏下末, 法上, 法中, 法下, 僧上, 僧中, and 僧下.
radical_name	Name of the radical, consisting of 120 radicals ranging from 人 to 雜, used to classify Hanzi (Chinese characters) .
volume_radical_index	Volume and radical number, ranging from v1#1 (Volume 1, Radical 1) to v10#120 (Volume 10, Radical 120), indicating the location of the Entry within the text. (Corresponds to 第 1 帖仏上 to 第 10 帖僧下).
hanzi_entry	The collated Headword (校訂漢字) principally uses Kangxi Dictionary form, including Unicode simplified Chinese characters (common-use forms, popular variants). For Chinese characters not included in Unicode, they are represented by the following methods: If representable by combining Chinese character components, input using IDS (Ideographic Description Sequence). For specific Chinese characters or their components, if representation by IDS or standard Unicode is difficult, use simplified notations based on the entity reference systems of CHISE and GlyphWiki (e.g., CDP-8C55, koseki-00001). Chinese characters not representable by any of the above methods, or characters unreadable in the original text (due to damage such as wormholes, etc.), are input as '■' (black square). Headwords consisting of multiple Chinese characters are separated by '／' (full-width slash). The abbreviation symbol '丨' is indicated by '—' (long vowel mark), and the corresponding character is appended in full-width parentheses ().
original_entry	Headword based on the original character form. Typographical errors in the original are preserved. The representation of Chinese characters outside Unicode follows the rules for hanzi_entry . If the original-form Headword is not needed, '○' is used.
definition_elements	Extracted individual elements from the full Definition (Original Glosses) , classified into five types: Notes on Character Form , Phonetic Gloss , Semantic Gloss in Chinese , Japanese Native

New Column Name (v1.2.6)	English Explanation
	Reading (*wakun*), and Other information. Each record in <code>krm_notes</code> typically corresponds to one such extracted element.
<code>definition_type_code</code>	A 3-digit numeric code representing the type of element from the Definition (Original Glosses) .
<code>definition_type_name</code>	Indicates which of the five following categories the element from the Definition (Original Glosses) belongs to: Notes on Character Form , Phonetic Gloss , Semantic Gloss in Chinese , Japanese Native Reading (*wakun*), or Other information.
<code>remarks</code>	Compiler's Remarks : Notes by the database compilers providing additional context, scholarly observations, results of textual collation, or source investigations related to the specific <code>definition_element</code> or Headword.

2.9.5 Content and Significance of Compiler's Remarks (the remarks Column)

Please note that this `remarks` column stores the **Compiler's Remarks** (annotations by the database creators).

The `remarks` column provides the following types of information:

- **Additional context**: Supplementary background or related information that aids in understanding the *Myōgishō*'s entries.
- **Scholarly observations**: Philological, linguistic, or other expert perspectives on specific descriptions, including references to previous research.
- **Results of textual collation**: Findings from comparisons with variant manuscripts or related materials, and textual interpretations based on these collations.
- **Source investigations**: Results and considerations regarding the textual sources of the *Myōgishō*'s entries, including references to findings from previous studies.

These remarks are each associated with one of the following specific parts of a *Myōgishō* **Entry**:

- A specific `definition_element` (an individual component of the **Definition (Original Glosses)**): This refers to a distinct element within the *Myōgishō*'s original annotation for an **Entry** (such as a particular **Note on Character Form**, **Phonetic Gloss**, **Semantic Gloss in Chinese**, or **Japanese Native Reading** (*wakun*)), as itemized in the `krm_notes` file.
- Or the **Headword**: The main character(s) of the **Entry**.

In essence, the `remarks` column serves to provide specialized, supplementary information from the database compilers, enabling a deeper understanding and facilitating further research that goes beyond what can be gleaned from the *Myōgishō*'s main text and original glosses alone.

2.10 krm_headword_chars

2.10.1 Overview and file formats

Headwords in the *Myōgishō* can consist of single **Chinese characters** or multiple **Chinese characters** (multi-character compounds). The `krm_headword_chars` data file provides a list of all **constituent characters that form these Headwords** from the *Myōgishō*. The characters are ordered according to the sequence of **Entries** (items) in the *Myōgishō* and then by the order of appearance of characters within each **Headword**.

In the *Myōgishō* database, the primary data file `krm_main`, the `krm_notes` file (containing data for **Compiler's Remarks**), and the `krm_wakun` file (**Japanese Native Reading (*wakun*)** data) are all structured on an **Entry-by-Entry** basis. Consequently, for **Headwords** composed of multiple **Chinese characters**, any character subsequent to the first cannot be directly referenced from these particular data files.

To search for **Headwords** from the *Myōgishō* character by character, display their original manuscript images, or perform analyses at the individual **Chinese character** level, a complete list of all constituent characters of the **Headwords**, including those from the second character onwards in multi-character compounds, is necessary.

The `krm_headword_chars` data file was created for this purpose. This data is provided in TSV and JSON formats. Each row (or record) corresponds to a single constituent character of a **Headword** and includes information such as: the sequential ID of the **Headword** (single or multi-character) in the *Myōgishō* to which the constituent character belongs (`hanzi_id`); the ID of the *Myōgishō* **Entry** to which this character's **Headword** belongs (`entry_id`); the order of the character within its **Headword** (`character_order`); the character itself (`constituent_char`); the file name of the individually cropped image for the character (`img_file_name`); and location information for that character in both the Kazama and Tenri editions (`kazama_location_id`, `tenri_location_id`). This enables information access at the individual character level while allowing linkage with **Entry**-based data files such as `krm_main`.

2.10.2 Description of each column

The column names and their descriptions for `krm_headword_chars` are as follows:

Column Name	English Explanation
<code>hanzi_id</code>	A sequential ID assigned to each Headword (whether single or multi-character) in the order of its appearance in the <i>Myōgishō</i> . It consists of a 5-digit numeric ID starting with 'S'.
<code>entry_id</code>	The ID of the Entry (from <code>krm_main</code>) to which the Headword (containing this constituent character) belongs. This ID is a 5-digit numeric value starting with 'F'. For some newly added Entries , a 'b' suffix is appended.

Column Name	English Explanation
constituent_char	The constituent Chinese character itself. Abbreviation marks (一) and iteration marks (𐄂) are converted to the actual characters they represent. Collated Chinese characters are, in principle, Kangxi Dictionary forms; the handling of Unicode new character forms (common-use forms, popular variants) is specified separately. For detailed collation notes, refer to <code>krm_notes</code> (for Compiler's Remarks on collation).
character_order	Indicates the numerical order of appearance of the character within its Headword .
kazama_location_id	An ID indicating the location of this constituent character in the Kazama Edition: K + Volume (2 digits) + Page (3 digits) + Line (1 digit) + Segment (1 digit) + Character Order in Segment (1 digit).
tenri_location_id	An ID indicating the location of this constituent character in the Tenri Edition: T + Volume (a/b/c) + Page (3 digits) + Line (1 digit) + Segment (1 digit) + Character Order in Segment (1 digit).
img_file_name	File name of the image for the constituent Headword character (including the .jpg extension). The main part of the file name consists of a 7-digit number for images from Volume 1 to Volume 9, and an 8-digit number for images from Volume 10. For 7-digit numbers, the first digit indicates the volume number; for 8-digit numbers, the first two digits indicate Volume 10. The last 6 digits are based on the order of appearance, assigned according to a unique internal rule. Detailed documentation for this naming convention is not available as the work was completed over two decades ago. Null if no image is available.

2.11 krm_wakun

2.11.1 Overview and file formats

This data file is derived by extracting **Japanese Native Readings (*wakun*)** from the `KRM.tsv` file (an older version of `krm_main`) of the *Myōgishō* database, organizing variant forms of these **wakun**, and adjusting their correspondence with **variant characters (*itaiji*)**.

Collation notes and source investigations related to **wakun** are documented in the `krm_notes` file (which contains data for **Compiler's Remarks**), so they are omitted here.

In some **wakun** entries, different phonetic readings are presented side-by-side as annotations. For example, the **wakun** “マサル” (masaru) is assigned to the **Hanzi (Chinese character)** “倍” (bai), but “ス” (su) is written in small katakana to the right of “ル” (ru) as

an additional note. This indicates that the **wakun** “マス” (masu) is also noted in addition to “マサル” (masaru).

Since information from the JapanKnowledge version of the *Nihon Kokugo Daijiten* (Second Edition) will be added to the **wakun** data, it is necessary to accommodate cases where variant forms of **wakun** are presented together.

The correspondence with **variant characters** (*itaiji*) has been adjusted because **Headwords** in the *Myōgishō* sometimes indicate such variants. For example, the **wakun** “ヤツカレ” (yatsukare) appears in the **Definition (Original Glosses)** for the **Headword(s)** “僕／僕”. The **wakun** “ヤツカレ” is a **Japanese Native Reading** for “僕” (boku) and simultaneously for “僕”. The relationship between standard and variant forms such as “爲” and “為”, or “來” and “来” is handled similarly.

The JapanKnowledge version of the *Nihon Kokugo Daijiten* (Second Edition) has a “Notation” (表記) field that includes **Hanzi (Chinese character)** notations from the *Myōgishō*; this adjustment is a measure to ensure correspondence with that resource.

To explicitly indicate that these are the filenames after the specification change in March 2025, lowercase “krm” was used instead of uppercase “KRM,” resulting in the names **krm_wakun.tsv** and **krm_wakun.json**.

2.11.2 Column name comparison

The comparison of the new and old column names is as follows:

New Column Name (v1.2.0)	Old Column Name (v1.1.97)
wakun_id	KRID_wakun_no
definition_seq_id	KRID_no
kazama_location	KR2ID
hanzi_entry	Entry
wakun_elements	Def
wakun_form	Word_form
wakun_standard_hanzi	Wakun_Hanzi
wakun_variant_in_hanzi	Wakun_variant
variant_hanzi_for_wakun	Hanzi_variant
japan_knowledge_id	JK_URL

New Column Name (v1.2.0)	Old Column Name (v1.1.97)
-	Remarks

Remarks have been omitted as this type of information is now consolidated in the `krm_notes` file (data for **Compiler's Remarks**).

2.11.3 Description of each column

Next, the content of the column names will be explained.

New Column Name (v1.2.0)	English Explanation
wakun_id	An ID for each Japanese Native Reading (*wakun*) . This is derived from <code>definition_seq_id</code> by extracting only those elements where the type (from <code>definition_type_name</code> in <code>krm_notes</code>) is Japanese Native Reading (*wakun*) . Suffixes 'b', 'c', 'd' are appended for variant forms.
definition_seq_id	An identifier for each component of the Definition (Original Glosses) or for the Headword itself within an Entry . It is formed by appending a sequential suffix (e.g., "_00" for the Headword or overall Entry note, "_01", "_02" for subsequent elements of the Definition (Original Glosses) in order of appearance) to the 5-digit numeric part of the <code>entry_id</code> . (This ID links to records in <code>krm_notes</code>).
kazama_location	ID including location information (Kazama edition: K, Book/volume, page(xxx), line(y), column(zz)), ranked 1, 2, ..., n for multiple Entries in a column. "Book(volume)" represents the volume number, "page(xxx)" the page number, "line(y)" the line number, and "column(zz)" the column number.
hanzi_entry	The collated Headword (using Hanzi (Chinese characters)) to which this Japanese Native Reading (*wakun*) pertains. Principally Kangxi Dictionary forms, though Unicode-representable new forms (common-use, popular variants) may be retained.
wakun_elements	Extracted elements of Japanese Native Readings (*wakun*) from the full Definition (Original Glosses) . Each record typically corresponds to one such element.
wakun_form	The lexical form of the Japanese Native Reading (*wakun*) . Inflected words are generally given in their dictionary (citation) form, excluding grammatical particles. The particles 'no' and 'to' from <i>Monzen</i> (文選) style readings are omitted.

New Column Name (v1.2.0)	English Explanation
wakun_standard_hanzi	Notation of the Japanese Native Reading (*wakun*) using standard Hanzi (Chinese characters) .
wakun_variant_in_hanzi	Notation of a variant form of the Japanese Native Reading (*wakun*) using standard Hanzi (Chinese characters) .
variant_hanzi_for_wakun	Notation of the Japanese Native Reading (*wakun*) using variant characters (*itaiji*) of Hanzi (Chinese characters) .
japan_knowledge_id	If this Japanese Native Reading (*wakun*) exists as a headword in the JapanKnowledge version of the <i>Nihon Kokugo Daijiten</i> (2nd Ed.), the alphanumeric part of its URL (from “20020” to the end) is recorded here. If it does not exist as a headword, “null” is entered.

2.12 krm_pronunciations

2.12.1 Overview and file formats

The **Phonetic Glosses** in the Kanchi-in manuscript of the *Ruiju Myōgishō* (hereafter *Myōgishō*) include **Fanqie spellings** (反切), **Similar sound notes** (類音注, *ruion-chū*), and **Kana glosses** (仮名注, *kana-chū*). These are often accompanied by **Tone marks** (声点, *shōten*). As a database for Sino-Japanese pronunciations, the “**Database of Historical Sino-Japanese Readings**” (abbreviated as DHSJR), developed by Professor Katō Daikaku and others, offers exceptionally rich content. Its specifications are also publicly available in detail. Accordingly, as part of the HDIC project, we have decided to release data in accordance with the DHSJR specifications.

The DHSJR defines a data structure with 23 column names.

To facilitate linkage with the *Myōgishō* data included in HDIC, it is necessary for HDIC to assign unique column names to its own data files and to establish Primary Keys and Foreign Keys for interoperability between HDIC’s internal data files.

For this purpose, **pronunciation_id** (音注 ID) has been set as the Primary Key, and **definition_seq_id** (注文 ID) as the Foreign Key.

Since the *Myōgishō* features diverse formats for its **Phonetic Glosses**, a classification field named **annotation_format** (音注型) has been established to categorize them.

While DHSJR uses Japanese column names, HDIC employs English ones. Therefore, for data processing convenience within HDIC, English column names have been adopted.

2.12.2 Column name comparison

The current draft, with English and Japanese explanations side-by-side, is as follows. The Japanese explanations are those stipulated by DHSJR. The English explanations are formulated to facilitate correspondence with HDIC. This is a provisional measure until official English explanations are released by DHSJR.

HDIC's original column names are indicated in **bold**.

DHSJR (Japanese)	HDIC (English)	Key	English Explanation	Japanese Explanation (from DHSJR)
ID	dhsjr_id		DHSJR unique ID for each single Hanzi (Chinese character) (integrated data only)	単字ごとのユニーク ID (統合データのみに)
音注 ID	pronunciation_id	Primary Key	ID for each Phonetic Gloss . This is derived from definition_seq_id by extracting only those elements where the type (from definition_type_name in krm_notes) is Phonetic Gloss . Suffixes 'b', 'c', 'd' are appended for variant forms.	音注 ID。 kr_definition_sequence_id から、注文の種類が音注のものだけを取り出したもの。変異形を追加したものには末尾に b, c, d を付した。
注文 ID	definition_seq_id	Foreign Key	An identifier for each component of the Definition (Original Glosses) or for the Headword itself within an Entry . It is formed by appending a sequential suffix (e.g., "_00" for the Headword , "_01", "_02" for subsequent	連番で与えられる F で始まる 5 桁の見出しの数値 ID に加えて、見出しの下に記される注文の各要素を出現順に区分し、出現の順番に_01、_02 のように追加したもの。見出しには

DHSJR (Japanese)	HDIC (English)	Key	English Explanation	Japanese Explanation (from DHSJR)
			elements) to the corresponding entry_id.	_00 を追加する。
資料番号	material_id		Material ID	資料 ID
資料名	material_name		Name of the material	資料の名称
資料内漢 字番号	material_character_in dex		Sequential number of a Hanzi (Chinese character)'s appearance in the material	漢字の資料内出現順 の通し番号
資料内漢 語番号	material_word_index		Sequential number of a Chinese word's appearance in the material	漢語の資料内出現順 の通し番号
単字_見 出し	character_headword		Headword column for Hanzi (Chinese characters) with Phonetic Glosses	音注が付された漢字 の見出し列
単字_出 現形	character_form		Hanzi (Chinese characters) that have Phonetic Glosses	音注が付された漢字
漢語_見 出し	word_headword		Headword column of Chinese words containing Hanzi (Chinese characters) with Phonetic Glosses	音注が付された漢字 を含む漢語の見出し 列
漢語_出 現形	word_form		Chinese words containing Hanzi (Chinese characters) with Phonetic Glosses	音注が付された漢字 を含む漢語
漢語	word_alpha		Entered when there is an alphabetic	欧文による漢語の表

DHSJR (Japanese)	HDIC (English)	Key	English Explanation	Japanese Explanation (from DHSJR)
_alphabet			representation of the Chinese word	記がある場合に入力 されている。
語種	word_type		Indicates the word type when there are mixed-language words (e.g., hybrid Sino-Japanese words)	混種語がある場合 に、語種を示す。
漢語内位 置	word_position		Position of the single Hanzi (Chinese character) within the Chinese word	漢語内での単字の位 置
単字長	character_mora_count		Number of morae for the single Hanzi (Chinese character)	単字の拍数
声点	tone_marks		Tone marks for single Hanzi (Chinese characters) , indicating Four Tones (平上去入), Six Tones (平平輕上 去入輕入), and voicing (清濁).	単字に対する四声 (平上去入)、六声 (平平輕上去入輕 入) 及び清濁。
声点型	tone_pattern		Combination of Tone marks for Chinese words. Hanzi (Chinese characters) without Tone marks are represented by a full-width asterisk (*).	漢語に対する声点の 組合せ。声点がない 単字については*で 表す。
仮名注	kana_notes		Kana glosses (仮名	仮名表記による字音

DHSJR (Japanese)	HDIC (English)	Key	English Explanation	Japanese Explanation (from DHSJR)
			注) for Hanzi (Chinese characters), including kana-based <i>fanqie</i> .	注 (仮名反切を含む)
仮名型	kana_pattern		Combination of Kana glosses for Chinese words. Hanzi (Chinese characters) without Kana glosses are represented by a full-width asterisk (*).	漢語に対する仮名注の組合せ。仮名注がない単字については*で表す。
反切	fanqie		Fanqie spellings (反切) for single Hanzi (Chinese characters).	単字に対する反切注
類音	similar_sound		Similar sound notes (類音注) for single Hanzi (Chinese characters).	単字に対する類音注
音注型	annotation_format		Pattern of combined phonetic information (e.g., Kana glosses , Fanqie spellings , Similar sound notes , Tone marks).	仮名注、反切、類音、声点などの複数の音注が組み合わさった形式のパターン。
節博士	fushi_hakase		Fushi-hakase notations (melodic or intonational markings) attached to musical materials such as <i>Shōmyō</i>	声明等音楽資料に付される博士譜など

DHSJR (Japanese)	HDIC (English)	Key	English Explanation	Japanese Explanation (from DHSJR)
			(Buddhist chant).	
その他	other_phonetic_annotations		Other types of Phonetic Glosses .	その他の音注
出現位置	material_location		Location of single Hanzi (Chinese characters) and Chinese words within the material.	資料内の単字・漢語の所在
備考	remarks_pronunciation		Matters to be noted regarding these phonetic elements.	注記すべき事柄

The `material_location` is indicated in the format: K + Volume (2 digits) + Kazama Edition Page (3 digits) + Line (1 digit) + Segment (1 digit). For example, `K0201474` indicates an appearance in Volume 2, Page 14, Line 7, Segment 4.

2.12.3 Collaboration with DHSJR

Collaboration with DHSJR proceeded as follows.

- The DHSJR project aims to make Sino-Japanese character and word readings, from the Heian–Kamakura periods through the present, cross-searchable based on annotations such as **Kana glosses**, **Tone marks**, and **Fanqie spellings**. It is led by Professor Katō Daikaku of Waseda University.
- To include the *Myōgishō* in DHSJR, **Phonetic Glosses** were extracted from KRM's full-text data (`krm_main.tsv` and `krm_notes.tsv`) and matched against DHSJR's requirements.
- Each of DHSJR's 23 defined data columns (e.g., character headword, **Tone marks**, **Kana glosses**, **Fanqie spellings**, **Similar sound notes**, material location) was individually mapped to the corresponding KRM data items.
- Discussions with Professor Katō Daikaku and other DHSJR members began on February 17, 2025; following review and verification by DHSJR, the data was published on September 10, 2025, under resource ID `30-048-02` (filename `30-048-02_RMK`).
- From June 23 to July 12, 2026, the DHSJR-provided data was reviewed and refined; this work is recorded in the [DHSJR repository's commit history](#).

These details, along with issues identified while preparing the data, are compiled as Supporting Documentation in the case study “[Linkage with DHSJR](#),” which includes many explanations useful for using KRM as a resource for Sino-Japanese phonological history.

2.13 krm_ndl

This file compiles links to the images of the Kanchi-in manuscript of the *Ruiju Myōgishō* that are publicly available in the National Diet Library Digital Collections.

This data cross-references the locations within the Kanchi-in manuscript of the *Ruiju Myōgishō* with their corresponding URLs in the National Diet Library Digital Collections. The file name is `krm_ndl.tsv`.

This data indicates the volume name, radical character, Kazama edition page number, Tenri edition page number, and the URL for the National Diet Library Digital Collections.

Next, a sample of the beginning of the data is shown below.

Book	Radical	Kazama	Tenri	NDL_url
仏上	人	1	23	https://dl.ndl.go.jp/info:ndljp/pid/2586891/6
仏上	人	2	24	https://dl.ndl.go.jp/info:ndljp/pid/2586891/7

2.13.1 Integration with krm_main

To integrate with `krm_main`, you can ask the following questions using generative AI tools like ChatGPT or Gemini to get appropriate answers. While the instructions here are to use Excel, if you wish to process the data with Python, simply replace Excel with Python.

Below are examples of questions and answers for ChatGPT.

2.13.1.1 Questions

How can I join the `krm_main.tsv` and `krm_ndl.tsv` files in Excel using the `kazama_location` column in `krm_main.tsv` and the `Kazama` column in `krm_ndl.tsv`? Please also include the following mapping:

- “仏上” → “K01”
- “仏中” → “K02”
- “仏下本” → “K03”
- “仏下末” → “K04”
- “法上” → “K05”
- “法中” → “K06”
- “法下” → “K07”
- “僧上” → “K08”
- “僧中” → “K09”
- “僧下” → “K10”

Here are the sample data for the files:

2.13.1.1.1 *Sample krm_main.tsv:*

ent ry_i d	han zi_i d	kazama _locatio n	tenri_l ocatio n	volum e_nam e	radica l_nam e	volume_ra dical_inde x	hanzi _entr y	origin al_entr y	defi nitio n

2.13.1.1.2 *Sample krm_ndl.tsv:*

Book	Radical	Kazama	Tenri	NDL_url
仏上	人	1	23	https://dl.ndl.go.jp/info:ndljp/pid/2586891/6

Book	Radical	Kazama	Tenri	NDL_url
仏上	人	2	24	https://dl.ndl.go.jp/info:ndljp/pid/2586891/7
仏上	人	3	25	https://dl.ndl.go.jp/info:ndljp/pid/2586891/7

2.13.1.2 **Answers**

To join the `krm_main.tsv` and `krm_ndl.tsv` files in Excel using the `kazama_location` column in `krm_main.tsv` and the `Kazama` column in `krm_ndl.tsv`, follow these steps:

1. **Prepare the Data:**

- Import both the `krm_main.tsv` and `krm_ndl.tsv` files into Excel as separate sheets. Name them `krm_main` and `krm_ndl`.

2. **Create a Mapping Table:**

- Create a new sheet (for example, named "Mapping") to include the mapping between `kazama_location` and `Kazama` codes. Use the following mapping:

kazama_location	Kazama
仏上	K01
仏中	K02
仏下本	K03
仏下末	K04
法上	K05
法中	K06
法下	K07
僧上	K08
僧中	K09
僧下	K10

3. **Lookup the Kazama Code:**

- In the `krm_main` sheet, add a new column (e.g., "Kazama Code").
- Use the `VLOOKUP` function to lookup the value in `kazama_location` and return the corresponding `Kazama` code from the "Mapping" sheet.

Enter the following formula in the new column (e.g., G2):

```
=VLOOKUP(D2, Mapping!$A$2:$B$11, 2, FALSE)
```

- D2 is the cell in the `kazama_location` column in the `krm_main` sheet.
- `Mapping!$A$2:$B$11` refers to the range in the “Mapping” sheet that contains the `kazama_location` and `Kazama` values.

4. Join the Data:

- Use `VLOOKUP` again to join `krm_main` and `krm_ndl` based on the `Kazama` code.
- For example, in the `krm_main` sheet, use this formula to retrieve the `NDL_url` from the `krm_ndl` sheet:

```
=VLOOKUP(G2, krm_ndl!$C$2:$E$100, 3, FALSE)
```

- G2 is the “Kazama Code” column in the `krm_main` sheet.
- `krm_ndl!$C$2:$E$100` refers to the range in the `krm_ndl` sheet that includes the `Kazama` and `NDL_url` columns.

2.13.1.3 Summary

With this approach, you can:

- Create a mapping table between `kazama_location` and `Kazama` codes.
- Use `VLOOKUP` to join `krm_main` and `krm_ndl` based on the `Kazama` code.

This method allows you to efficiently join the data using the mapping and Excel functions.

3 Entry Data Model

This chapter is part of the Core Documentation. It defines the Entry data model and related concepts.

Regarding the Kanchi-in manuscript *Ruiju Myōgishō*:

First, under **Entry Data Structure**, we present the internal components of an **Entry** (such as **Headword**, **Phonetic Gloss**, and **Japanese Native Reading(wakun)**) using specific examples (visual representations and transcriptions), and provide an abstracted and visualized diagram of the **Entry** structure.

Next, under **Types of Entries**, different kinds, such as basic **Entries** and supplementary **Entries**, are discussed.

Furthermore, under **Concepts Related to Character Notation**, **script styles** (書体, *shotai*), the **standard of writing Chinese characters** (字体, *jitai*), and the **shapes of Chinese characters** (字形, *jikei*), along with **variant characters** (異体字, *itaiji*) and graphically similar characters, are explained.

Finally, we cover the **Entry Data Files**, including their content, specific examples, and the methods used for publication and updates via GitHub.

- [Entry Data Structure](#)
- [Types of Entries](#)
- [Concepts Related to Character Notation](#)
- [Publication and Updates of Entry Data Files](#)

3.1 Entry Data Structure

This section explains the structure and format of **Entries** in the Kanchi-in manuscript of the *Ruiju Myōgishō* (hereinafter *Myōgishō*).

It begins by defining key terms (and related concepts) such as **Headword** (掲出字, *keishutsuji*) and **Original Glosses** (注文, *chūmon*). Next, an example of an actual **Entry** is presented as an image (a facsimile). The structure of this **Entry** is then illustrated in an abstract and diagrammatic form. Finally, a transcription of the **Entry** shown in the image is provided.

(Regarding the Japanese reading of “注文,” although we have adopted “*chūmon*,” it may also be read as “*chūbun*” to explicitly indicate that it refers to annotations on characters or words.)

3.1.1 Structure of Entries

3.1.1.1 Explanation of Terms

The following explains the terms used to describe the constituent elements of **Entries** in the *Myōgishō*.

(The English terminology presented in this section is defined from a philological viewpoint and may therefore occasionally vary from data column names or terms used in other sections of this documentation.)

An **Entry** consists of a **Headword** and **Original Glosses**.

A **Headword** (掲出字) is also referred to as *midashi*, *midashiji*, *hyōji*, or *hyōshutsushi*. In Chinese, it is called *zítóu* (字頭).

Original Glosses consist of the following components: **Phonetic Gloss** (音注, *onchū*), **Semantic Gloss in Chinese** (漢文義注, *kanbun gichū*), **Japanese Native Reading** (*wakun*) (和訓, *wakun*), **Notes on Character Form** (字体注, *jitaichū*), and **Other**.

A **Phonetic Gloss** is provided through methods such as **fanqie spellings** (反切), **Similar sound notes** (類音注, *ruion-chū*), **Kana glosses** (仮名音注, *kana-onchū*), **Tone marks** (*shōten*) (声点), and other notations.

A **Semantic Gloss in Chinese** is also sometimes referred to as *gichū* (義注, semantic gloss) or *kanbun imichū* (漢文意味注, semantic gloss in Chinese). Unless it causes misunderstanding, it is often simply referred to as **Semantic Gloss** (義注).

A **Japanese Native Reading** (*wakun*) refers to *kun'yomi* (native Japanese readings of Chinese characters) and is also sometimes called *wakunchū* (Japanese native reading glosses). It is generally written in Katakana. For example, 'mono' may be written with the abbreviated character '牛' (a variant of 物), and 'koto' may use the ligature 'ㇿ'. There is one instance where *Man'yōgana* is used (e.g., '度久佐' for '木賊').

Notes on Character Form are indicated using terms describing character-form norms, such as '正' (standard) or '俗' (popular).

There are instances of **Semantic Glosses in Chinese**, Katakana text, etc., written around the **Headword**; these can be termed **Supplementary Headword Annotations** (掲出字補注, *Keishutsuji Hochū*). These have been classified into **Phonetic Glosses**, **Japanese Native Readings** (*wakun*), etc., according to their content. In the process of data conversion, measures were taken to clearly identify them as **Supplementary Headword Annotations**.

(see “Supplementary Headword Annotations” under “[Handling Issues in Transcription, Notation, and Annotation](#)” in the “Input of Entry Data” section).

Other includes items marked as **unknown** (未詳, *mishō*), **notes on textual transmission** (伝写上の注記, *densha-jō no chūki*), and cases where the type of gloss could not be determined.

3.1.1.2 Examples of Entries (Images)

The following presents facsimile reproductions of **Entries** from the *Myōgishō* as specific examples, including those for ‘功’, ‘加復’, ‘一之’, and ‘助’ (along with its **variant characters** (*itaiji*)).

```
{{< figure src="images/krm-item-sample1.png" alt="entry structure" width="500px" >}}
```

3.1.1.3 Diagram of Entry Structure

The following is a diagram illustrating the structure of an **Entry** that contains all elements of a **Headword** and its **Original Glosses**.

```
{{< mermaid title="Entry Structure" >}} graph TB
  A(Entry) --> B(Headword)
  A --> C(Original Glosses)
  C --> D(Notes on Character Form)
  C --> E(Phonetic Gloss)
  C --> F(Semantic Gloss in Chinese)
  C --> G(Japanese Native Reading)
  C --> H(Other)
  {{< /mermaid >}}
```

3.1.1.4 Example of an Entry (Transcription)

Next, we present transcriptions of the examples shown in the images of sample **Entries**.

First, let’s consider “功,” an **Entry** that includes the basic elements.

Example

功 音工 (L-R) 「コウ (_N) 」 「クウ (_N) 」 續也 事也 成也 タシカニ (LHLH)
切歟

- **Headword:** 功
- Elements of the **Original Glosses:**
 - **Phonetic Gloss:** 音工 (L-R) 「コウ (_N) 」 「クウ (_N) 」
 - **Semantic Gloss** (in Chinese): 續也 事也 成也
 - **Japanese Native Reading (*wakun*):** タシカニ (LHLH)
 - **Note on Character Form:** 切歟

This structure should clearly illustrate the relationship between the **Headword** and the elements of the **Original Glosses**. However, a detailed explanation of this **Entry**’s content would require considerable text. The Japanese quotation marks (*kagi-kakko*) 「」 enclose supplementary notes, and the symbols shown in parentheses () are Romanized

representations of **Tone marks** (*shōten*) and nasal sound symbols. For further details, please see “[Handling Issues in Transcription, Notation, and Annotation](#)” within “[Input of Entry Data](#)”; such details are omitted here.

Similar to the example of “功,” “加復” and “一之” can be transcribed as follows.

Example:

加復 シカノミナラス
一之 同

- **Headword:** 加復
- Elements of the **Original Glosses:**
 - **Japanese Native Reading (wakun):** シカノミナラス
- **Headword:** 一（加）之
- Elements of the **Original Glosses:**
 - **Japanese Native Reading (wakun):** 同 (i.e., same as above: シカノミナラス)

Since the “一” in “一之” is a notation substituting for “加,” which is used in the preceding **Headword**, it is here written as the **Headword** “一（加）之.”

Lastly, “助” and its **variant characters (itaiji)** are shown as follows.

Example:

𠂔目力 鋤據反 タスク (LL_) マサル (HH_) ハサム 和自ヨ (_L)
助助 今正

- **Headword:** 𠂔目力
- Elements of the **Original Glosses:**
 - **Phonetic Gloss:** 鋤據反
 - **Japanese Native Reading (wakun):** タスク (LL_) マサル (HH_) ハサム
 - **Phonetic Gloss:** 和自ヨ (_L)
- **Headword:** 助助
- Elements of the **Original Glosses:**
 - **Note on Character Form:** 今正

Explaining the content of the **Original Glosses** for “加復,” “一之,” and for “助” and its **variant characters (itaiji)** would require considerable text, so it is omitted here.

3.2 Types of Entries

This section explains the criteria used to classify **Entries** in the *Ruiju Myōgishō* and describes the characteristics of each classification.

3.2.1 Classification by Headword Form

Entries can be classified according to the form of their **Headwords**, i.e., whether they consist of a single **Chinese character** or multiple **Chinese characters**.

3.2.1.1 Single Character Form and Multi-Character Form

Headwords can be in either a **Single Character Form** or a **Multi-Character Form**.

Examples:

- Example of single character form: 人
- Examples of multi-character form: 一人, 二人, 五人

Based on a tally from `krm_headword_chars.tsv` (latest version 1.2.1 as of May 12, 2025), out of a total of 32,607 **Entries** in the Kanchi-in manuscript, 24,692 **Entries** were in single character form, and 7,915 **Entries** were in multi-character form.

3.2.2 Classification Based on Entry Content and Relationships

Besides the format of the **Headword**, the main criteria for classifying **Entries** include classification based on the content of the **Entries** and classification based on the relationships between **Entries**.

3.2.2.1 Entries with Variant Characters Listed Together

When the **Headword** is in single-character form, this classification is often determined by **Form Classification Tags** (*jitaichūki*) within the **Original Glosses** (*chūmon*). However, an **Entry** can also be identified as containing variant character information based on its relationship with preceding and succeeding **Entries**, even without explicit **Form Classification Tags**.

Here, the term *jitaichūki* (字体注記, translated in this document primarily as “Form Classification Tag”) directly refers to descriptive terms indicating the type or normative status of a character form, such as “正” (standard), “俗” (popular/vulgar), and “通” (common). This concept is comparable to what Nishihara Kazuyuki refers to as *jitaikihan* (字体規範) and Lee Kyeong Won calls “字級” (*ziji*). In English, Nishihara’s *jitaikihan* is close to a “Glyph Standard Label,” and Lee’s “字級” is similar to a “Form Classification Tag.” For the purposes of this document, “Form Classification Tag” will be the primary English term used to convey a meaning similar to Lee’s “字級” (correlating with the Japanese *jitaichūki*).

An **Entry with Variant Character Information** refers to **Entries** where multiple **Headwords** are listed together to indicate **variant characters** (**itaiji**), or where **Form Classification Tags** such as “正” (standard) and “俗” (popular/vulgar) are provided within the **Original Glosses**.

Variant characters (*itaiji*) may be collated in consecutive **Entries** in single-character form, with **Form Classification Tags** provided in their **Original Glosses**. Alternatively, they may be included as variant forms within a single **Entry** in multi-character form, again with **Form Classification Tags** in the **Original Glosses**.

An **Entry** can also be identified as an **Entry with Variant Character Information** based on its relationship with preceding and succeeding **Entries**, even without explicit **Form Classification Tags**.

An **Entry** is determined to be an **Entry with Variant Character Information** based on the content of the **Form Classification Tags** (such as “正” standard and “俗” popular/vulgar) found in the **Original Glosses**, or by the relationship between the listed **Headwords**.

Currently, while we are unable to provide precise figures, our estimates suggest that out of the approximately 32,600 **Entries** in the Kanchi-in manuscript, around 14,000 are **Entries with Variant Character Information**. Among these, approximately 9,500 are expected to be in single-character form, and about 4,500 in multi-character form.

Next, we will explain this with specific examples.

Examples:

1. Example with **Form Classification Tags**: 榎査 上通下正
2. Example with **Form Classification Tags**: 𪛗𪛗 今正
3. Example without **Form Classification Tags**: 若若 音弱 (SV) 「シヤク」 モシ (RL) ...
4. Example without **Form Classification Tags**: 政𪛗正支 之盛反 マツリコト (HHHH_) ...

5. Example with Partially Missing **Form Classification Tags**: 𪛗 溺字 キヨシ

(LL_) タ、ヨフ 𪛗 (無)

𪛗

In Example 1, from the **Original Glosses** “上通下正,” it is stated that the **Headword** “槎” is “通” (common) and “查” is “正” (standard), indicating that “槎” and “查” are listed together as **Headwords** in a **variant character (*itaiji*)** relationship.

Similarly, in Example 2, from the **Original Glosses** “今正,” it is stated that the **Headword** “𠂔” is “今” (current/present form) and “𠂔” is “正” (standard), allowing us to identify this as an **Entry with Variant Character Information**.

Examples 3 and 4 are cases where no **Form Classification Tags** are visible in the **Original Glosses**. In Example 3, the difference between “𠂔” and “𠂔” is a minimal variation between “艹” (grass radical) and “艹” (grass head). Similarly, in Example 4, the difference between “政” and “𠂔正支” is a slight variation between “攴” (knock radical) and “攴” (tap/rap radical). In both cases, it is clear that they are in a **variant character (itaiji)** relationship.

In Example 5, while 休 has the note “溺字” (indicating, as per the Guanyun, that

休 is an ancient form of 溺 ‘drowning’ [“古作休”]), the subsequent **Entry** 休 lacks **Original Glosses**. This example involves “休” and its **variant character (itaiji)**, so [GlyphWiki](#) is used to display them to clarify their difference.

3.2.2.2 Idiom Entries

An **Idiom Entry** (熟語項目) is one where the **Headword** is in multi-character form and constitutes an idiom. While an **Entry** is clearly an **Idiom Entry** if there is an explanation of the **Headword** as an idiom in the **Original Glosses**, it is also considered an **Idiom Entry** even when there is no such explanation and **Phonetic Glosses** and **Semantic Glosses in Chinese** are provided for each character of the **Headword**.

Currently, while precise figures are not available, the estimated numbers for **Idiom Entries** are as follows:

Out of the approximately 32,600 **Entries** in the Kanchi-in manuscript, around 14,000 are **Entries with Variant Character Information**, meaning that approximately 18,600 **Entries** are not **Entries with Variant Character Information**. Among these approximately 18,600 **Entries**, about 15,000 are in single-character form, and 3,500 are in multi-character form. These multi-character form **Entries** are projected to be **Idiom Entries**. The remaining approximately 100 **Entries** are those for which the **Entry** type cannot be determined based on their content.

Next, we will provide specific examples.

Examples:

1. 凡一 (俗) タ、ヒト (LLV_) ワロ人 (LL)
2. 苾蒻 上蒲 (L) 「ホ」結 (S) 反 古秘字 香草也 カウハシ 又毗必反 下音鷄
草之惣名 クサ *カラクサ ワラ
3. 齟齬 上慈呂 (H) 反 嚼 ナヤマシ (LL_)
4. 菡萏 上胡感反 下徒感反 一 [菡萏] ハチスノハナ

In Example 1, for the idiom “凡俗,” the **Japanese Native Readings (wakun)** “タ、ヒト” (*tatabito*) and “ワロ人” (*warobito*) are listed.

In Example 2, for the idiom “苾蒻,” **Phonetic Glosses**, **Semantic Glosses in Chinese**, and **Japanese Native Readings (wakun)** are provided for both the first character “苾” and the second character “蒻.”

In Example 3, for the idiom “齟齬,” a **Phonetic Gloss**, a **Semantic Gloss in Chinese**, and a **Japanese Native Reading (wakun)** are provided for the first character “齟.”

In Example 4, for the idiom “菡萏,” **Phonetic Glosses** are provided for both the first character “菡” and the second character “萏,” followed by the **Japanese Native Reading (wakun)** “ハチスノハナ” (*hachisunohana* - lotus flower) for the idiom “菡萏.”

3.2.2.3 Basic Entries and Extended Entries

Based on the format of the **Original Glosses**, **Headword Entries** are divided into **Basic Entries**, in which all information regarding the “form” (形), “sound” (音), and “meaning” (義) of the **Headword** is recorded, and **Extended Entries**, which are all other **Entries**.

“Form” is represented by the **Headword** itself and **Form Classification Tags**, “sound” by **Phonetic Glosses**, and “meaning” by **Semantic Glosses in Chinese** and **Japanese Native Readings (wakun)**.

Basic Entries can be either in single-character or multi-character form. **Extended Entries** are, in terms of format, considered to follow **Basic Entries**.

In terms of content, **Extended Entries** include those in which only a part of the “form,” “sound,” or “meaning” of the **Headword** is recorded. However, even **Entries** without **Original Glosses** or with “unknown” (未詳) noted in the **Original Glosses** are included as **Extended Entries** if some kind of relationship is recognized between them and the preceding or succeeding **Entries**.

Currently, while precise figures are not available, our estimates suggest that out of the approximately 32,600 **Entries** in the Kanchi-in manuscript, around 15,100 are expected to be **Basic Entries** and approximately 17,000 are projected to be **Extended Entries**. The remaining approximately 500 **Entries** have weak relationships with other **Entries** and are presumed to have been arranged temporarily or for convenience.

Next, we will provide specific examples.

Examples:

- **Basic Entry:** 人 音仁 (LV) 「ニン」 ヒト (HL) ワレ (LL) サネ マホル ユク
- **Extended Entry:** 一人 ヒトリ (LH_)
- **Extended Entry:** 二人 フタリ (HHL)

3.2.2.4 Independent Entries and Serial Entries

Headword Entries are divided, based on whether a **Basic Entry** has **Extended Entries**, into **Independent Entries**, which consist only of a **Basic Entry** without any **Extended Entries**, and **Serial Entries**, which consist of both a **Basic Entry** and one or more **Extended Entries**. Within a **Serial Entry**, the **Basic Entry** is sometimes referred to as the **Chief Entry**, and the **Extended Entries** as **Sub Entries**.

The number of **Independent Entries** and **Serial Entries** has not yet been calculated.

Independent Entries are exemplified by the following:

Examples:

- 仕 音士 ツカフ (HHL) ツカマツル (HL_) ミヤツカヘ ツモム
- 任 音壬 (LV) 「シム」 「ニム」 タヘタリ (LR_、ヘ-フ) ...

Although “仕” (to serve) and “任” (to entrust) have similar graphic forms, they are distinct **Chinese characters**, and each functions as a **Basic Entry** with its own **Phonetic Glosses** and **Japanese Native Readings (wakun)**. However, no **variant characters (itaiji)** of “仕” or compound words containing “仕” are found. Similarly, no related **variant characters (itaiji)** or compound words are found for “任.”

Serial Entries are exemplified by “人” (person) as the **Basic Entry** and “一人” (one person), “二人” (two people) as the **Extended Entries**, as shown in the examples for **Basic Entries** and **Extended Entries**. “人” is the **Chief Entry**, and “一人” and “二人” are the **Sub Entries**.

3.3 Concepts Related to Character Notation

3.3.1 Script Styles, Character Standards, and Character Shapes

The terms “書体” (*shotai*, script style), “字体” (*jitai*, character standard), and “字形” (*jikei*, character shape) as used in this document primarily follow the definitions provided by Ishizuka Harumichi in *Zushoryōbon Nihon Shoki Kenkyūhen* (Tokyo: Kyūko Shoin, 1984). The following English explanations are translations from Ishizuka’s original Japanese definitions:

- **Script Style (*shotai*)**: A socially common style existing in the form of **Hanzi (Chinese characters)**. It is often determined by the purpose of the material in which the characters appear (e.g., 楷書 *Kaisho* [regular script], 草書 *Sōsho* [cursive script]). (Original Japanese: 書体 — 漢字の形に於て存在する社会共通の様式。多くは其の漢字資料の目的により決まる。楷書・草書等)
- **Character Standard (*jitai*)**: A socially common standard for each **Hanzi (Chinese character)** existing within a given *shotai* (script style). (Original Japanese: 字体 — 書体内に於て存在する一々の漢字の社会共通の基準)
- **Character Shape (*jikei*)**: The actual written shape itself of each **Hanzi (Chinese character)** as realized or recognized within a given *jitai* (character standard). (Original Japanese: 字形 — 字体内に於て認識する一々の漢字の書写された形そのものの)

A key feature of these definitions is their hierarchical understanding of *shotai*, *jitai*, and *jikei*.

The English definitions provided by Ishizuka et al. are as follows²:

- 書體 (*Shotai*): Socially common form of the type of a Chinese character. In many instances, the usage of a particular type is determined by the purpose of writing, 楷書, 草書, etc.
- 字體 (*Jitai*): Socially common standard of writing Chinese character existing within the 書體.
- 字形 (*Jikei*): Shape itself of a Chinese character as recognized within the standard of the 字體.

² Harumichi Ishizuka, Shoji Ikeda, Jun Shirai, and Tomokazu Takada, “The data-base focusing on the standard of writing Chinese characters in Dunhuang manuscripts,” in *Proceedings of the Nara Symposium for Digital Silk Roads*: December 10-12, 2003, Nara-ken New Public Hall, Nara, Japan, ed. Kinji Ono (Tokyo: National Institute of Informatics, 2004), 133.

Based on these English explanations (from Ishizuka et al., 2003, which are consistent with the translated 1984 definitions), this document will use the following English terms: * For 「書體（書体）」: **Script Styles (*shotai*)** (書体) * For 「字體（字体）」: **Standard of Writing Chinese Characters (*jitai*)** (字体) * For 「字形」: **Shapes of Chinese Characters (*jikei*)** (字形)

3.3.2 Variant Characters (異体字)

The term **Variant Characters (*itaiji*)** (異体字) is, at the level of **Character Standards (*jitai*)** (字体), a concept corresponding to “**Standard Characters (*seiji*)**” (正字). In models of the historical study of Chinese character forms, such as those presented by Ishizuka Harumichi in “Kanji Jitai no Nihonteki Hyōjun” (Japanese Standards of Chinese Character Forms; *Kokugo to Kokubungaku* 76, no. 5, 1999), the standard for Chinese character forms is considered to have changed according to period and region. The **Hanzi Normative Glyphs Database (HNG)** was intended to empirically demonstrate this model. Related data, including materials from its predecessor (the Ishizuka Register of Chinese Character Standards of Writing), can be accessed via the **Hanzi Normative Glyphs Dataset** available at <https://www.hng-data.org>.

While “**Variant Characters**” are generally understood to refer to character forms that are not “**Standard Characters**,” Ishizuka’s model posits that the standard for Chinese character forms—that is, the “**Standard Character**”—differs by period and region, making it impossible to distinguish *a priori* between “**Standard Characters**” and “**Variant Characters (*itaiji*)**.” In this document, we consider **Variant Characters (*itaiji*)** as variations of Chinese character forms. We judge that a character indicates a variant if it is accompanied by **Form Classification Tags** (字体注記, *jitaichūki*, also referred to as 字級, *ziji*) such as “正” (standard), “俗” (popular/vulgar), “通” (common), or “或” (alternative).

The practice of calling **Form Classification Tags** like “正” or “俗” *ziji* (字級) follows Lee Kyeong Won in his *Zui-Tang Ziyangxue Yanjiu* (隋唐字樣學研究; A Study of Sui and Tang Dynasty Character Lexicography; PhD diss., National Taiwan Normal University, Graduate Institute of Chinese, 1997).

3.3.3 Graphically Similar Characters (形近字)

Graphically Similar Characters (*keikinki*) (形近字) are distinct characters that have similar visual forms. They are also known as *ruikei betsuji* (類形別字) or *ruikei iji* (類形異字) (distinct characters of similar form). In the study of the Kanchi-in manuscript of the *Ruiju Myōgishō*, Sakai Kenji, in his article “Ruiju Myōgishō no Jijun to Bushu Hairetsu”

(Character Order and Radical Arrangement in the *Ruiju Myōgishō*),³ identified an “arrangement by similar character forms” (類似字形排列, *ruiji jikei hairitsu*) within radical sections. This can be rephrased as **Variant Characters**(*itaiji*) and **Graphically Similar Characters** being listed consecutively.

3.4 Publication and Updates of Entry Data Files

This section covers the content and specific examples of **Entry Data Files**, as well as methods for their publication and updates using GitHub.

3.4.1 Examples of Entry Data Files

A list of the publicly available data files is provided in the [Overview of Public Data](#). Here, we will explain the content of `krm_main`, which is the core **Entry Data File**, using it as an example.

Let’s consider as examples the three **Entries** that were presented as specific illustrations in the **Entry Data Structure** section: ‘加復’, ‘一之’, ‘助’ (along with its **variant characters** (*itaiji*)), and ‘功’.

The data in TSV format is shown below. A “No.” column has been added on the far left for explanatory purposes.

No	entry_id	hanzi_id	kazama_location	tenri_location	volume_name	radical_name	volume_radical_index	hanzi_entry	original_entry	definition
1	F25133	S31605	K08084810	Tc090810	僧上 力 v8#83	功	○	音工 (L-R) 「コウ (_N)」 「クウ (_N)」 續也 事也 成也	タシカニ (LHLH) 切	歟
2	F25062	S31507	K08081810	Tc087810	僧上 力 v8#83	助	目力	鉏據反 タスク (LL_) マサル (HH_) ハサム 和自ヨ (_L)		
3	F25063	S31508	K08081821	Tc087821	僧上 力 v8#83	助	助	助	助	助
4	F25121	S31590	K08084411	Tc090411	僧上 力 v8#83	加	復	加	復	加
5	F25122	S31592	K08084421	Tc090421	僧上 力 v8#83	一	之	一	之	一

The following is an explanation of the sample data shown above:

³ Sakai, Kenji. “Ruiju Myōgishō no Jijun to Bushu Hairitsu” (Character Order and Radical Arrangement in the *Ruiju Myōgishō*). In *Honpō Jishoshi Ronsō: Yamada Yoshio Tsuioku* (Collected Papers on the History of Dictionaries in Japan: In Memory of Yamada Yoshio), edited by Yamada Tadao, 191–258. Tokyo: Sanseidō, 1967.

Entry 1, ‘**Headword**’ 功, is an example of the **Single Character Form**. This particular **Entry** has complex content within its **Original Glosses**; its **Phonetic Gloss** includes multiple **Tone marks (shōten)**, Sino-Japanese readings in kana (仮名字音, *kana jion*), and nasal sound symbols. (*In the provided transcription format, details such as the distinction between circle and star types of **Tone marks (shōten)**, or the use of red versus black ink to differentiate **Tone marks (shōten)** from Sino-Japanese readings in kana, are not represented.*) The **Semantic Gloss in Chinese** 續也 is a scribal error for 續也. The **Japanese Native Reading (wakun)** タシカニ (*tashikani*) is questionable as it does not correspond to the semantic meaning of the **Headword** 功. Immediately following this *wakun*, there is a note 切歟 (*setsu ka*; “perhaps 切?”), and indeed, the character 切 has the *wakun* タシカニ (*tashikani*). The character 功 has a **variant character (itaiji)** 切, which is graphically similar to 切 and its **variant character (itaiji)** 切. 切 is a **graphically similar character** to the **Headword** 功, and this particular *wakun* is thought to have resulted from confusion between these two graphically similar characters. However, instead of altering the content of the **Original Glosses**, the note 切歟 (“perhaps 切?”) was added by the compiler or scribe. Such notes appended with 歟 (*ka*), like 切歟, are treated as ‘editorial notes’ (*ango*, 案語) by the original compiler or a later scribe of the *Myōgishō*.

Entry 2, ‘**Headword**’ 助 (whose original form is 目力 in this **Entry**), is in **Single Character Form** and provides a **Phonetic Gloss** and **Japanese Native Readings (wakun)**. The subsequent Entry 3, ‘**Headword**’ 助／助, is in **Multi-Character Form** and indicates **variant characters (itaiji)** through a **Note on Character Form** (“今正”). The ‘／’ (full-width slash) is a separator used for **Multi-Character Form Headwords**. The number of characters in such a **Headword** can be determined from the number of segments separated by these slashes (e.g., one slash indicates two characters).

Entry 4, ‘**Headword**’ 加／復, presents a **Japanese Native Reading (wakun)** for a compound term. Entry 5, ‘**Headword**’ 一 (加) ／之, indicates that it shares the same *wakun* (‘同’). The ‘一’ in 一 (加) ／之 is a symbol used to concisely represent 加, the first character of the **Headword** in the preceding **Entry** (Entry 4, 加／復).

The same content is shown below in JSON format. While this format enhances readability, it also increases the data volume, so loading the file may take some time even when using a high-performance editor like VS Code.

3.4.2 Description of Columns (Headers) in Entry Data Files

Data for the Entries of the Myōgishō is stored in `krm_main.tsv` and `krm_main.json`. These files constitute the primary data.

For details on column names and their descriptions, please refer to the [Overview of Public Data](#).

3.4.3 Publication and Updates via GitHub

The Integrated Database of Hanzi Dictionaries in Early Japan (HDIC) has been publicly available via GitHub since October 2015. The repository can be accessed at <https://github.com/shikeda>.

A summary of the Chinese character dictionaries included in the HDIC and the initial publication dates of their full-text databases is as follows:

- *Sōhon Gyokuhen* (宋本玉篇, *Songben Yupian*; abbr. SYP) – First published: October 20, 2015
- Kōsan-ji manuscript *Tenrei Banshō Meigi* (篆隸万象名義; abbr. KTB) – First published: September 1, 2016
- Tenji manuscript *Shinsen Jikyō* (新撰字鏡; abbr. TSJ) – First published: June 28, 2018
- Kanchi-in manuscript *Ruiju Myōgisho* (類聚名義抄; abbr. KRM) – First published: March 11, 2022

An explanation of what GitHub is and the significance of publishing research data through this system can be summarized as follows:

GitHub is widely used as a platform for managing and publishing software source code. In recent years, however, it has also been utilized in various research fields, including the humanities, for sharing and publishing research data. GitHub is built upon a version control system called “Git,” which records the entire editing history and clearly preserves an audit trail of changes. This makes it possible to track who made what changes and when, thereby enhancing the transparency and reproducibility of research data.

Furthermore, GitHub facilitates collaborative editing among multiple individuals. Features such as pull requests and issues allow for dialogue and peer-review-like interactions with other researchers to be recorded. Its appeal also lies in features like document creation using Markdown notation and the ability to view file-specific revision histories, making it relatively easy to use even for humanities researchers who do not write programs.

The significance of placing data on GitHub extends beyond mere storage. It enables “open science” practices, where research progress is incrementally published, and improvements are made based on external feedback. It is particularly well-suited for structured humanities data, such as data on Sino-Japanese character readings (like *Kan-on* and *Go-on* based on historical sources), transcribed texts, and lexicographical information, with many existing examples of its use.

Moreover, data on GitHub can be linked with Zenodo, a research data repository, to assign a formal DOI (Digital Object Identifier) and publish it in an academically stable manner. For instance, the “Database of Historical Sino-Japanese Readings” (DHSJR) utilizes GitHub for data construction, and this data is then registered with Zenodo and published with a DOI, making it internationally citable and reusable. In this way, GitHub is playing a significant role as a foundation for the long-term sharing and utilization of digital resources in the humanities.

4 Input of Entry Data

This chapter is part of the Core Documentation. It defines the editorial and encoding rules for inputting Entry data.

This document explains how to input **Entry** data for the Kanchi-in manuscript of the *Ruiju Myōgishō*. Hereinafter, the Kanchi-in manuscript of the *Ruiju Myōgishō* will be referred to as “*Myōgishō*” or “KRM.”

An **Entry** consists of a **Headword** and **Original Glosses**. This section focuses on matters common to the input of **Headwords** and **Original Glosses** for the main **Entry** data of the “*Myōgishō*” (e.g., `krm_main.tsv`).

Among the input rules explained in this document, those concerning **character representation methods** (such as for characters outside of Unicode, special symbols, etc.) may also apply to other published data, including `krm_notes` (the file containing data for **Compiler's Remarks**). For details on the overall structure and file formats of the published data, please refer to the [Overview of Public Data](#).

The published data primarily uses TSV format, but some data is also available in JSON format for better readability.

First, we will explain the **Headwords, Entry Arrangement, and ID System**. The ID system for KRM data is complex, so users are advised to read this section carefully. Next, we will discuss **Character Encoding and Representation** using Unicode. We will also explain the handling of characters that cannot be represented by Unicode, as multiple methods are used in combination. Finally, we will organize **scribal issues** such as misspellings and omissions; **notation formats for characters and words** like abbreviation marks and iteration marks; and **additional notes and layout** features such as interlinear notes and small character annotations. We will then summarize the **Handling of Issues in Transcription, Notation, and Annotation**.

- [Headwords, Entry Arrangement, and ID System](#)
- [Character Encoding and Representation](#)
- [Handling Issues in Transcription, Notation, and Annotation](#)

4.1 Headwords, Entry Arrangement, and ID System

This section explains the structure of **Entries** in the *Myōgishō* and the ID system used to identify them.

4.1.1 Definitions of Headwords and Entries

A **Headword** refers to the **Chinese character** or string of **Chinese characters** that forms the heading. An **Entry** is the basic unit of the dictionary, typically consisting of a **Headword** and its associated **Original Glosses**.

In the *Myōgishō*, the **Headword** of an **Entry** consists of either a **single Chinese character** or **multiple Chinese characters** (a multi-character compound).

Entries are presented in two forms based on their **Headwords**: * **Single Character Form**: When the **Headword** is a single **Chinese character**. * **Multi-Character Form**: When the **Headword** consists of multiple **Chinese characters**.

Multi-Character Form Entries include those for **idioms (or compounds)** and those that **co-list variant characters (*itaiji*)**.

Below are some examples of these two forms:

Examples: * **Single Character Form**: 人, 何 * **Multi-Character Form**

(idioms/compounds): 一人, 二人, 何如, 如何 * **Multi-Character Form** (co-listing **variant characters (*itaiji*)**): 爲為, 羆羆

The distinction between **Multi-Character Form Entries** for idioms/compounds and those co-listing **variant characters (*itaiji*)** is determined by the content of the **Original Glosses**. For example, in ‘爲為’, which co-lists **variant characters (*itaiji*)**, the **Original Glosses** contain the **Form Classification Tag** ‘正今’ (*sei kin*). This indicates that ‘爲’ is the ‘standard’ (*sei*) form and ‘為’ is the ‘current/modern’ (*kin*) form, thus establishing their relationship as variants. Similarly, for ‘羆羆’, the **Original Glosses** contain the **Form Classification Tag** ‘正俗’ (*sei zoku*), indicating that ‘羆’ is the ‘standard’ (*sei*) form and ‘羆’ is the ‘popular/vulgar’ (*zoku*) form, confirming their variant relationship.

4.1.2 Principles and Exceptions in the Arrangement of Entries

A single page in the *Myōgishō* is typically composed of 8 lines (rows) and 4 segments (columns per line). In other words, each page has a layout of 8 vertical lines and 4 horizontal segments, totaling 32 cells (or blocks) for entries.

The overwhelming majority of **Entries** are “single-segment, single-entry” (一段一項目, *ichidan ikkōmoku*), meaning one **Entry** is written within a single cell.

When an explanation (i.e., the **Original Glosses**) is lengthy, it may occupy two or more cells, extending over multiple segments or multiple lines. Such “multi-segment, single-entry” (多段一項目, *tadan ikkōmoku*) instances also appear frequently. However, even with lengthy explanations, an **Entry** never extends beyond a single page. Thus, the general principle is that a single cell contains one **Entry** or less.

As an exception, two **Entries** may occasionally be found within a single segment. These “single-segment, multi-entry” (一段多項目, *ichidan takōmoku*) cases account for less than 1% of the total.

Bearing these principles and exceptions in mind, we will now explain the ID system for the *Myōgishō*. The complexity of the *Myōgishō*'s ID system stems largely from this occasional practice of recording two **Entries** within a single segment, a point to which users of this data should pay particular attention.

4.1.3 ID System of the *Myōgishō*

4.1.3.1 Types of IDs

In the *Myōgishō* data, **Entries** and individual character positions within **Headwords** are primarily managed by the following columns:

- **Entry ID** (`entry_id` - e.g., F00001) - F-format
- **Headword Character ID** (`hanzi_id` - e.g., S00001) - S-format
- **Kazama Edition Location** (`kazama_location` - e.g., K01001310) - K-format
- **Tenri Edition Location** (`tenri_location` - e.g., Ta023310) - T-format

4.1.3.2 Relationship Between Columns

The **Entry ID** (`entry_id`) identifies one or more **Headword Character IDs** (`hanzi_id`) that constitute the **Headword** of that **Entry**.

The **Headword Character ID** (`hanzi_id`) is the primary key that uniquely identifies each individual character position within the data structure (particularly in files like `krm_headword_chars`).

Each **Headword Character ID** (`hanzi_id`) is linked to corresponding location IDs (for the Kazama and Tenri editions).

The establishment of these four types of IDs accommodates the diversity of **Entries** in the *Myōgishō* and facilitates the use of multiple facsimile editions. For this reason, explanations of the F-format, S-format, K-format, and T-format IDs are provided repeatedly as needed, even if it involves some redundancy.

4.1.3.3 Detailed Format of Primary IDs

4.1.3.3.1 Entry ID (`entry_id` / F-format)

Format: The **Entry ID** (`entry_id`) is a 5-digit number prefixed with 'F', forming a sequential series from F00001 to F32604. For some additionally inserted **Entries**, a 'b' suffix is appended to the numeric part of the ID. It should be noted that while a 'b' suffix may also be appended to the **Headword Character ID** (`hanzi_id` described below), the 'b' suffix for an `entry_id` is assigned independently of any 'b' suffix on a `hanzi_id`.

Purpose: To uniquely identify each **Entry** in the *Myōgishō*.

4.1.3.3.2 Headword Character ID (`hanzi_id` / S-format)

Format: The **Headword Character ID** (`hanzi_id`) is a 5-digit number prefixed with 'S', forming a sequential series from S00001 to S42328. This is the S-format. For some additionally inserted **Headword** characters, a 'b' suffix is appended to the numeric part of

the ID. It should be noted that while a 'b' suffix may also be appended to the **Entry ID** (`entry_id` mentioned above), the 'b' suffix for a `hanzi_id` is assigned independently of any 'b' suffix on an `entry_id`.

Purpose: To serve as the primary key that uniquely identifies each individual **Headword** character (i.e., each character position) within the dataset.

Supplement: A separate data file lists all **Headword** Character IDs (`hanzi_id`), including those for the second and subsequent characters in multi-character **Headwords**. This file is `krm_headword_chars`, the details of which are described elsewhere.

4.1.3.3.3 *Kazama Edition Location (`kazama_location` / K-format)*

Format: K + Volume (2 digits) + Kazama Edition Page number (3 digits) + Line number (1 digit) + Segment number (1 digit) + Character Order (1 digit). This is the K-format.

Character Order (1 digit): This digit is a number assigned based on the type of **Entry** (single-character or multi-character) and its order of appearance within that segment. While the "Character Order" is fundamentally a criterion based on individual character positions, it is used here to indicate the location of an **Entry** by referencing the position of the **first character** of that **Entry** within the segment.

The use of a character-position-based criterion for this "Character Order" digit is specifically to address the exceptional cases where two or more **Entries** are recorded within a single segment (which can also be thought of as a single cell or block in the layout).

To apply this character-position-based criterion representatively for the "Character Order," the following rules for determining this digit have been established:

- **Case 1: If there is only one Entry in the segment**
 - If the **Entry** is a **single-character Entry**, the Character Order is **0**.
 - If the **Entry** is a **multi-character Entry**, the Character Order is **1**.
- **Case 2: If there are two or more Entries in the segment**
 - For the **first Entry** in the segment, the Character Order is **1**.
 - For the **second or subsequent Entries** in the segment, the Character Order indicates **the position of the first character of that Entry, counted sequentially from the beginning of the segment** (where the first character position in the segment is counted as 1).

For example, consider a segment containing 'A' and then 'BC', where 'A' is the 1st character in the segment, 'B' is the 2nd, and 'C' is the 3rd. The **Entry** 'BC' is the second **Entry** in this segment. Its first character is 'B', which is the 2nd character from the beginning of the segment. Therefore, the Character Order for the **Entry** 'BC' is **2**. Alternatively, consider a segment containing 'AB' and then 'CD', where 'A' is the 1st character, 'B' the 2nd, 'C' the 3rd, and 'D' the 4th. The **Entry** 'CD' is the second **Entry** in this segment. Its first character is 'C', which is the 3rd character from the beginning of the segment. Therefore, the Character Order for the **Entry** 'CD' is **3**.

Examples of kazama_location IDs: * K01001310: (Indicates a **single-character Entry**, one **Entry** per segment) Volume 1, Page 1, Line 3, Segment 1, **Character Order 0**. * K08084411: (Indicates a **multi-character Entry**, one **Entry** per segment) Volume 8, Page 84, Line 4, Segment 1, **Character Order 1**. * K01004241: (Indicates the **first Entry** when multiple **Entries** are in the segment) Volume 1, Page 4, Line 2, Segment 4, **Character Order 1**. * K01004242: (Indicates an **Entry** starting from the **2nd character position** within the segment, when multiple **Entries** are in the segment) Volume 1, Page 4, Line 2, Segment 4, **Character Order 2**. * K01008341: (Indicates the **first Entry** when multiple **Entries** are in the segment) Volume 1, Page 8, Line 3, Segment 4, **Character Order 1**. * K01008343: (Indicates an **Entry** starting from the **3rd character position** within the segment, when multiple **Entries** are in the segment) Volume 1, Page 8, Line 3, Segment 4, **Character Order 3**.

Purpose: To indicate the location of an **Entry** in the Kazama Edition. This ID system is determined based on rules for indicating character position, designed to accommodate all various arrangement patterns of **Entries**: the primarily used “single-segment, single-entry” arrangement; the frequently occurring “multi-segment, single-entry” arrangement; and the rare “single-segment, multi-entry” arrangement.

Source: Based on *Ruiju Myōgishō, Daiikkan* (類聚名義抄 第一卷, Ruiju Myōgishō, Vol. 1), edited by Masamune Atsuo (Tokyo: Kazama Shobō, 1954).

4.1.3.3.4 Tenri Edition Location (*tenri_location* / *T-format*)

The Tenri Edition Location (*tenri_location*) follows principles similar to those for determining the K-format of the Kazama Edition Location. Its format, Character Order, and purpose are defined as follows:

Format: T + Volume (a/b/c) + Page number (3 digits) + Line number (1 digit) + Segment number (1 digit) + Character Order (1 digit). This is the T-format.

Character Order (1 digit): This digit is a number assigned based on the type of **Entry** (single-character or multi-character) and its order of appearance within that segment. While the “Character Order” is fundamentally a criterion based on individual character positions, it is used here to indicate the location of an **Entry** by referencing the position of the **first character** of that **Entry** within the segment.

The use of a character-position-based criterion for this “Character Order” digit is specifically to address the exceptional cases where two or more **Entries** are recorded within a single segment (which can also be thought of as a single cell or block in the layout).

To apply this character-position-based criterion representatively for the “Character Order,” the following rules for determining this digit have been established:

- **Case 1: If there is only one Entry in the segment**
 - If the **Entry** is a **single-character Entry**, the Character Order is 0.

- If the **Entry** is a **multi-character Entry**, the Character Order is **1**.
- **Case 2: If there are two or more Entries in the segment**
 - For the **first Entry** in the segment, the Character Order is **1**.
 - For the **second or subsequent Entries** in the segment, the Character Order indicates **the position of the first character of that Entry, counted sequentially from the beginning of the segment** (where the first character position in the segment is counted as 1).

The method for indicating the Tenri Edition Location is based on the same principles as that for the Kazama Edition Location. The examples used to explain the Kazama Edition Location, if shown as Tenri Edition Locations, would be as follows:

Examples of `tenri_location` IDs: * `Ta023310`: (Indicates a **single-character Entry**, one **Entry** per segment) Upper Volume (上巻), Page 23, Line 3, Segment 1, **Character Order 0**.

* `Tc090411`: (Indicates a **multi-character Entry**, one **Entry** per segment) Lower Volume (下巻), Page 90, Line 4, Segment 1, **Character Order 1**. * `Ta026241`: (Indicates the **first Entry** when multiple **Entries** are in the segment) Upper Volume (上巻), Page 26, Line 2, Segment 4, **Character Order 1**. * `Ta026242`: (Indicates an **Entry** starting from the **2nd character position** within the segment, when multiple **Entries** are in the segment) Upper Volume (上巻), Page 26, Line 2, Segment 4, **Character Order 2**. * `Ta030341`: (Indicates the **first Entry** when multiple **Entries** are in the segment) Upper Volume (上巻), Page 30, Line 3, Segment 4, **Character Order 1**. * `Ta030343`: (Indicates an **Entry** starting from the **3rd character position** within the segment, when multiple **Entries** are in the segment) Upper Volume (上巻), Page 30, Line 3, Segment 4, **Character Order 3**.

Purpose: To indicate the location of an **Entry** in the Tenri Edition. This ID system is determined based on rules for indicating character position, designed to accommodate all various arrangement patterns of **Entries**: the primarily used “single-segment, single-entry” arrangement; the frequently occurring “multi-segment, single-entry” arrangement; and the rare “single-segment, multi-entry” arrangement.

Source: Based on *Ruiju Myōgishō: Butsu, Hō, Sō* (類聚名義抄 仏・法・僧; Tenri Toshokan Zenpon Sōsho, Washo no Bu, vols. 32-34; Tenri Daigaku Shuppanbu, distributed by Yagi Shoten).

4.1.3.4 **Input Method for Headwords**

Headwords are input into the `hanzi_entry` column.

Entries have **Headwords** that can be in either **Single Character Form** or **Multi-Character Form**. As the **Single Character Form** generally does not pose particular input issues, this section will focus on the input method for **Headwords** in **Multi-Character Form**.

For **Multi-Character Form Headwords**, whether they represent a co-listing of **variant characters** (*itaiji*) or an idiom/compound, the constituent characters of the **Headword** are input separated by a ‘／’ (full-width slash, U+FF0F).

If a **Headword** in an **Entry** contains ‘／’, this indicates that the **Headword** is in **Multi-Character Form**. The number of characters in such a **Headword** can be determined by the number of segments separated by the ‘／’ (e.g., one slash results in two segments, indicating two characters).

Examples:

- Co-listing of **variant characters** (*itaiji*): 脩／脩／脩／脩 β
- Idiom/compound: 一／人

For details on how to input characters using Unicode, please refer to the [Character Encoding and Representation](#) section.

4.1.3.5 Handling of IDs in Data Representation

The main entry data for the *Myōgishō* (e.g., in `krm_main.tsv`) is published in TSV format. This subsection explains how each ID is represented in the TSV files, with a particular focus on the representation rules for **Multi-Character Form Entries**. While some explanations may overlap with those in other sections (such as “Detailed Format of Primary IDs,” “Input Method for **Headwords**,” and the section on `krm_headword_chars` which details individual headword characters and acts as a mapping table), this information is crucial for processing the TSV-formatted data and is therefore summarized again here.

TSV Columns and Corresponding IDs:

The primary TSV files store the following IDs in their respective columns:

- `entry_id`: **Entry** ID (F-format)
- `hanzi_id`: **Headword** Character ID (S-format)
- `kazama_location`: Kazama Edition Location (K-format)
- `tenri_location`: Tenri Edition Location (T-format)

IDs other than those listed above (e.g., the **Headword** Character IDs or location IDs for the second and subsequent characters within a multi-character **Headword**) are not directly stored in this primary file but can be referenced through a separate mapping table (`krm_headword_chars.tsv`).

Data Representation Rules for **Multi-Character Form Entries**

- **Multi-Character Form Headwords** (such as those co-listing **variant characters** (*itaiji*) or representing idioms/compounds) are stored as a string in the `hanzi_entry` column, with constituent characters separated by a full-width slash (‘／’).

- Regarding the representation of IDs, the main TSV row corresponding to a **Multi-Character Form Entry** displays only the IDs related to the **first character** of that **Headword**.
- IDs (S-format, K-format, T-format) related to the second and subsequent characters that constitute the **Headword** are omitted from this main row.

Example: Suppose there is an **Entry** with the **Headword** “AB” (composed of A + B), and their respective IDs are as follows:

- Entry** ID: F25121
- Headword** Character ID for A: S31590 (Kazama Edition Location: K08084411, Tenri Edition Location: Tc090411)
- Headword** Character ID for B: S31591 (Kazama Edition Location: K08084412, Tenri Edition Location: Tc090412)

When this **Entry** is represented in the TSV file, the main row would appear as follows (showing relevant columns only):

entry_id	hanzi_id	hanzi_entry	kazama_location	tenri_location
F25121	S31590	AB	K08084411	Tc090411

It can be seen that this row contains only the **Entry** ID, the **Headword** Character ID for the **first character**, the complete **Headword** string, and the location IDs for the **first character**.

4.1.3.6 Deferring Detailed Headword Character Information to a Mapping Table

All of the following detailed information pertaining to **Headword** characters is deferred to the mapping table `krm_headword_chars`:

- The complete list of more detailed location information (K-format, T-format) corresponding to each **Headword** Character ID (S-format).
- The cropped image file name corresponding to each individual **Headword** character (S-format).

Users who require this information will need to consult `krm_headword_chars.tsv`.

4.2 Character Encoding and Representation

This section explains the **encoding and representation of characters** using Unicode. It also describes the multiple methods used in combination to handle characters that cannot be represented by Unicode.

4.2.1 Character Encoding with Unicode

The number of CJK Unified Ideographs differs depending on the Unicode version. The HDIC project started in 2014, and initially, the baseline was Unicode 8.0.0 (from 2015). At that time, the number of usable **Hanzi (Chinese characters)** was 80,358, comprising CJK Unified Ideographs and CJK Unified Ideographs Extensions A through E. Extensions have continued since then, with the total number of characters now exceeding 90,000. However, even after characters are included in Unicode, it seems to take time before they can

actually be displayed on screens or used in print. The HDIC project utilizes characters up to CJK Unified Ideographs Extension E as much as possible. For characters in Extension F and beyond, the project currently limits its practice to noting them in remarks columns or similar fields.

4.2.2 Representation of Characters Outside of Unicode

“Characters outside of Unicode” refers to **Hanzi (Chinese characters)** that are not included in the Unicode standard. These characters are represented using the following three methods:

- IDS Method
- Entity Reference Method
- Beta Method (β Method)

The **IDS Method** is used when a character can be represented by a combination of its constituent components, described using an IDS (Ideographic Description Sequence). The IDS data used and referenced in this project is primarily that constructed and made publicly available by **Morioka Tomohiko** in the [CHISE IDS Search](#).

An IDS is indicated by IDCs (Ideographic Description Characters). The twelve IDCs are: 𠄎, 𠄐, 𠄑, 𠄒, 𠄓, 𠄔, 𠄕, 𠄖, 𠄗, 𠄘, 𠄙, and 𠄚.

Examples: * Example of the IDS Method: 𠄎𠄑胃 (representing a character with the ‘𠄑’ radical on the left and ‘胃’ on the right), 𠄎𠄑𠄐𠄑𠄑𠄑 (a variant of ‘凭’, an example using multiple IDCs).

If representation by the IDS Method is difficult, one of the following methods is used.

The **Entity Reference Method** involves describing characters using notations based on the entity reference systems of CHISE and GlyphWiki.

Examples: * CHISE Entity Reference Method: 𠄎𠄑&CDP-8C66; (a variant of ‘延’, where &CDP-8C66; represents the bottom-right component of ‘𠄑’, a glyph similar to 𠄑). *

GlyphWiki Entity Reference Method: koseki-007510 (representing a glyph with ‘𠄑’ at the top-right of ‘𠄑’).

The **Beta Method (β Method)** involves describing characters by combining a graphically similar character with Greek letters such as β (beta), γ (gamma), etc. This Beta Method was proposed by Toyoshima Masayuki.

Example: * Example of the Beta Method: 𠄎 β (representing a glyph with two horizontal ‘𠄑’ strokes inside the ‘𠄎’ radical of ‘𠄎’).

Characters that cannot be represented by any of the above methods, or characters that are illegible in the original manuscript (due to damage such as wormholes, etc.), are

represented by '■' (a black square). For more details on illegible characters, please refer to the section “Wormholes and Illegible Characters.”

4.2.3 Utilizing GlyphWiki

To display glyphs in a Mincho typeface that closely approximate those in the manuscript, GlyphWiki (developed by Uechi Kōichi) can be utilized. By using GlyphWiki, it is possible to display such approximate Mincho-style glyphs.

The creation of glyph forms for the **Headwords** of the *Myōgishō* using GlyphWiki is currently in progress and not yet complete, but it is mentioned here for reference.

By associating GlyphWiki glyph numbers with the `kazama_location_id` found in the `krm_headword_chars` file, the **Headwords** of the *Ruiju Myōgishō* can be represented in a Mincho typeface.

The GlyphWiki glyph number is expressed by taking a prefix—formed by combining the abbreviation for this project (HDIC) with the abbreviation for the Kanchi-in manuscript of the *Ruiju Myōgishō* (KRM), resulting in `hdic_hkrm`—and appending the numerical part of the `kazama_location_id` (from `krm_headword_chars`) after removing its ‘K’ prefix.

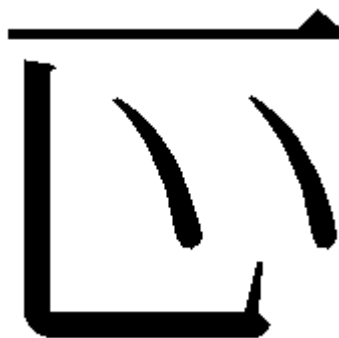

For example, for the **Headword** of **Entry** ID (`entry_id`) F01852, if its corresponding `kazama_location_id` in the `krm_headword_chars` file is K01075140, then its GlyphWiki glyph number will be `hdic_hkrm-01075140`.

This will be demonstrated next using Markdown notation.

Example:

```
![[𐤀 𐤁]](https://glyphwiki.org/glyph/hdic_hkrm-01075140.png)
```

When described in Markdown as shown above, it will be displayed as follows:

𐤀 𐤁

This character size is large; if you wish to use a smaller size, use the following notation:

```
![[𐤀 𐤁]](https://glyphwiki.org/glyph/hdic_hkrm-01075140.50px.png)
```

When described in Markdown as shown above, it will be displayed as follows:

正 B

Note that the filename `hdic_hkrm-01075140.png` is derived from the numerical part of the `kazama_location_id` `K01075140` found in the `krm_headword_chars` file.

To display it with a specified size, you can write it as follows:

```
{{</* figure src="https://glyphwiki.org/glyph/hdic_hkrm-01075140.png"
title="" class="center" width="24" height="24" */>}}
```

```
{{< figure src="https://glyphwiki.org/glyph/hdic_hkrm-01075140.png" title=""
class="center" width="24" height="24" >}}
```

4.3 Handling Issues in Transcription, Notation, and Annotation

The *Myōgishō* is a dictionary of **Hanzi (Chinese characters)**. To accurately decipher its content and convert it into digital text, it is necessary to first understand the various characteristics visible in the original *Myōgishō* manuscripts and then to establish specific methods for data input and processing.

First, as the *Myōgishō* is an ancient manuscript, scribal errors are unavoidable. Under **Scribal Issues**, we will address **Miswritten Characters** (誤字, *goji*), **Omitted Characters** (脱字, *datsuji*), **Superfluous Characters** (衍字, *enji*), and **Correction Marks** (訂正符号, *teisei fugō*).

Next, the *Myōgishō* employs sophisticated notational conventions for characters and words to convey diverse information related to the form, sound, and meaning of **Hanzi (Chinese characters)** accurately and efficiently. Under **Notational Conventions for Characters and Words**, we will discuss frequently used **Abbreviated Characters** (略字, *ryakuji*), **Variant Characters** (**itaiji**) (異体字), **Iteration Marks** (踊り字, *odoriji*), and **Substitution Marks** (代用符号, *daiyō fugō*). Although not numerous, examples of **Compound Marks** (合符, *gōfu*)—symbols used to connect characters to indicate they form a compound word—also exist and will be briefly introduced here. Since the nature of **Substitution Marks** and **Compound Marks** can be difficult to grasp, they will be explained in detail with examples in their respective dedicated sections.

Finally, various ingenious methods are also applied to information added beyond the main text of the *Myōgishō*, as well as to physical characteristics such as layout and variations in character size. Under **Additional Notations and Layout Features**, we will cover:

- **Interlinear Notes** (割注, *warichū*),

- variations in the size of characters within **Original Glosses** (注文文字の大小, *chūmon moji no daishō*),
- **Small Character Annotations** (小字注記, *shōji chūki*),
- **Annotations from Variant Manuscripts** (異本注記, *ihon chūki*),
- **Source Attributions** (出典注記, *shutten chūki*),
- **Tone Marks (*shōten*)** (声点),
- **Morphosyntactic Glosses (*wokototen*)** (ヲコト点),
- line breaks and spacing (改行・空白, *kaigyō/kūhaku*),
- **Interpolated Glosses** (補入注文, *honyū chūmon*),
- unannotated **Entries** (無注記, *muchūki*), and
- other noteworthy cases.

We will also explain how these are input and processed. The explanation of **Tone Marks (*shōten*)** will concurrently cover voiced sound symbols and nasal sound symbols.

While the primary focus of this explanation will be on issues common to the entire text of the *Myōgishō*, if there are problems specific to the constituent elements of an **Entry**—namely the **Headword**, **Notes on Character Form**, **Phonetic Glosses**, **Semantic Glosses in Chinese**, and **Japanese Native Readings (*wakun*)**—these will also be addressed according to their significance. For example, “iteration marks” (踊り字, *odoriji*) are a common issue across various elements of an **Entry**, whereas “**Tone Marks (*shōten*)**” and “nasal sound symbols” (鼻音符号, *bionfugō*) are particularly problematic in the context of **Phonetic Glosses**.

In the published data, the transcription of **Headwords** is recorded in the `hanzi_entry` and `original_entry` columns of the `krm_main` file. Similarly, the `hanzi_entry` and `original_entry` columns in the `krm_notes` file contain the same content as those in `krm_main`. The `krm_wakun` file exclusively lists **Japanese Native Reading (*wakun*)** data in its `wakun_elements` column.

Furthermore, instances requiring particularly detailed explanation are described in the `remarks` column of the `krm_notes` file as **Compiler's Remarks**.

For more details on the overall structure of the published data and file formats, please refer to the [Overview of Public Data](#).

The transcription of the **Original Glosses** is recorded in the `definition` column of the `krm_main` public data file. In the `krm_notes` file, the constituent elements of the **Original Glosses**—namely **Notes on Character Form**, **Phonetic Glosses**, **Semantic Glosses in Chinese**, **Japanese Native Readings (*wakun*)**, and **Other** information—are categorized and recorded in the `definition_elements` column.

4.3.1 Scribal Issues

This section addresses issues such as **Miswritten Characters** (誤字, *goji*), **Omitted Characters** (脱字, *datsuji*), **Superfluous Characters** (衍字, *enji*), and **Correction Marks** (訂正符号, *teisei fugō*).

4.3.1.1 Miswritten Characters (誤字, *goji*)

When a **Headword** is clearly a **Miswritten Character** (誤字, *goji*), the collated (corrected) form is recorded in the `hanzi_entry` column, and the original manuscript form is recorded in the `original_entry` column. The basis for the collation is provided in the `remarks` column of the `krm_notes` file (for details on `krm_notes`, please refer to the relevant section in the [Overview of Public Data](#)).

Examples (Original Japanese remarks): - `hanzi_entry`: 向／後, `original_entry`: 〇／一 (約), `remarks`: 掲出字は「向後」とすべきを誤る。岡田研究 193-194 頁に「一」使用は高山寺本が適切との指摘あり。 - `hanzi_entry`: 姪, `original_entry`: 活, `remarks`: 掲出字は誤写。高山寺本・蓮成院本・西念寺本「姪」に作るにより改める。

As illustrated by the preceding examples, the `remarks` in the `krm_notes` file are originally written in Japanese. English translations of these specific `remarks` are provided below for reference.

English Translations of `remarks` examples:

- **For `hanzi_entry` ‘向／後’:** Erroneous **Headword**; should be ‘向後’. Okada (pp. 193-194) notes the use of ‘一’ is appropriate for the Kōzan-ji ms.
- **For `hanzi_entry` ‘姪’:** Miscopied **Headword**. Corrected to ‘姪’ per Kōsan-ji, Renshō-in, & Sainen-ji mss.

4.3.1.2 Omitted Characters (脱字, *datsuji*)

When a character is clearly omitted from a **Headword**, the presumed omitted character is indicated by enclosing it in full-width square brackets “ [] ”. If further explanation is necessary, it is provided separately (e.g., in the **Compiler's Remarks**).

Examples: 1. 将／ [指] 2. 叔／ [母]

In Example 1, the **Headword** is found in the “手” (hand) radical section, and it is evident from the context that the character ‘指’ is missing.

In Example 2, the **Headword** is found in the “女” (woman) radical section. Given the presence of the character ‘母’ in preceding and succeeding **Entries**, its omission here is clear.

If it is clear that a character has been omitted, but the specific missing character is unknown, it is indicated by a full-width underscore within full-width square brackets, like “ [] ”.

The following example illustrates a case where either the first or second character of a *fanqie* spelling was clearly omitted, but the specific missing character is unknown.

Example: * 𦉰 [] 覽反

In this example, the **Original Glosses** for ‘𦉰’ show “覽反”. According to the *Guangyun*, ‘𦉰’ has readings *chùzhān qiè* (處占切; level tone, 鹽韻, for the character 𦉰) or *tǔgǎn qiè* (吐敢切; rising tone, 敢韻, for the character 𦉰). Since ‘覽’ has the *Guangyun* reading *gǎnlú qiè* (敢盧切; rising tone, 敢韻), it is clear that the first character of the *fanqie* spelling is missing. Therefore, it is transcribed as “ [] 覽反”.

4.3.1.3 Superfluous Characters (衍字, *enji*)

Cases of **Superfluous Characters** (衍字, *enji*) are noted in the **remarks** column of the `krm_notes.tsv` file.

Examples are shown below in the order of **Headword** (`hanzi_entry`), relevant part of the **Original Glosses** (`definition_elements` from `krm_notes` or context from `krm_main`’s definition), and **Compiler’s Remarks** (`remarks`).

Examples: * **Headword** (`hanzi_entry`): 𦉰 **Original Glosses** (excerpt from `definition / definition_elements`): 又俗音𦉰也 **Compiler’s Remarks** (`remarks`): The character ‘也’ in “又俗音𦉰也” is superfluous. * **Headword** (`hanzi_entry`): 𦉰 **Original Glosses** (excerpt from `definition / definition_elements`): ヒカ、メ **Compiler’s Remarks** (`remarks`): The Shinsen Jikyō* has “又比加目”. The ‘、’ mark here is possibly a superfluous character, but this remains questionable (存疑, *zongī*).

4.3.1.4 Correction Marks (訂正符号, *teisei fugō*)

The marks used for corrections in the main text include **Transposition Marks** (転倒符, *tentōfu*), **Deletion Marks** (見消符, *misekechifu*), and **Interpolation Marks** (補入符, *honyūfu*).

- **Transposition Marks** (転倒符, *tentōfu*; also called 顛倒符, *tentōfu*) are used to correct the order of characters within a **Multi-Character Form Headword**.
- **Deletion Marks** (見消符, *misekechifu*; also called 抹消符, *masshōfu*) often indicate that the correct **Headword** is provided as a side note (e.g., 傍記 or 傍書).
- **Interpolation Marks** (補入符, *honyūfu*) are used to correct the order of **Entries**.

When inputting the main text data, the text is entered in its corrected form as indicated by these correction marks, and the details of such corrections are recorded in the **remarks** column (which forms part of the **Compiler's Remarks**).

In the input examples that follow, detailed explanations are provided for each instance of correction or annotation. This explanatory content constitutes the **Compiler's Remarks** and is recorded in the **remarks** column of the **krm_notes** file.

Example 1: *hanzi_entry: 儻／儻 *definition_elements: コヒネカハクハ *remarks: Nishihata, *Gosha Shorei* (Examples of Scribal Errors), p. 54, item ③ “moji no irekawari” (character transposition) no. 818. Kusakawa Noboru (“Ruiju Myōgishō Wakun Shōkō,” p. 29) notes that the Kōzan-ji manuscript has a **Transposition Mark** on the upper right of ‘ヒ’ in “コネヒカハクハ,” indicating the character transposition error (as pointed out by Nishihata for the Kanchi-in manuscript) had already been resolved.

Example 2: *hanzi_entry: 振 *definition_elements: 不定「ウシ、歟」相撃 *remarks: Masamune’s Index, under ‘ウシ、’, notes: “Is ‘ウシ、’ an error for ‘ホシ、’, or was the cursive form of ‘完’ misread as ‘ホシ、’? It is a lexical error.” Under ‘フ’, it states: “Could this be the character ‘不’, explained in the *Jikyō* dictionary as ‘音灰不言相撃’ (pronunciation *hai*, unspoken, mutual strike)? This requires further research.” Kusakawa’s *Wakun Shūsei* records ‘ウシ、’ (treating it as a *wakun*). Ikeda’s note: In the original text “フ定相撃”, there is a red **Deletion Mark** to the left of ‘定’, and ‘ウシ、歟’ (“perhaps ウシ、?”) is written to its right in red. This is likely an editorial note (*ango*) added due to misidentifying a **Hanzi (Chinese character)** as kana.

Example 3: *hanzi_entry: 𠂔戸𠂔 *definition_elements: △在下 *remarks: Although ‘△’ is written in a large size similar to a **Headword**, it is not a **Headword** itself but should be regarded as an **Interpolation Mark**.

4.3.2 Notational Conventions for Characters and Words

This section discusses frequently used **Abbreviated Characters** (略字, *ryakuji*), **Variant Characters** (*itaiji*) (異体字), **Iteration Marks** (踊り字, *odoriji*), **Substitution Marks** (代用符号, *daiyō fugō*), and **Compound Marks** (合符, *gōfu*).

4.3.2.1 Abbreviated Characters (略字, *ryakuji*)

Abbreviated Characters (略字, *ryakuji*; also called 簡略字, *jiǎnlüèzì* in Chinese) found in the manuscript are generally normalized to their standard, common forms in the transcribed data.

Examples: (The left side shows the abbreviated form found in the manuscript, and the right side shows the normalized character used in the data.) 1. 𠂇 → 音 (*on*) 2. 𠂇 → 也 (*nari, ya*) 3. 𠂇 → 從 (*jū, shitagau*) 4. 𠂇 → 於 (*o, okeru*) 5. 𠂇 → 反 (*han*; as in *fanqie* 反切) 6. 禾 → 和 (*wa*; as in *Wa-on* 和音, an older layer of Sino-Japanese pronunciation) 7. 谷 → 俗 (*zoku*) (but see note below) 8. 𠂇 → 物 (*butsu, mono*) 9. 𠂇 → 類 (*ruì*) 10. 𠂇 → 歟 (*yo, ka*) 11. 𠂇 → 訓 (*kun*)

Among these, examples 1 through 4 are illustrated in the prefatory notes (凡例, *hanrei*) of the *Myōgishō* in a section explaining “注中多略用片” (meaning “in the glosses, abbreviated forms, often single components of characters [like radicals or katakana], are frequently used”).

Example 1 (𠂇 for 音 ‘sound/pronunciation’), Example 5 (𠂇 for 反 ‘reversal’, used in *fanqie* spellings), and Example 6 (禾 for 和 ‘harmony/Japanese’, used to denote *Go-on* (和音, *Wa-on*) pronunciations) are frequently used in **Phonetic Glosses**.

Example 7 (谷 for 俗) is frequently used in **Notes on Character Form** (to mean ‘popular/vulgar’ form), and example 8 (𠂇 for 物) is frequently used in **Japanese Native Readings (wakun)**. However, ‘谷’ can also be used with its inherent meaning (“valley”). In such cases, it is transcribed as ‘谷’ and not normalized to ‘俗’. For instance, **Headwords** containing ‘谷’ as a component are listed under the ‘八’ (eight) radical section (八部, *hachibu*) of the *Kanchi-in* manuscript. The **Entry** for ‘籬’, for example, has its semantic meaning given in the original text as “大長谷” (large long valley), so ‘谷’ is retained as is.

Example 9 (𠂇 for 類) is used in **Entries** derived from category names in the *Wamyō Ruijushō* (倭名類聚抄), such as “草類” (types of grasses) and “苔類” (types of mosses).

Example 10 (𠂇 for 歟) is used in notes expressing doubt or questioning the correctness of characters or phrases (these are considered types of editorial notes or *ango*).

Example 11, ‘ㄌ’ (for ‘訓’ *kun*), is used in the context of **Japanese Native Readings** (***wakun***). Examples from the transcribed data include: the gloss 訓ㄌ for the **Headword** ‘畫’; 凡訓カラスヘミ for ‘蜃’; 一訓コカヒス for ‘蠶’; and 訓イクサ for ‘師’.

4.3.2.2 Variant Characters (*itaiji*) (異体字)

While care has been taken to input **variant characters** (*itaiji*) used as **Headwords** in a form that is faithful to, or closely approximates, their appearance in the original manuscript, the basic policy for **variant characters** (*itaiji*) appearing within the **Original Glosses** is to normalize them to their common or standard forms.

Examples (Original form → Normalized form): * 厶 → 尼 * 凡 → 凡 * 厶 → 所 * 悉 → 悉 * 脩 → 備

4.3.2.3 Iteration Marks (踊り字, *odoriji*)

For **Kanji Iteration Marks** (踊り字, *odoriji*; also known as 疊字符, *diézhífú* in Chinese), the mark “𐀀” (NINOMAETEN, U+303B) is used, while “々” (DITTO MARK, U+3005) is not.

For iteration marks in Katakana used for **Japanese Native Readings** (**wakun**), the mark “ゝ” (KATAKANA ITERATION MARK, U+30FD) is used.

The marks “<” (KUNOJITEN, U+3031), “/” (KUNOJITEN WITH VOICED SOUND MARK, U+3033), and “\” (KUNOJITEN WITH SEMI-VOICED SOUND MARK, U+3035) are not used; instead, the KATAKANA ITERATION MARK is repeated, such as “ゝゝ”.

Examples: * Example in a **Headword**: 曾／一 (祖) ／𐀀 (母) * Example in a **Japanese Native Reading** (**wakun**): 陽 アタゝカナリ * Example in a **Japanese Native Reading** (**wakun**): 倍 マスゝゝ

4.3.2.4 Substitution Marks (代用符号, *daiyō fugō*)

The **Substitution Marks** (代用符号, *daiyō fugō*), appearing as ‘|’ in **Headwords** that are compound words (熟語, *jukugo*), is a symbol used when substituting for an annotated character (被注字, *hichūji*; also 被釋字, *hishakuji*; i.e., the target character of an annotation) or a previously listed **Headword**. In the data, this ‘|’ mark is input using ‘一’ (CHOONPU - long vowel mark, U+30FC), and the actual character it represents is then input within full-width parentheses ‘ () ’.

When the symbol ‘|’ is used within the **Original Glosses** to indicate the same character as the **Headword**, it is simply input as ‘一’ (CHOONPU - long vowel mark, U+30FC), without an accompanying indication of the character it represents.

Examples: * Examples in **Headwords**: 五／一（人） (here ‘一’ substitutes for ‘人’), ..., 真／人, 漁／一（人）, 海／一（人） * Example in **Original Glosses**: 鄆 邯一縣名 (For the **Headword** ‘鄆’, the gloss “邯一縣名” indicates that “邯一” refers to “邯鄆”, which is a county name.)

4.3.2.5 Compound Marks (合符, *gōfu*)

A **Compound Mark** (合符, *gōfu*; also known as 連字符, *liánzìfú* in some contexts, though originally a vertical linking line in the manuscript) is represented in this dataset by a hyphen-minus (‘-’, U+002D). Examples of its use are relatively rare.

Example: * **Headword**: 嬋 **Original Glosses** (excerpt): 箭(R)賞二音 又煎(L)音 太-白-星

In the **Original Glosses** for the **Headword** ‘嬋’, the notation “太-白-星” appears at the end. In this context, the hyphens function as **Compound Marks**, linking the characters ‘太’, ‘白’, and ‘星’ to form the term “太白星” (*Tàibáixīng*), which refers to the planet Venus.

4.3.3 Additional Notations and Layout Features

Finally, this section addresses various issues related to additional notations and layout features found in the *Myōgishō*. If using the *Myōgishō* as a resource for the historical phonology or lexicology of Japanese, it is particularly important to carefully read the explanations regarding **Tone Marks** (*shōten*), voiced sound marks (濁点, *dakuten*), and nasal sound symbols.

4.3.3.1 Interlinear Notes (割注, *warichū*)

The basic form is *warichū sōgyō* (割注双行; meaning “small character definition in two lines,” comparable to 雙行夾注, *shuāngháng jiāzhù* in Chinese contexts), which are transcribed from right to left according to their original appearance. If an interlinear note extends to three lines, the part judged to be an addition is transcribed last.

4.3.3.2 Variations in the Size of Characters within Original Glosses

There are rare instances where a character within the **Original Glosses** is mistakenly written in a large size, leading to potential confusion with a **Headword**.

Example: * hanzi_entry: 喜 * definition (representing **Original Glosses**): 音喜 (L-H)
又嬉 コノム (LLH) 喜「注也」 ネカフ (further glosses omitted)

In this example, following the **Headword** ‘喜’, the **Original Glosses** provide a **Phonetic Gloss**, a **Note on Character Form** (implicitly, “又嬉” suggesting a variant or related form), and a **Japanese Native Reading (wakun)**. After these, the character ‘喜’ is written in a large size, followed by other **Japanese Native Readings (wakun)** such as ‘ネカフ’. To the right of the large character ‘喜’, there is a note “注也” (*chū nari*; “this is a gloss/annotation”), indicating that ‘喜’ itself functions as a **Semantic Gloss in Chinese** for the **Headword** ‘喜’.

4.3.3.3 **Small Character Annotations (小字注記, shōji chūki)**

Annotations made using small characters are referred to as **Small Character Annotations (小字注記, shōji chūki)**. **Small Character Annotations** are frequently found in **Notes on Character Form (字体注, jitaichū)**; these are specifically termed **Small Character Notes on Character Form (小字字体注記, shōji jitaichūki)**.

There are instances where a **Phonetic Gloss** for a **Hanzi (Chinese character)** used within an **Original Gloss** is itself annotated in an interlinear style (割注形式, *warichū keishiki*); this is termed a **Nested Interlinear Note (再割注, saiwarichū; or 再夾注, zàijiāzhù in Chinese; meaning “smaller character definition in two lines, reapplied”)**.⁴

Additionally, there are cases where a **Semantic Gloss in Chinese** is added in small characters directly below a **Japanese Native Reading (wakun)**; this is termed a **Small Character Semantic Gloss for Wakun (小字和訓義注, shōji wakun gichū)**.

Small Character Annotations are transcribed by enclosing the relevant portion in full-width angle brackets (〈 〉 , U+3008 and U+3009).

Examples: * Example of **Small Character Notes on Character Form**: 又鞞 〈正〉
(Found in the **Notes on Character Form** for the **Headword** ‘削’). * Example of **Nested Interlinear Note**: 從夾 〈公合〉 成恰反 (For the **Headword** ‘陝’, the second character ‘夾’ of the *fanqie* spelling is further glossed with another *fanqie* spelling in small characters). *

⁴ The term 再割注 (*saiwarichū*), or 再夾注 (*zàijiāzhù* in Chinese), implies a “re-application” of an interlinear-style gloss, often to a character already within a gloss.

Example of **Small Character Semantic Gloss for Wakun**: アク〈髪〉 (For the **Headword** ‘結’, this note is attached to the **Japanese Native Reading (wakun)** ‘アク’ to distinguish it from homonyms (開く, 厭く, 挙ぐ) and to indicate the meaning of tying up ‘hair’ (髪)).

Cases where what should have been a **Small Character Semantic Gloss for Wakun** was mistakenly written in the same large size as the main **Original Glosses** are transcribed using 〈 〉, and a note to this effect is made in the **remarks** column (as a **Compiler's Remark**).

The following examples are shown in the order of **Headword**, **Japanese Native Reading (wakun)** (including the erroneously large annotation transcribed within 〈 〉), and **Compiler's Remarks**.

Examples: * **Headword**: 展 **Japanese Native Reading (wakun)**: ヒロク 〈眉〉 **Compiler's Remarks**: The annotation 〈眉〉 is written in a large size. * **Headword**: 度 **Japanese Native Reading (wakun)**: トコ 〈床〉 **Compiler's Remarks**: The semantic gloss is written in a large size.

4.3.3.4 Annotations from Variant Manuscripts (異本注記, *ihon chūki*)

Annotations from Variant Manuscripts (異本注記, *ihon chūki*) can pertain to either the **Headword** or the **Original Glosses**.

Annotations from Variant Manuscripts pertaining to a **Headword** are indicated by a preceding ‘▲’ (U+25B2 BLACK UP-POINTING TRIANGLE) followed by the content of the annotation enclosed in Japanese quotation marks 「 」。

Annotations from Variant Manuscripts pertaining to the **Original Glosses** are enclosed in full-width parentheses (), U+FF08 and U+FF09. They are shown in the format: *original character(s) in the gloss - annotation from the variant manuscript*.

The symbol representing an “annotation from a variant manuscript” itself (異本注記) is often the Katakana character ‘イ’ (which might be a part of the ‘他’ character in ‘他本’, *tahon*, meaning “other manuscript,” or simply represent ‘異’).

Examples: * **Annotation from Variant Manuscripts** (for a **Headword**): ▲ 艾「艾」 *

Annotation from Variant Manuscripts (for a **Headword**): ▲ 捺「□才奈イ」 *

Annotation from Variant Manuscripts (for **Original Glosses**): 責猛 (猛-□イ孟イ)
二音

4.3.3.5 Source Attributions (出典注記, *shutten chūki*)

Book titles or personal names indicating a source are enclosed in double angle brackets (《 》, U+300A and U+300B).

Examples: 1. Example of a personal name: 齟 《王右軍》作 (Here, 《王右軍》 *Ō Ugun* [Wang Youjun] indicates the person who created or used this form/reading). 2. Example of a personal name: 𪛗 ◇ 《弘法大師》又云 (Here, ◇ indicates a note in literary Chinese placed to the right of the **Headword**, and 《弘法大師》 *Kōbō Daishi* is the cited person). 3. Example of a book title: 它 可見 《類音決》 (Here, 《類音決》 *Ruionketsu* is the cited book title, meaning “can be seen in the *Ruionketsu*”). 4. Example of a book title: 𪛗 《大日經疏》云丁也反 (Here, 《大日經疏》 *Dainichikyōsho* is the cited book title, followed by a *fanqie* spelling).

In example 2, the ‘◇’ mark indicates that this is an annotation in literary Chinese placed to the right of the **Headword**.

4.3.3.6 Tone Marks (*shōten*) (声点)

Since **Tone Marks** (*shōten*) are a feature of great interest to users of the *Myōgishō* data, they are explained in detail here.

In the published data, the transcription of the **Original Glosses** is recorded in the `definition_elements` column of the `krm_notes` file. By loading `krm_notes.tsv` into a spreadsheet program like Excel and filtering the `definition_type_name` column for “**Phonetic Gloss**” or “**Japanese Native Reading** (*wakun*)”, users can extract the relevant information.

Types of Tone Marks (*shōten*)

Tone Marks (*shōten*) are indicated by the abbreviations shown in parentheses: Ping/Even (L), Shang/Rising (H), Qu/Departing (R), Ru/Entering (S), Ping-Qing/Even-Light (F), and Ru-Qing/Entering-Light (T). The identification of light tones (輕声, *keishō*) is provisional.

If the position of a **Tone Mark** (*shōten*) is difficult to determine, a question mark “?” is added to indicate this uncertainty.

Voiced sound marks and nasal sound symbols are often displayed concurrently with **Tone Marks** (*shōten*), so they are explained next.

Voiced Sounds (濁音, *dakuon*)

The voiced sound mark (濁音符号, *dakuon fugō*), indicated by double dots (゛) in the original, is represented by the English letter ‘V’ (U+0056) in the data.

Nasal Sound Symbols (鼻音符号, *bion fugō*)

The nasal sound symbol (鼻音符号, *bion fugō*; also 鼻音符, *bíyīnfú* in Chinese) is represented by the English letter ‘N’ (U+004E) in the data. In the manuscript, nasal sound symbols appear in forms such as √, v, ㄣ, or ㄣ. If it is necessary to refer to the specific shape of a nasal sound symbol, the check mark ‘√’ (U+2713) is used for explanatory purposes.

Multiple Tone Marks (*shōten*)

When multiple **Tone Marks** (*shōten*) are present, they are listed in the following order: Ping/Even (L) → Ping-Qing/Even-Light (F) → Shang/Rising (H) → Qu/Departing (R) → Ru-Qing/Entering-Light (T) → Ru/Entering (S). They are separated by a hyphen-minus (‘-’, U+002D).

Types of Phonetic Glosses

There are three types of **Phonetic Glosses**: * **Fanqie spellings** (反切, *hansetsu* or *fanqie*), * **Similar sound notes** (類音注, *ruion-chū*; annotations indicating similar pronunciations by character), and * **Kana glosses** (仮名音注, *kana-onchū*; phonetic annotations in kana).

Tone marks (*shōten*) and voiced sound indications using double-dot **Tone marks** (*shōten*) (i.e., *dakuten* represented via *shōten* placement) can be applied to **Fanqie spellings**, **Similar sound notes**, and **Kana glosses**. Nasal sound symbols are applied to **Kana glosses**.

Types of Japanese Native Readings (*wakun*)

Japanese Native Readings (*wakun*) are generally written in Katakana.

The only exception is for ‘木賊’ (*tokusa*), where the *Man’yōgana* ‘度久佐’ (*tokusa*) is used; this instance does not have **Tone marks** (*shōten*) applied.

Japanese Native Readings (*wakun*) can have **Tone marks** (*shōten*) and voiced sound indications (using double-dot *shōten*) applied. There is one recognized, though not entirely certain, instance of a nasal sound symbol being applied to a **Japanese Native Reading** (*wakun*) (a nasal sound symbol on ‘ナ’ in the *wakun* ‘ナラフ’ for the character ‘儔’).

Input and Processing Methods for **Tone Marks** (*shōten*), Voiced Sound Marks, and Nasal Sound Symbols

Tone Marks (*shōten*) and voiced sound indications (using double-dot *shōten*) are applied to **Hanzi** (Chinese characters) or to **Japanese Native Readings** (*wakun*) written in Katakana. Nasal sound symbols are applied to **Phonetic Glosses** in Katakana (i.e., **Kana glosses**) or to **Japanese Native Readings** (*wakun*) in Katakana.

For **Fanqie spellings** (反切, *hansetsu*), which consist of an initial character (反切上字, *hansetsu jōji*) and a final character (反切下字, *hansetsu kaji*), any applied **Tone Marks** (***shōten***) are converted to their corresponding symbols (e.g., L, H) and enclosed in full-width parentheses () .

Similar sound notes (類音注, *ruion-chū*) are also enclosed in full-width parentheses () .

Kana glosses (仮名音注, *kana-onchū*), when written in small characters around *fanqie* spellings or similar sound notes, are enclosed in Japanese quotation marks 「 」 . However, if a **Kana gloss** is explicitly prefixed with “呉” (*Go*, for Go-on) or “和” (*Wa*, for Wa-on) within the main text of the **Original Glosses**, the quotation marks 「 」 are omitted.

For **Phonetic Glosses**, **Tone Marks** (***shōten***), voiced sound marks, and nasal sound symbols are recorded on a per-Hanzi (Chinese character) basis (i.e., for each single character). For **Japanese Native Readings** (***wakun***), these marks are recorded for the entire word or phrase.

Partial Application of Tone Marks (***shōten***)

If **Tone Marks** (***shōten***) are applied to only a part of a **Japanese Native Reading** (***wakun***), the parts without **Tone Marks** (***shōten***) are indicated by a half-width underscore (‘_’, U+005F). (This typically means **Hanzi** (Chinese characters) are treated one by one, while a *wakun* is treated as a whole unit for tone marking, with underscores for unmarked morae/syllables if only part of it is marked).

Examples: 1. 偵 勅令 (R) 反 2. 使 所里 (H) 所使 (H) 二反 3. 健 達 (S) 音 4. 健 輦 (H) 練 (R) 二音 5. 偶 音藕 (HV) 「コウ」 6. 侮 音武 (L-HV) 「フ」 「ム (H) 」 7. 拱 呉 音恐 (L) 8. 捉 呉冊 (S) サク (L) 9. 類 和ルイ (L) 10. 形 和キヤウ (N_H-N)

Examples 1 and 2 are **Fanqie spellings**. Examples 3 and 4 are **Similar sound notes**. Examples 5 and 6 are **Similar sound notes** accompanied by **Kana glosses**.

Examples 7 and 8 are *Go-on* (呉音) readings; example 7 is a **Similar sound note**, while example 8 is a **Similar sound note** accompanied by a **Kana gloss**.

Examples 9 and 10 are *Wa-on* (和音) readings; example 9 has **Tone Marks** (***shōten***) recorded, while example 10 has both **Tone Marks** (***shōten***) and nasal sound symbols.

“Regarding **Tone Marks** (***shōten***), while distinguishing between those written in red ink (朱点, *shuten* – also referred to by some specialists as **Vermilion Glosses**) and those written in black ink (墨点, *bokuten*) is important, this distinction has not been made in the current data input, since **Tone Marks** are applied in red ink in the vast majority of cases.

Rare exceptions using a black dot (墨星点, *bokuseiten*) or black ring (墨圈点, *bokuenten*) do occur, and these have been noted in the `remarks` column of `krm_notes.tsv`.”

4.3.3.7 *Morphosyntactic Glosses (wokototen) (ヲコト点)*

No definitive examples of *Morphosyntactic Glosses (wokototen)* have been confirmed in the manuscript at this time. Should any definitive examples be identified, they will be transcribed using Hiragana.

This may be an example of a *wokototen*.

- `kazama_location`: K06013430, `hanzi_entry`: 王, `definition`: 音夙 (T) 「シク」 又栗 (T) 「リク」 又欣救反 琢「ミカク」玉を工也, `remarks`: Ikeda's note: The character '栗' is a mistake for '栗'. The vermilion dot on the character '玉' may be the *wokototen* mark for 'wo (を)'. Although '工也' is written in small characters, it has been transcribed in large characters because the *Guangyun* provides an explanatory note for the meaning '琢玉工' (a jade craftsman).

4.3.3.8 *Line Breaks and Spacing (改行・空白, kaigyō/kūhaku)*

Line breaks as they appear in the original manuscript are not explicitly represented in the transcribed data. Spacing in the data reflects the results of interpretation rather than an exact reproduction of the original manuscript's spacing.

4.3.3.9 *Interpolated Glosses (補入注文, honyū chūmon)*

Interpolated Glosses (補入注文, *honyū chūmon*) are inserted at positions deemed appropriate based on textual analysis.

4.3.3.10 *Unannotated Entries (無注記, muchūki)*

When an *Entry* has no *Original Glosses*, this is indicated by “ (無) ” (using full-width parentheses).

4.3.3.11 *Supplementary Headword Annotations (掲出字補注, keishutsuji hochū)*

Annotations applied directly to a *Headword* are referred to as *Supplementary Headword Annotations* (掲出字補注, *keishutsuji hochū*). These include *Tone marks (shōten)* and Katakana phonetic annotations directly applied to the *Headword* to indicate Sino-Japanese readings; side-line *kun* readings (傍訓, *bōkun*) and *kaeriten* marks (返点, *kaeriten*) directly applied to the *Headword* to indicate Japanese native readings and reading order; and annotations from variant manuscripts found at the end of the *Original Glosses* (but pertaining to the *Headword*). These will be explained together here.

Tone Marks (shōten) and Katakana Phonetic Annotations for Headwords

Tone marks (*shōten*) and Katakana phonetic script applied to a **Headword** to indicate its Sino-Japanese reading are transcribed at the beginning of the **Original Glosses**. They are preceded by a double circle (◎, U+25CE) and the annotated character (被注字, *hichūji*), followed immediately by the annotation. **Tone marks (*shōten*)** are represented by their abbreviations within full-width parentheses () , and Katakana phonetic script is enclosed in Japanese quotation marks 「 」 .

Side-Line Kun Readings, Kaeriten Marks, and Other Annotations for Headwords

*Side-line kun** readings* (傍訓, *bōkun*) and *kaeriten* marks applied to a **Headword** to indicate its Japanese native reading and reading order are transcribed immediately following the annotated character, preceded by a bullseye mark (◎, U+29BF) and the annotated character, and enclosed in 「 」 . Annotations in literary Chinese (such as **Fanqie spellings**, **Semantic Glosses in Chinese**, **Notes on Character Form**, or **Source Attributions**) applied to a **Headword** are transcribed immediately following the annotated character, preceded by a lozenge/diamond mark (◇, U+25C7) and the annotated character, and enclosed in 「 」 . **Annotations from Variant Manuscripts** applied to a **Headword** are transcribed immediately following the annotated character, preceded by a black up-pointing triangle (▲, U+25B2) and the annotated character, and enclosed in 「 」 .

Annotations from Variant Manuscripts at the End of Original Glosses

Annotations from Variant Manuscripts pertaining to the **Headword** but added at the end of the **Original Glosses** are indicated by a preceding ‘▲’ at the end of the glosses, with the content of the annotation enclosed in 「 」 .

Order of Transcription

If it is necessary to transcribe multiple types of **Supplementary Headword Annotations** for a single **Headword**, they are recorded in the following order: ◎ Sino-Japanese reading information, ◎ Japanese native reading information / reading order marks, ◇ Annotations in literary Chinese, ▲ Annotations from variant manuscripts.

Examples: * ◎純「ト (L) シ (H) 」 * ◎風「キサ、」 * ◇𠄎惟乃「手歟」 * ▲𠄎骨石辛「𠄎イ」

4.3.3.12 Other Noteworthy Cases

Decipherment Notes (判読注, *handoku-chū*)

A compiler’s decipherment note (解讀注記, *jiědú zhùjì* in Chinese) may be indicated by enclosing it in parentheses ().

Example: * 𠂔𠂔𠂔𠂔𠂔 オチイル (L__、ホを見消してチ) (This *hanzi_entry* (𠂔𠂔𠂔𠂔𠂔 夕) is followed by its *Japanese Native Reading* (**wakun**) ‘オチイル’ with *Tone Marks* and a decipherment note “ホを見消してチ” [meaning “‘ホ’ is deleted and replaced by ‘チ’”].)

For this example, the following content would be recorded in the *remarks* column (as a *Compiler's Remark*):

- *remarks*: Masamune’s Index, under ‘オホ (-ヒ) チイル’, notes: “‘ホ (-ヒ)’ is a mark indicating ‘ホ’ was deleted. Should it be ‘オチイル’?” Kusakawa’s *Wakun Shūsei* records ‘オホ’ and ‘チイル’ separately. Mochizuki’s *Wakun Shūsei* records ‘オチイル’. Ikeda’s note: Follow Masamune and Mochizuki.

Fanqie Spellings within Headwords

If a *Fanqie* spelling is inserted within a *Multi-Character Form Headword* (typically an idiom/compound), a forward slash ‘/’ (half-width slash) is used to indicate the separation.

Example: * 櫛一 (棗) 人充 / ノナツメ (_HHH)

In this example, which shows the *Headword* followed by its *Original Glosses*, the *Fanqie* spelling “人充” is written directly beneath ‘櫛’ (the first part of the *Headword* ‘櫛一 (棗)’).

Japanese Native Readings (*wakun*) Attached to Hanzi (Chinese characters) within Original Glosses

Small Katakana characters (representing *Japanese Native Readings* (*wakun*)) attached to a *Hanzi* (Chinese character) within the *Original Glosses* are transcribed as is, enclosed in Japanese quotation marks 「」. If such a *wakun* is written in even smaller characters (小字, *shōji*), it is enclosed in full-width angle brackets 〈〉. Examples of the latter are rare.

Examples: 1. 琢「ミカク」玉工也 2. 圈〈ヲリ〉 3. 一「タヘ」「平歟」 跣「ハシル」 追「ヲオフ」 蹤「ニクルヲ」

Example 1 is seen within the *Original Glosses* for the *Headword* ‘王’; the *Japanese Native Reading* (*wakun*) ‘ミカク’ is attached to the right side of the character ‘琢’.

Example 2 is seen within the *Original Glosses* for the *Headword* ‘檻’; the *Japanese Native Reading* (*wakun*) is attached below ‘圈’ in small characters.

Example 3 is seen within the **Original Glosses** for the **Headword** 要. It shows example sentences (or phrases) and their **Japanese Native Readings** (*wakun*).

5 Basic Principles for Creating Annotations/Commentary

This chapter is part of the Core Documentation. It explains the annotation principles and evidence categories used throughout KRM.

The scholarly apparatus for the *Myōgishō* in this database includes elements such as **Textual Collation** (*kōkan*), **Source Criticism** (*shutten kōshō*, 出典考証), **Review of Previous Scholarship** (*kenkyūshi seiri*), **Lexical Analysis** (*goshaku*), and **Additional Expositions** (*yosetsu*). The content of each is explained as follows:

- **Textual Collation** (校勘, *kōkan*): Involves presenting textual variants by comparing the *Myōgishō* text with the main texts of other manuscripts and with fragmentary textual evidence (逸文, *itsubun*), conducting comparative analyses, correcting scribal errors, and reconstructing the original text.
- **Source Criticism** (出典考証, *shutten kōshō*): Entails searching for original sources cited in the *Myōgishō*, analyzing citation methods, and clarifying distinctions between direct and indirect (second-hand) citations.
- **Review of Previous Scholarship** (研究史整理, *kenkyūshi seiri*): Summarizes and introduces the views and findings of previous scholars.
- **Lexical Analysis** (語釈, *goshaku*): Consists of philological analysis concerning semantic meanings, phonology, and orthography of words and characters.
- **Additional Expositions** (余説, *yosetsu*): These are the annotator's (i.e., the database compiler's) own detailed discussions and considerations based on the analysis of specific **Entries** or elements within them.

Ideally, annotations should be concise and clear. However, as a preliminary step, it is necessary to gather as much relevant material as possible for a given annotation. Only after this preparatory stage is complete can the work of selecting and refining the collected materials begin.

The materials collected to date are recorded as **Compiler's Remarks** in the **remarks** column of the `krm_notes` file.

In this document, we will first classify the **Entries** of the *Myōgishō* by their **Headwords** and the various types of **Original Glosses** they contain, and then present the quantities for each category. Based on this, we will consider the priority for creating annotations for each type of **Headword** and each category of **Original Gloss** element, focusing our primary analytical efforts on **Japanese Native Readings (wakun)** and **Phonetic Glosses**. This will clarify the **basic principles for annotation creation and the primary subjects of analysis**.

Next, we will provide and explain specific examples of scribal errors, omissions, and superfluous characters (衍字, *enji*). We will also describe how such information is

recorded in the **Compiler's Remarks** and conduct a **calculation of the number of Headword characters**.

For **Notes on Character Form** (字体注, *jitaichū*), we will organize their **types and descriptive formats**. By clarifying the content and format of these original notes, we aim to minimize the need for extensive commentary on them within the **Compiler's Remarks**.

Regarding **Semantic Glosses in Chinese** (義注, *gichū*), we will indicate their **types and quantities**, and introduce examples of such glosses that have been mistakenly identified as katakana.

For **Japanese Native Readings** (和訓, *wakun*), given the extensive body of previous research, we will provide a list of these studies and the abbreviations used for them in the **Compiler's Remarks**. This will serve as an introduction to the **foundational materials for annotating wakun**.

Finally, using page 62 of the *Butsujō* (仏上) volume of the Kanchi-in manuscript of the *Ruiju Myōgishō* as a **specific example of annotation practice**, we will introduce the content of the **Compiler's Remarks**. This will demonstrate how subtle differences in **Hanzi** (Chinese character) glyph forms can be explained in the annotations through the use of GlyphWiki.

5.1 Basic Principles and Analytical Focus for Annotation Creation

This section provides an overview of the structure of **Entries** and the approximate number of **Original Glosses**. It then outlines the basic principles for creating annotations, using a single **Entry** as an example for illustration.

5.1.1 Entry Structure and Number of Original Glosses

An **Entry** consists of a **Headword** and **Original Glosses**.

The **Original Glosses** are further composed of elements such as **Phonetic Glosses**, **Semantic Glosses in Chinese**, **Japanese Native Readings (*wakun*)**, **Notes on Character Form**, and **Other** information.

The structure of an **Entry** is illustrated in the diagram below. For reference, the approximate number of **Entries** and the count for each type of **Original Gloss** element are also indicated. The total number of **Original Gloss** elements is approximately 86,800.

```

{{< mermaid title="Entry Structure" >}} graph TB
  A(Entry) --> B(Headword);
  B --- I(["Approx. 32,600 Entries"]);
  A --> C(Original Glosses);
  C --> D(Notes on Character Form);
  D --- K(["Approx. 13,400"]);
  C --> E(Phonetic Glosses);
  E --- L(["Approx. 24,100"]);
  C --> F(Semantic Glosses in Chinese);
  F --- M(["Approx. 12,600"]);
  C --> G(Japanese Native Readings);
  G --- N(["Approx. 35,400"]);
  C --> H(Other);
  H --- O(["Approx. 1,300"]);
  {{< /mermaid >}}

```

Note: In the diagram, "Japanese Native Readings" refers to the term Japanese Native Readings (*wakun*) used throughout this documentation.

5.1.2 Understanding the Main Text

5.1.2.1 Example of an Entry

Let's examine the content of an **Entry** using '覲' as an example.

```

Headword: 覲
Original Glosses: 音僅 (R)   ミル (LH)   マミユ (HLH)   和後ン (_L)
Elements of Original Glosses:
  Phonetic Gloss: 音僅 (R)
  Japanese Native Reading (*wakun*): ミル (LH)
  Japanese Native Reading (*wakun*): マミユ (HLH)
  Phonetic Gloss: 和後ン (_L)

```

In this **Entry**, for the single **Headword** '覲', two **Phonetic Glosses** and two **Japanese Native Readings** (*wakun*) are provided.

Below, we will provide some explanation for the **Headword**, **Phonetic Glosses**, and **Japanese Native Readings** (*wakun*) in order.

5.1.2.2 Headword

Although the **Headword** is transcribed as '覲', its actual glyph form in the original

manuscript, when reproduced using GlyphWiki, appears as: 覲.

Information on the character '覲' in GlyphWiki can be found at

<https://glyphwiki.org/wiki/u50c5>. Various glyphs are registered there; if the desired glyph is available, it can be used. If not, one can create and register a new glyph.

Glyphs in HDIC (Integrated Database of Hanzi Dictionaries in Early Japan) typically begin with the prefix `hdic-`. For the Kanchi-in manuscript of the *Ruiju Myōgishō*, an additional `hkrm-` is appended, followed by an 8-digit number indicating its location information to form the GlyphWiki glyph name.

覲

Regarding the glyph 覲, searching for ‘覲’ in the HNG (Hanzi Normative Glyphs Database) at <https://search.hng-data.org/search> confirms that an example exists in the Ueno manuscript of the *Hanshu* (Book of Han), specifically in the *Yang Xiong* (楊雄) section.

When creating annotations related to **Headwords**, it may be necessary to create and display glyphs using GlyphWiki, or to create and display cropped images from the original manuscript.

However, for text-based annotation creation, such visual representations can reduce readability. Therefore, using the IDS (Ideographic Description Sequence) method is often

覲

more practical. The aforementioned glyph 覲 can be represented, for example, as 𠂇𠂉𠂊𠂋𠂌𠂍𠂎𠂏𠂐𠂑𠂒𠂓𠂔𠂕𠂖𠂗𠂘𠂙𠂚𠂛𠂜𠂝𠂞𠂟𠂠𠂡𠂢𠂣𠂤𠂥𠂦𠂧𠂨𠂩𠂪𠂫𠂬𠂭𠂮𠂯𠂰𠂱𠂲𠂳𠂴𠂵𠂶𠂷𠂸𠂹𠂺𠂻𠂼𠂽𠂾𠂿𠃀𠃁𠃂𠃃𠃄𠃅𠃆𠃇𠃈𠃉𠃊𠃋𠃌𠃍𠃎𠃏𠃐𠃑𠃒𠃓𠃔𠃕𠃖𠃗𠃘𠃙𠃚𠃛𠃜𠃝𠃞𠃟𠃠𠃡𠃢𠃣𠃤𠃥𠃦𠃧𠃨𠃩𠃪𠃫𠃬𠃭𠃮𠃯𠃰𠃱𠃲𠃳𠃴𠃵𠃶𠃷𠃸𠃹𠃺𠃻𠃼𠃽𠃾𠃿𠄀𠄁𠄂𠄃𠄄𠄅𠄆𠄇𠄈𠄉𠄊𠄋𠄌𠄍𠄎𠄏𠄐𠄑𠄒𠄓𠄔𠄕𠄖𠄗𠄘𠄙𠄚𠄛𠄜𠄝𠄞𠄟𠄠𠄡𠄢𠄣𠄤𠄥𠄦𠄧𠄨𠄩𠄪𠄫𠄬𠄭𠄮𠄯𠄰𠄱𠄲𠄳𠄴𠄵𠄶𠄷𠄸𠄹𠄺𠄻𠄼𠄽𠄾𠄿𠅀𠅁𠅂𠅃𠅄𠅅𠅆𠅇𠅈𠅉𠅊𠅋𠅌𠅍𠅎𠅏𠅐𠅑𠅒𠅓𠅔𠅕𠅖𠅗𠅘𠅙𠅚𠅛𠅜𠅝𠅞𠅟𠅠𠅡𠅢𠅣𠅤𠅥𠅦𠅧𠅨𠅩𠅪𠅫𠅬𠅭𠅮𠅯𠅰𠅱𠅲𠅳𠅴𠅵𠅶𠅷𠅸𠅹𠅺𠅻𠅼𠅽𠅾𠅿𠆀𠆁𠆂𠆃𠆄𠆅𠆆𠆇𠆈𠆉𠆊𠆋𠆌𠆍𠆎𠆏𠆐𠆑𠆒𠆓𠆔𠆕𠆖𠆗𠆘𠆙𠆚𠆛𠆜𠆝𠆞𠆟𠆠𠆡𠆢𠆣𠆤𠆥𠆦𠆧𠆨𠆩𠆪𠆫𠆬𠆭𠆮𠆯𠆰𠆱𠆲𠆳𠆴𠆵𠆶𠆷𠆸𠆹𠆺𠆻𠆼𠆽𠆾𠆿𠇀𠇁𠇂𠇃𠇄𠇅𠇆𠇇𠇈𠇉𠇊𠇋𠇌𠇍𠇎𠇏𠇐𠇑𠇒𠇓𠇔𠇕𠇖𠇗𠇘𠇙𠇚𠇛𠇜𠇝𠇞𠇟𠇠𠇡𠇢𠇣𠇤𠇥𠇦𠇧𠇨𠇩𠇪𠇫𠇬𠇭𠇮𠇯𠇰𠇱𠇲𠇳𠇴𠇵𠇶𠇷𠇸𠇹𠇺𠇻𠇼𠇽𠇾𠇿𠈀𠈁𠈂𠈃𠈄𠈅𠈆𠈇𠈈𠈉𠈊𠈋𠈌𠈍𠈎𠈏𠈐𠈑𠈒𠈓𠈔𠈕𠈖𠈗𠈘𠈙𠈚𠈛𠈜𠈝𠈞𠈟𠈠𠈡𠈢𠈣𠈤𠈥𠈦𠈧𠈨𠈩𠈪𠈫𠈬𠈭𠈮𠈯𠈰𠈱𠈲𠈳𠈴𠈵𠈶𠈷𠈸𠈹𠈺𠈻𠈼𠈽𠈾𠈿𠉀𠉁𠉂𠉃𠉄𠉅𠉆𠉇𠉈𠉉𠉊𠉋𠉌𠉍𠉎𠉏𠉐𠉑𠉒𠉓𠉔𠉕𠉖𠉗𠉘𠉙𠉚𠉛𠉜𠉝𠉞𠉟𠉠𠉡𠉢𠉣𠉤𠉥𠉦𠉧𠉨𠉩𠉪𠉫𠉬𠉭𠉮𠉯𠉰𠉱𠉲𠉳𠉴𠉵𠉶𠉷𠉸𠉹𠉺𠉻𠉼𠉽𠉾𠉿𠊀𠊁𠊂𠊃𠊄𠊅𠊆𠊇𠊈𠊉𠊊𠊋𠊌𠊍𠊎𠊏𠊐𠊑𠊒𠊓𠊔𠊕𠊖𠊗𠊘𠊙𠊚𠊛𠊜𠊝𠊞𠊟𠊠𠊡𠊢𠊣𠊤𠊥𠊦𠊧𠊨𠊩𠊪𠊫𠊬𠊭𠊮𠊯𠊰𠊱𠊲𠊳𠊴𠊵𠊶𠊷𠊸𠊹𠊺𠊻𠊼𠊽𠊾𠊿𠋀𠋁𠋂𠋃𠋄𠋅𠋆𠋇𠋈𠋉𠋊𠋋𠋌𠋍𠋎𠋏𠋐𠋑𠋒𠋓𠋔𠋕𠋖𠋗𠋘𠋙𠋚𠋛𠋜𠋝𠋞𠋟𠋠𠋡𠋢𠋣𠋤𠋥𠋦𠋧𠋨𠋩𠋪𠋫𠋬𠋭𠋮𠋯𠋰𠋱𠋲𠋳𠋴𠋵𠋶𠋷𠋸𠋹𠋺𠋻𠋼𠋽𠋾𠋿𠌀𠌁𠌂𠌃𠌄𠌅𠌆𠌇𠌈𠌉𠌊𠌋𠌌𠌍𠌎𠌏𠌐𠌑𠌒𠌓𠌔𠌕𠌖𠌗𠌘𠌙𠌚𠌛𠌜𠌝𠌞𠌟𠌠𠌡𠌢𠌣𠌤𠌥𠌦𠌧𠌨𠌩𠌪𠌫𠌬𠌭𠌮𠌯𠌰𠌱𠌲𠌳𠌴𠌵𠌶𠌷𠌸𠌹𠌺𠌻𠌼𠌽𠌾𠌿𠍀𠍁𠍂𠍃𠍄𠍅𠍆𠍇𠍈𠍉𠍊𠍋𠍌𠍍𠍎𠍏𠍐𠍑𠍒𠍓𠍔𠍕𠍖𠍗𠍘𠍙𠍚𠍛𠍜𠍝𠍞𠍟𠍠𠍡𠍢𠍣𠍤𠍥𠍦𠍧𠍨𠍩𠍪𠍫𠍬𠍭𠍮𠍯𠍰𠍱𠍲𠍳𠍴𠍵𠍶𠍷𠍸𠍹𠍺𠍻𠍼𠍽𠍾𠍿𠎀𠎁𠎂𠎃𠎄𠎅𠎆𠎇𠎈𠎉𠎊𠎋𠎌𠎍𠎎𠎏𠎐𠎑𠎒𠎓𠎔𠎕𠎖𠎗𠎘𠎙𠎚𠎛𠎜𠎝𠎞𠎟𠎠𠎡𠎢𠎣𠎤𠎥𠎦𠎧𠎨𠎩𠎪𠎫𠎬𠎭𠎮𠎯𠎰𠎱𠎲𠎳𠎴𠎵𠎶𠎷𠎸𠎹𠎺𠎻𠎼𠎽𠎾𠎿𠏀𠏁𠏂𠏃𠏄𠏅𠏆𠏇𠏈𠏉𠏊𠏋𠏌𠏍𠏎𠏏𠏐𠏑𠏒𠏓𠏔𠏕𠏖𠏗𠏘𠏙𠏚𠏛𠏜𠏝𠏞𠏟𠏠𠏡𠏢𠏣𠏤𠏥𠏦𠏧𠏨𠏩𠏪𠏫𠏬𠏭𠏮𠏯𠏰𠏱𠏲𠏳𠏴𠏵𠏶𠏷𠏸𠏹𠏺𠏻𠏼𠏽𠏾𠏿𠐀𠐁𠐂𠐃𠐄𠐅𠐆𠐇𠐈𠐉𠐊𠐋𠐌𠐍𠐎𠐏𠐐𠐑𠐒𠐓𠐔𠐕𠐖𠐗𠐘𠐙𠐚𠐛𠐜𠐝𠐞𠐟𠐠𠐡𠐢𠐣𠐤𠐥𠐦𠐧𠐨𠐩𠐪𠐫𠐬𠐭𠐮𠐯𠐰𠐱𠐲𠐳𠐴𠐵𠐶𠐷𠐸𠐹𠐺𠐻𠐼𠐽𠐾𠐿𠑀𠑁𠑂𠑃𠑄𠑅𠑆𠑇𠑈𠑉𠑊𠑋𠑌𠑍𠑎𠑏𠑐𠑑𠑒𠑓𠑔𠑕𠑖𠑗𠑘𠑙𠑚𠑛𠑜𠑝𠑞𠑟𠑠𠑡𠑢𠑣𠑤𠑥𠑦𠑧𠑨𠑩𠑪𠑫𠑬𠑭𠑮𠑯𠑰𠑱𠑲𠑳𠑴𠑵𠑶𠑷𠑸𠑹𠑺𠑻𠑼𠑽𠑾𠑿𠒀𠒁𠒂𠒃𠒄𠒅𠒆𠒇𠒈𠒉𠒊𠒋𠒌𠒍𠒎𠒏𠒐𠒑𠒒𠒓𠒔𠒕𠒖𠒗𠒘𠒙𠒚𠒛𠒜𠒝𠒞𠒟𠒠𠒡𠒢𠒣𠒤𠒥𠒦𠒧𠒨𠒩𠒪𠒫𠒬𠒭𠒮𠒯𠒰𠒱𠒲𠒳𠒴𠒵𠒶𠒷𠒸𠒹𠒺𠒻𠒼𠒽𠒾𠒿𠓀𠓁𠓂𠓃𠓄𠓅𠓆𠓇𠓈𠓉𠓊𠓋𠓌𠓍𠓎𠓏𠓐𠓑𠓒𠓓𠓔𠓕𠓖𠓗𠓘𠓙𠓚𠓛𠓜𠓝𠓞𠓟𠓠𠓡𠓢𠓣𠓤𠓥𠓦𠓧𠓨𠓩𠓪𠓫𠓬𠓭𠓮𠓯𠓰𠓱𠓲𠓳𠓴𠓵𠓶𠓷𠓸𠓹𠓺𠓻𠓼𠓽𠓾𠓿𠔀𠔁𠔂𠔃𠔄𠔅𠔆𠔇𠔈𠔉𠔊𠔋𠔌𠔍𠔎𠔏𠔐𠔑𠔒𠔓𠔔𠔕𠔖𠔗𠔘𠔙𠔚𠔛𠔜𠔝𠔞𠔟𠔠𠔡𠔢𠔣𠔤𠔥𠔦𠔧𠔨𠔩𠔪𠔫𠔬𠔭𠔮𠔯𠔰𠔱𠔲𠔳𠔴𠔵𠔶𠔷𠔸𠔹𠔺𠔻𠔼𠔽𠔾𠔿𠕀𠕁𠕂𠕃𠕄𠕅𠕆𠕇𠕈𠕉𠕊𠕋𠕌𠕍𠕎𠕏𠕐𠕑𠕒𠕓𠕔𠕕𠕖𠕗𠕘𠕙𠕚𠕛𠕜𠕝𠕞𠕟𠕠𠕡𠕢𠕣𠕤𠕥𠕦𠕧𠕨𠕩𠕪𠕫𠕬𠕭𠕮𠕯𠕰𠕱𠕲𠕳𠕴𠕵𠕶𠕷𠕸𠕹𠕺𠕻𠕼𠕽𠕾𠕿𠖀𠖁𠖂𠖃𠖄𠖅𠖆𠖇𠖈𠖉𠖊𠖋𠖌𠖍𠖎𠖏𠖐𠖑𠖒𠖓𠖔𠖕𠖖𠖗𠖘𠖙𠖚𠖛𠖜𠖝𠖞𠖟𠖠𠖡𠖢𠖣𠖤𠖥𠖦𠖧𠖨𠖩𠖪𠖫𠖬𠖭𠖮𠖯𠖰𠖱𠖲𠖳𠖴𠖵𠖶𠖷𠖸𠖹𠖺𠖻𠖼𠖽𠖾𠖿𠗀𠗁𠗂𠗃𠗄𠗅𠗆𠗇𠗈𠗉𠗊𠗋𠗌𠗍𠗎𠗏𠗐𠗑𠗒𠗓𠗔𠗕𠗖𠗗𠗘𠗙𠗚𠗛𠗜𠗝𠗞𠗟𠗠𠗡𠗢𠗣𠗤𠗥𠗦𠗧𠗨𠗩𠗪𠗫𠗬𠗭𠗮𠗯𠗰𠗱𠗲𠗳𠗴𠗵𠗶𠗷𠗸𠗹𠗺𠗻𠗼𠗽𠗾𠗿𠘀𠘁𠘂𠘃𠘄𠘅𠘆𠘇𠘈𠘉𠘊𠘋𠘌𠘍𠘎𠘏𠘐𠘑𠘒𠘓𠘔𠘕𠘖𠘗𠘘𠘙𠘚𠘛𠘜𠘝𠘞𠘟𠘠𠘡𠘢𠘣𠘤𠘥𠘦𠘧𠘨𠘩𠘪𠘫𠘬𠘭𠘮𠘯𠘰𠘱𠘲𠘳𠘴𠘵𠘶𠘷𠘸𠘹𠘺𠘻𠘼𠘽𠘾𠘿𠙀𠙁𠙂𠙃𠙄𠙅𠙆𠙇𠙈𠙉𠙊𠙋𠙌𠙍𠙎𠙏𠙐𠙑𠙒𠙓𠙔𠙕𠙖𠙗𠙘𠙙𠙚𠙛𠙜𠙝𠙞𠙟𠙠𠙡𠙢𠙣𠙤𠙥𠙦𠙧𠙨𠙩𠙪𠙫𠙬𠙭𠙮𠙯𠙰𠙱𠙲𠙳𠙴𠙵𠙶𠙷𠙸𠙹𠙺𠙻𠙼𠙽𠙾𠙿𠚀𠚁𠚂𠚃𠚄𠚅𠚆𠚇𠚈𠚉𠚊𠚋𠚌𠚍𠚎𠚏𠚐𠚑𠚒𠚓𠚔𠚕𠚖𠚗𠚘𠚙𠚚𠚛𠚜𠚝𠚞𠚟𠚠𠚡𠚢𠚣𠚤𠚥𠚦𠚧𠚨𠚩𠚪𠚫𠚬𠚭𠚮𠚯𠚰𠚱𠚲𠚳𠚴𠚵𠚶𠚷𠚸𠚹𠚺𠚻𠚼𠚽𠚾𠚿�0�1�2�3�4�5�6�7�8�9𠜀𠜁𠜂𠜃𠜄𠜅𠜆𠜇𠜈𠜉𠜊𠜋𠜌𠜍𠜎𠜏𠜐𠜑𠜒𠜓𠜔𠜕𠜖𠜗𠜘𠜙𠜚𠜛𠜜𠜝𠜞𠜟𠜠𠜡𠜢𠜣𠜤𠜥𠜦𠜧𠜨𠜩𠜪𠜫𠜬𠜭𠜮𠜯𠜰𠜱𠜲𠜳𠜴𠜵𠜶𠜷𠜸𠜹𠜺𠜻𠜼𠜽𠜾𠜿𠝀𠝁𠝂𠝃𠝄𠝅𠝆𠝇𠝈𠝉𠝊𠝋𠝌𠝍𠝎𠝏𠝐𠝑𠝒𠝓𠝔𠝕𠝖𠝗𠝘𠝙𠝚𠝛𠝜𠝝𠝞𠝟𠝠𠝡𠝢𠝣𠝤𠝥𠝦𠝧𠝨𠝩𠝪𠝫𠝬𠝭𠝮𠝯𠝰𠝱𠝲𠝳𠝴𠝵𠝶𠝷𠝸𠝹𠝺𠝻𠝼𠝽𠝾𠝿𠞀𠞁𠞂𠞃𠞄𠞅𠞆𠞇𠞈𠞉𠞊𠞋𠞌𠞍𠞎𠞏𠞐𠞑𠞒𠞓𠞔𠞕𠞖𠞗𠞘𠞙𠞚𠞛𠞜𠞝𠞞𠞟𠞠𠞡𠞢𠞣𠞤𠞥𠞦𠞧𠞨𠞩𠞪𠞫𠞬𠞭𠞮𠞯𠞰𠞱𠞲𠞳𠞴𠞵𠞶𠞷𠞸𠞹𠞺𠞻𠞼𠞽𠞾𠞿𠟀𠟁𠟂𠟃𠟄𠟅𠟆𠟇𠟈𠟉𠟊𠟋𠟌𠟍𠟎𠟏𠟐𠟑𠟒𠟓𠟔𠟕𠟖𠟗𠟘𠟙𠟚𠟛𠟜𠟝𠟞𠟟𠟠𠟡𠟢𠟣𠟤𠟥𠟦𠟧𠟨𠟩𠟪𠟫𠟬𠟭𠟮𠟯𠟰𠟱𠟲𠟳𠟴𠟵𠟶𠟷𠟸𠟹𠟺𠟻𠟼𠟽𠟾𠟿�0�1�2�3�4�5�6�7�8�9𠡀𠡁𠡂𠡃𠡄𠡅𠡆𠡇𠡈𠡉𠡊𠡋𠡌𠡍𠡎𠡏𠡐𠡑𠡒𠡓𠡔𠡕𠡖𠡗𠡘𠡙𠡚𠡛𠡜𠡝𠡞𠡟𠡠𠡡𠡢𠡣𠡤𠡥𠡦𠡧𠡨𠡩𠡪𠡫𠡬𠡭𠡮𠡯𠡰𠡱𠡲𠡳𠡴𠡵𠡶𠡷𠡸𠡹𠡺𠡻𠡼𠡽𠡾𠡿𠢀𠢁𠢂𠢃𠢄𠢅𠢆𠢇𠢈𠢉𠢊𠢋𠢌𠢍𠢎𠢏𠢐𠢑𠢒𠢓𠢔𠢕𠢖𠢗𠢘𠢙𠢚𠢛𠢜𠢝𠢞𠢟𠢠𠢡𠢢𠢣𠢤𠢥𠢦𠢧𠢨𠢩𠢪𠢫𠢬𠢭𠢮𠢯𠢰𠢱𠢲𠢳𠢴𠢵𠢶𠢷𠢸𠢹𠢺𠢻𠢼𠢽𠢾𠢿�0�1�2�3�4�5�6�7�8�9𠤀𠤁𠤂𠤃𠤄𠤅𠤆𠤇𠤈𠤉𠤊𠤋𠤌𠤍𠤎𠤏𠤐𠤑𠤒𠤓𠤔𠤕𠤖𠤗𠤘𠤙𠤚𠤛𠤜𠤝𠤞𠤟𠤠𠤡𠤢𠤣𠤤𠤥𠤦𠤧𠤨𠤩𠤪𠤫𠤬𠤭𠤮𠤯𠤰𠤱𠤲𠤳𠤴𠤵𠤶𠤷𠤸𠤹𠤺𠤻𠤼𠤽𠤾𠤿𠥀𠥁𠥂𠥃𠥄𠥅𠥆𠥇𠥈𠥉𠥊𠥋𠥌𠥍𠥎𠥏𠥐𠥑𠥒𠥓𠥔𠥕𠥖𠥗𠥘𠥙𠥚𠥛𠥜𠥝𠥞𠥟𠥠𠥡𠥢𠥣𠥤𠥥𠥦𠥧𠥨𠥩𠥪𠥫𠥬𠥭𠥮𠥯𠥰𠥱𠥲𠥳𠥴𠥵𠥶𠥷𠥸𠥹𠥺𠥻𠥼𠥽𠥾𠥿𠦀𠦁𠦂𠦃𠦄𠦅𠦆𠦇𠦈𠦉𠦊𠦋𠦌𠦍𠦎𠦏𠦐𠦑𠦒𠦓𠦔𠦕𠦖𠦗𠦘𠦙𠦚𠦛𠦜𠦝𠦞𠦟𠦠𠦡𠦢𠦣𠦤𠦥𠦦𠦧𠦨𠦩𠦪𠦫𠦬𠦭𠦮𠦯𠦰𠦱𠦲𠦳𠦴𠦵𠦶𠦷𠦸𠦹𠦺𠦻𠦼𠦽𠦾𠦿𠧀𠧁𠧂𠧃𠧄𠧅𠧆𠧇𠧈𠧉𠧊𠧋𠧌𠧍𠧎𠧏𠧐𠧑𠧒𠧓𠧔𠧕𠧖𠧗𠧘𠧙𠧚𠧛𠧜𠧝𠧞𠧟𠧠𠧡𠧢𠧣𠧤𠧥𠧦𠧧𠧨𠧩𠧪𠧫𠧬𠧭𠧮𠧯𠧰𠧱𠧲𠧳𠧴𠧵𠧶𠧷𠧸𠧹𠧺𠧻𠧼𠧽𠧾𠧿𠨀𠨁𠨂𠨃𠨄𠨅𠨆𠨇𠨈𠨉𠨊𠨋𠨌𠨍𠨎𠨏𠨐𠨑𠨒𠨓𠨔𠨕𠨖𠨗𠨘𠨙𠨚𠨛𠨜𠨝𠨞𠨟𠨠𠨡𠨢𠨣𠨤𠨥𠨦𠨧𠨨𠨩𠨪𠨫𠨬𠨭𠨮𠨯𠨰𠨱𠨲𠨳𠨴𠨵𠨶𠨷𠨸𠨹𠨺𠨻𠨼𠨽𠨾𠨿𠩀𠩁𠩂𠩃𠩄𠩅𠩆𠩇𠩈𠩉𠩊𠩋𠩌𠩍𠩎𠩏𠩐𠩑𠩒𠩓𠩔𠩕𠩖𠩗𠩘𠩙𠩚𠩛𠩜𠩝𠩞𠩟𠩠𠩡𠩢𠩣𠩤𠩥𠩦𠩧𠩨𠩩𠩪𠩫𠩬𠩭𠩮𠩯𠩰𠩱𠩲𠩳𠩴𠩵𠩶𠩷𠩸𠩹𠩺𠩻𠩼𠩽𠩾𠩿𠪀𠪁𠪂𠪃𠪄𠪅𠪆𠪇𠪈𠪉𠪊𠪋𠪌𠪍𠪎𠪏𠪐𠪑𠪒𠪓𠪔𠪕𠪖𠪗𠪘𠪙𠪚𠪛𠪜𠪝𠪞𠪟𠪠𠪡𠪢𠪣𠪤𠪥𠪦𠪧𠪨𠪩𠪪𠪫𠪬𠪭𠪮𠪯𠪰𠪱𠪲𠪳𠪴𠪵𠪶𠪷𠪸𠪹𠪺𠪻𠪼𠪽𠪾𠪿𠫀𠫁𠫂𠫃𠫄𠫅𠫆𠫇𠫈𠫉𠫊𠫋𠫌𠫍𠫎𠫏𠫐𠫑𠫒𠫓𠫔𠫕𠫖𠫗𠫘𠫙𠫚𠫛𠫜𠫝𠫞𠫟𠫠𠫡𠫢𠫣𠫤𠫥𠫦𠫧𠫨𠫩𠫪𠫫𠫬𠫭𠫮𠫯𠫰𠫱𠫲𠫳𠫴𠫵𠫶𠫷𠫸𠫹𠫺𠫻𠫼𠫽𠫾𠫿𠬀𠬁𠬂𠬃𠬄𠬅𠬆𠬇𠬈𠬉𠬊𠬋𠬌𠬍𠬎𠬏𠬐𠬑𠬒𠬓𠬔𠬕𠬖𠬗𠬘𠬙𠬚𠬛𠬜𠬝𠬞𠬟𠬠𠬡𠬢𠬣𠬤𠬥𠬦𠬧𠬨𠬩𠬪𠬫𠬬𠬭𠬮𠬯𠬰𠬱𠬲𠬳𠬴𠬵𠬶𠬷𠬸𠬹𠬺𠬻𠬼𠬽𠬾𠬿𠭀𠭁𠭂𠭃𠭄𠭅𠭆𠭇𠭈𠭉𠭊𠭋𠭌𠭍𠭎𠭏𠭐𠭑𠭒𠭓𠭔𠭕𠭖𠭗𠭘𠭙𠭚𠭛𠭜𠭝𠭞𠭟𠭠𠭡𠭢𠭣𠭤𠭥𠭦𠭧𠭨𠭩𠭪𠭫𠭬𠭭𠭮𠭯𠭰𠭱𠭲𠭳𠭴𠭵𠭶𠭷𠭸𠭹𠭺𠭻𠭼𠭽𠭾𠭿𠮀𠮁𠮂𠮃𠮄𠮅𠮆𠮇𠮈𠮉𠮊𠮋𠮌𠮍𠮎𠮏𠮐𠮑𠮒𠮓𠮔𠮕𠮖𠮗𠮘𠮙𠮚𠮛𠮜𠮝𠮞𠮟𠮠𠮡𠮢𠮣𠮤𠮥𠮦𠮧𠮨𠮩𠮪𠮫𠮬𠮭𠮮𠮯𠮰𠮱𠮲𠮳𠮴𠮵𠮶𠮷𠮸𠮹𠮺𠮻𠮼𠮽𠮾𠮿𠯀𠯁𠯂𠯃𠯄𠯅𠯆𠯇𠯈𠯉𠯊𠯋𠯌𠯍𠯎𠯏𠯐𠯑𠯒𠯓𠯔𠯕𠯖𠯗𠯘𠯙𠯚𠯛𠯜𠯝𠯞𠯟𠯠𠯡𠯢𠯣𠯤𠯥𠯦𠯧𠯨𠯩𠯪𠯫𠯬𠯭𠯮𠯯𠯰𠯱𠯲𠯳𠯴𠯵𠯶𠯷𠯸𠯹𠯺𠯻𠯼𠯽𠯾𠯿𠰀𠰁𠰂𠰃𠰄𠰅𠰆𠰇𠰈𠰉𠰊𠰋𠰌𠰍𠰎𠰏𠰐𠰑𠰒𠰓𠰔𠰕𠰖𠰗𠰘𠰙𠰚𠰛𠰜𠰝𠰞𠰟𠰠𠰡𠰢𠰣𠰤𠰥𠰦𠰧𠰨𠰩𠰪𠰫𠰬𠰭𠰮𠰯𠰰𠰱𠰲𠰳𠰴𠰵𠰶𠰷𠰸𠰹𠰺𠰻𠰼𠰽𠰾𠰿𠱀𠱁𠱂𠱃𠱄𠱅𠱆𠱇𠱈𠱉𠱊𠱋𠱌𠱍𠱎𠱏𠱐𠱑𠱒𠱓𠱔𠱕𠱖𠱗𠱘𠱙𠱚𠱛𠱜𠱝𠱞𠱟𠱠𠱡𠱢𠱣𠱤𠱥𠱦𠱧𠱨𠱩𠱪𠱫𠱬𠱭𠱮𠱯𠱰𠱱𠱲𠱳𠱴𠱵𠱶𠱷𠱸𠱹𠱺𠱻𠱼𠱽𠱾𠱿𠲀𠲁𠲂𠲃𠲄𠲅𠲆𠲇𠲈𠲉𠲊𠲋𠲌𠲍𠲎𠲏𠲐𠲑𠲒𠲓𠲔𠲕𠲖𠲗𠲘𠲙𠲚𠲛𠲜𠲝𠲞𠲟𠲠𠲡𠲢𠲣𠲤𠲥𠲦𠲧𠲨𠲩𠲪𠲫𠲬𠲭𠲮𠲯𠲰𠲱𠲲𠲳𠲴𠲵𠲶𠲷𠲸𠲹𠲺𠲻𠲼𠲽𠲾𠲿𠳀𠳁𠳂𠳃𠳄𠳅𠳆𠳇𠳈𠳉𠳊𠳋𠳌𠳍𠳎𠳏𠳐𠳑𠳒𠳓𠳔𠳕𠳖

While *Kan-on* (漢音, Han pronunciations) are also referred to as *Seion* (正音, standard pronunciations), their tones often align with those in the *Guangyun*. The Kanchi-in manuscript's entry for '觀' also matches the *Guangyun* tone.

Therefore, for annotation purposes, it would likely be sufficient to indicate only the phonetic information, such as: “‘觀’ is given in the *Guangyun* as “渠邊切” (*qú lín qiè*; Departing tone, *Zhen* rhyme (震韻), under *xiaoyun* ‘僅’).”

It should be noted that the character ‘音’ (sound/pronunciation) in the original manuscript often appears as the abbreviated character ‘𠂔’, but our policy is to normalize it to the standard form ‘音’ in transcriptions.

5.1.2.3.3 Japanese-adapted Pronunciation (*Wa-on*)

Another **Phonetic Gloss** provided is “和後ン (L) “, indicating that the *Wa-on* (和音, Japanese-adapted pronunciation) is “後ン” with a low, level tone pattern (L). The ‘和’ (for *Wa-on*) in the original manuscript often appears as the abbreviated character ‘禾’, but this too is normalized to the standard form ‘和’ in transcriptions.

The ‘後’ in “後ン” is understood to represent the voiced sound *go*. The **Tone Mark (*shōten*)** is applied only to ‘ン’ as a level tone (平声, *pingshēng*). In the *Guangyun*, ‘觀’ is a Departing tone character, and the Departing tone is considered to be a rising or high falling tone. Although the tone of ‘後’ in the Kanchi-in manuscript's *Wa-on* reading is unclear, ‘ン’ is marked with a level tone, making it difficult to interpret as a rising or high falling tone. It was likely a low, level tone. From these points, it is evident that the tonal pronunciations differ between the *Seion* and the *Wa-on*.

The textual sources for *Wa-on* readings are believed to reflect the pronunciations used when reciting sutras such as the Lotus Sutra (法華經, *Hokekyō*) and the Great Perfection of Wisdom Sutra (大般若經, *Dai-Hannya-kyō*). Checking with the SAT Taishō Tripiṭaka Text Database (大正新脩大藏經データベース), ‘觀’ appears multiple times in both the Lotus Sutra and the Great Perfection of Wisdom Sutra.

Examining the Zushoryōbon manuscript of the original compilation of the *Ruiju Myōgishō*, we find citations from Shingō's *Dai-Hannya-kyō Onkun* (大般若經音訓, Phonetic Readings and Meanings of the Great Perfection of Wisdom Sutra) and Fujiwara no Kintō's *Dai-Hannya-kyō Jishō* (大般若經字抄, Character Excerpts from the Great Perfection of Wisdom Sutra). While the *Dai-Hannya-kyō Onkun* is a lost work (逸書, *issho*), the Ishiyama-dera

manuscript of the *Dai-Hannya-kyō Jishō* is extant and can be collated. Upon investigation, ‘覲’ does not appear in the *Dai-Hannya-kyō Jishō*.

For annotation purposes, it is necessary to note any questions regarding the character forms of **Hanzi (Chinese characters)** or kana, and the placement of **Tone Marks (shōten)**. The distinction between red and black ink for these marks, as well as the condition of any manuscript damage (e.g., wormholes), should be recorded as needed. Furthermore, one might note the presence or absence of the character in the Lotus Sutra and the Great Perfection of Wisdom Sutra, record relevant content from the Ishiyama-dera manuscript of the *Dai-Hannya-kyō Jishō* or from extant fragments of the *Dai-Hannya-kyō Onkun*, and add critical analysis (考証, *kōshō*).

5.1.2.4 Examining Japanese Native Readings (*wakun*)

Two **Japanese Native Readings (wakun)** are provided for ‘覲’: “ミル” (*miru*; LH) and “マミユ” (*mamiyu*; HLH).

The character ‘覲’ is explained in the *Shuowen Jiezi* (說文解字), under the “見” (see) radical section, as: “諸侯秋朝曰覲，勞王事。从見堇聲” (When feudal lords have an audience with the sovereign in autumn, it is called *jìn* (覲); they are exerting themselves in the king’s affairs. The character is composed of the radical 見 and takes its sound from 堇). This corresponds to the *wakun* “ミル” (*miru*) in the sense of “to have an audience with,” or “to be granted an audience.”

A relevant passage can be found in the *Zhouli* (周禮; Rites of Zhou), in the “Spring Offices - Great Minister of Rites” (春官・大宗伯, *Chūnguān Dàzōngbó*) section: “春見曰朝、夏見曰宗、秋見曰覲、冬見曰遇、時見曰會、殷見曰同。” (An audience in spring is called *cháo*; in summer, *zōng*; in autumn, *jìn* (覲); in winter, *yù*; an audience at any time, *huì*; and an audience with various lords together, *tóng*.)

5.1.3 Creating Annotations

Ideally, annotations would be created to cover all the types of content discussed above. However, conducting critical investigations for approximately 32,600 **Entries** and about 86,800 **Original Gloss** elements—totaling around 119,400 items—would require an immense amount of time and effort.

The areas where research has been most extensively accumulated are, firstly, **Japanese Native Readings (wakun)**, and secondly, **Phonetic Glosses**. Research concerning **Notes on Character Form** and **Semantic Glosses in Chinese** is less abundant. Therefore, we will begin by incorporating the research findings of previous scholars concerning **Japanese Native Readings (wakun)**.

5.1.3.1 Annotating Japanese Native Readings (*wakun*)

There are many scholarly works that discuss **Japanese Native Readings (*wakun*)** to which **Tone Marks (*shōten*)** have been applied. Furthermore, not a few *wakun* have identifiable sources, such as those found in *Monzen* (文選) readings.

The following publications are essential references for determining the lexical forms of **Japanese Native Readings (*wakun*)**. As they are frequently used in creating annotations, they will be referred to by the abbreviations shown below:

- **Masamune's Index (正宗索引, *Masamune Sakuin*)**: Masamune Atsuo, ed. *Ruiju Myōgishō, Dainikan: Kanji Sakuin, Kana Sakuin* (類聚名義抄 第二卷 漢字索引假名索引, *Ruiju Myōgishō*, Vol. 2: Kanji Index, Kana Index). Tokyo: Kazama Shobō, 1955.
- **Mochizuki's Wakun Collection (望月和訓集成, *Mochizuki Wakun Shūsei*)**: Mochizuki Ikuko, ed. *Ruiju Myōgishō: Yonshu Shōten-tsuki Wakun Shūsei* (類聚名義抄 : 四種声点付和訓集成, *Ruiju Myōgishō: A Collection of Wakun with Four Types of Tone Marks*; Kasama Sakuin Sōkan 44). Tokyo: Kasama Shoin, 1974.
- **Kusakawa's Wakun Collection (草川和訓集成, *Kusakawa Wakun Shūsei*)**: Kusakawa Noboru, ed. *Gohon Taishō Ruiju Myōgishō Wakun Shūsei* (五本対照類聚名義抄和訓集成, A Collection of Wakun from Five Collated Manuscripts of the *Ruiju Myōgishō*). Tokyo: Kyūko Shoin, 2000.
- **Nakamura's Monzen (中村文選, *Nakamura Monzen*)**: Nakamura Munehiko. *Kujōke-bon Monzen Kokunshū* (九条家本文選古訓集, Old Japanese Readings of the *Monzen* from the Kujō Family Manuscript). Tokyo: Kazama Shobō, 1983.
- **Kunten Goi Shūsei (訓点語彙集成, *Kunten Goi Shūsei*)**: Tsukishima Hiroshi, ed. *Kunten Goi Shūsei* (訓点語彙集成, A Comprehensive Collection of *Kunten* Vocabulary). 8 vols. and 1 supplementary vol. Tokyo: Kyūko Shoin, 2007–2009.

Many other books and articles also contain relevant descriptions. For example, the following works will be consulted sequentially:

- **Iroha Ryakuchū (色葉略注)**: Satō Kiyoji. *Iroha Jiruishō Ryakuchū* (色葉字類抄略注, Annotated Abridgment of the *Iroha Jiruishō*). 3 vols. (Jō, Chū, Ge). Tokyo: Meiji Shoin, 1995.
- **Kunten-go Jiten (訓点語辞典)**: Yoshida Kanehiko, Tsukishima Hiroshi, Ishizuka Harumichi, and Tsukimoto Masayuki. *Kunten-go Jiten* (訓点語辞典, Dictionary of *Kunten* Japanese). Tokyo: Tōkyōdō Shuppan, 2001.

When there are many **Hanzi (Chinese characters)** sharing the same *kun* reading, only the primary ones have been listed.

Among large-scale Japanese and Kanwa (Chinese-Japanese) dictionaries, the following are representative. Only the latest editions are listed:

- *Nihon Kokugo Daijiten Dainihan* Henshū linkai and Shōgakukan Kokugo Jiten Henshūbu, eds. *Nihon Kokugo Daijiten* (日本国語大辞典, Comprehensive Japanese Dictionary). 2nd ed. Tokyo: Shōgakukan, 2000–2002.
 - Content made available via JapanKnowledge starting November 2006.
- Morohashi Tetsuji. *Dai Kan-Wa Jiten, Shūtei Daini-han* (大漢和辞典 修訂第二版, The Great Chinese-Japanese Dictionary, Revised 2nd Edition). Edited by Kamata Tadashi and Yoneyama Toratarō. 12 vols., plus Vocabulary Index and Supplement. Tokyo: Taishūkan Shoten, 1990–2000.
 - Included as additional content in JapanKnowledge starting April 2021.

As a lexicographical tool for classical Chinese, the following is useful:

- Zong Fukang (宗福邦), Chen Shiyao (陳世鏐), and Xiao Haibo (蕭海波), chief eds. *Guxun Huizuan* (故訓匯纂, Compilation of Ancient Glosses). Beijing: Shangwu Yinshuguan (商務印書館), 2003.

The copy I have in my possession is the two-volume edition published in 2007. It is a compilation of glosses found in 250 texts from the Pre-Qin period to the late Qing dynasty. Prior to this, Ruan Yuan's (阮元) *Jingji Zuan Gu* (經籍纂詁) was the standard rhyme-arranged lexicographical tool for ancient glosses. The *Guxun Huizuan* is arranged by radical and stroke count, and it includes a significantly larger number of source texts.

5.1.3.2 Annotating Phonetic Glosses

For **Phonetic Glosses**, the primary necessity is to collate them with the *Guangyun* (廣韻). Using this as a foundation, analyses will be conducted on **Tone Marks** (*shōten*), **Kana glosses** (仮名音注, *kana-onchū*), **Wa-on notes** (和音注, *wa-on chū*), and **Go-on notes** (呉音注, *go-on chū*). Since many **Headwords** are not found in the *Guangyun*, it is also necessary to refer to descriptions in texts such as the *Tenrei Banshō Meigi* (篆隸万象名義), extant fragments of the original *Yupian* (原本玉篇殘卷, *genpon Gyokuhen zankan*), the Song edition of the *Yupian* (宋本玉篇, *Sōhon Gyokuhen*), the *Longkan Shoujian* (龍龕手鑑, *Ryūgan Shukan*), and the *Yiqiejing Yinyi* (一切經音義).

Various facsimile editions and indexes of these works are available. Additionally, many dictionaries and rhyme books can now be searched online.

The following are a list of resources primarily from my personal collection that I have utilized to date. Online versions are also noted for reference.

Rhyme Dictionaries: *Qieyun*, *Guangyun*, and *Jiyun*

- Chen Pengnian (陳彭年), ed. *Jiaozheng Songben Guangyun, Fu Suoyin* (校正宋本廣韻附索引, Collated Song Edition of the *Guangyun*, with Index). Taipei: Yiwen Yinshuguan (藝文印書館), 1967.
 - A photoreproduction of the Zecuntang (澤存堂) edition, with a character index arranged by radical and stroke count.
- Liu Fu (劉復), ed. *Shiyun Huibian* (十韻彙編, Compilation of Ten Rhyme Dictionaries). Taipei: Xuesheng Shuju (學生書局), 1975.
 - Presents fragments of the *Qieyun* in the upper register, corresponding to the *Guangyun* in the lower register.
- Ding Du (丁度) et al., eds. *Jiyun: Fu Suoyin* (集韻：附索引, The *Jiyun*: With Index). Shanghai: Shanghai Guji Chubanshe (上海古籍出版社), 1985.
 - Contains a photoreproduction of the Shugutang (述古堂) manuscript copy of a Song edition, held in the Shanghai Library. Includes a Four-Corner Index.
- Suzuki Shingo (鈴木慎吾). [“Hen’in Dētabēsu \(PYDB\)” \(篇韻データベース, Rhyme Database PYDB\)](#).
 - The *Qieyun*, *Guangyun*, and Middle Chinese phonology section includes “Web 韻圖～廣韻檢索～” (Web Rhyme Charts - *Guangyun* Search), “『切韻』諸本輯覽” (Collected Editions of the *Qieyun*), and “『切韻』佚文檢索” (Search for Lost Texts of the *Qieyun*).
- Ueda Tadashi (上田正). *Setsuin Itsuun no Kenkyū* (切韻逸文の研究, A Study of Lost Texts of the *Qieyun*). Tokyo: Kyūko Shoin (汲古書院), 1984
- [Chinese Text Project \(CTP\)](#) (中國哲學書電子化計劃).
 - The [Dictionary](#) search function provides information from texts such as the *Shuowen Jiezi*, the Song edition of the *Guangyun*, and the *Kangxi Zidian*. Searching for “集韻” (*Jiyun*) in the Title Search (書名檢索) allows access to various full-text versions (however, note that some may be “未經校對” - uncollated/uncorrected).

The *Yupian* (玉篇)

- Gu Yewang (顧野王), comp. *Yuánběn Yùpiān Cánjuàn* (原本玉篇殘卷, Surviving Fragments of the Original *Yupian*). In *Gǔdài Zìshū Jíkān* (古代字書輯刊, Collection of Ancient Dictionaries). Beijing: Zhonghua Shuju (中華書局), 2004.
- Zang Kehe (臧克和). *Zhōnggǔ Hànzì Liúbiàn* (中古漢字流變, Evolution of Middle Chinese Characters). Shanghai: Huadong Shifan Daxue Chubanshe (華東師範大學出版社), 2008.

- Collates and annotates the *Shuowen Jiezi*, surviving fragments of the original *Yupian*, the Song edition of the *Yupian*, and the *Tenrei Banshō Meigi*.
- Lü Hao (呂浩). “*Yupian*” *Wenxian Kaoshu* (《玉篇》文獻考述, A Philological Study of *Yupian* Documents). Shanghai: Shanghai Renmin Chubanshe (上海人民出版社), 2018.
 - In addition to studies on the *Yupian*, the appendices include “Yuánběn Yùpiān Cánjuàn Jiàodiǎnběn” (原本《玉篇》殘卷校點本, A Collated and Punctuated Edition of the Surviving Fragments of the Original *Yupian*) and “Yùpiān Yìwén Jílù” (《玉篇》逸文輯錄, A Compilation of Lost Texts of the *Yupian*).
- Gu Yewang (顧野王), comp., and Yao Yongming (姚永銘), coll. and ed. “*Yuánběn Yùpiān Cánjuàn*” *Jiàozhèng* (《原本玉篇殘卷》校證, A Collated and Annotated Edition of the Surviving Fragments of the Original *Yupian*). Hangzhou: Zhejiang Guji Chubanshe (浙江古籍出版社), 2023.
 - Exhaustively collects surviving texts related to the original *Yupian*, performs comparative collation, and provides detailed annotations.
- Gu Yewang (顧野王), comp. *Daguang Yihui Yupian* (大廣益會玉篇, The Great Expanded and Assembled *Yupian*). In *Gǔdài Zìshū Jíkān* (古代字書輯刊, Collection of Ancient Dictionaries). Beijing: Zhonghua Shuju (中華書局), 1987.
 - A photoreproduction of the Zecuntang (澤存堂) edition, with a Four-Corner Index.
- Gu Yewang (顧野王), comp., and Lü Hao (呂浩), coll. and ed. *Daguang Yihui Yupian* (大廣益會玉篇, The Great Expanded and Assembled *Yupian*). In *Zhōngguó Gǔdài Yǔyánxué Jīběn Diǎnjí Cóngshū* (中國古代語言學基本典籍叢書, Basic Classical Works on Ancient Chinese Linguistics Series). 3 vols. (upper, middle, lower). Beijing: Zhonghua Shuju (中華書局), 2019.
 - Based on the Song dynasty edition held by the Imperial Household Agency Archives (宮內庁書陵部藏宋本, *Kunaichō Shoryōbu-zō Sōhon*), collated against the Song 11-line edition (宋十一行本, *Sòng shíyī háng běn*), the Qing Rentei edition (清棟亭本, *Qīng liàn tíng běn*; known as the Yangzhou Shiju (揚州詩局) edition, held by the Nanjing Library), among others.
- [Integrated Database of Hanzi Dictionaries in Early Japan \(HDIC\)](#). “*Songben Yupian* (Song Edition *Yupian*)” (SYP).
 - An input version based on the Song dynasty edition held by the Imperial Household Agency Archives. Searchable via Suzuki Shingo’s “Hen’in Dētabēsu” (PYDB) under [Sōhon Gyokuhen Kensaku](#) (宋本玉篇検索, [Song Edition Yupian Search](#)).

The *Tenrei Banshō Meigi* (篆隸万象名義)

The *Tenrei Banshō Meigi* is an abridged version of the original *Yupian* and can therefore be used as a substitute for it.

- Kōyasan Daigaku and Kōyasan Daigaku Mikkyō Bunka Kenkyūjo (高野山大学・高野山大学密教文化研究所), eds. *Tenrei Banshō Meigi* (篆隸萬象名義). Kōyasan: Mikkyō Bunka Kenkyūjo (密教文化研究所), 1966.
- Kūkai (空海) and Yamada Yoshio (山田孝雄). *Tenrei Banshō Meigi* (篆隸萬象名義). In *Sūbun Sōsho* (崇文叢書, Sūbun Series), Dai 1-shū no 27–43. Tokyo: Sūbun'in (崇文院), 1926.
- Kōzanji Tenseki Monjo Sōgō Chōsadan (高山寺典籍文書綜合調査団), ed. *Kōzanji Kojisho Shiryō Daiichi* (高山寺古辭書資料第一, Kōzan-ji Old Dictionary Materials, Vol. 1). In *Kōzanji Shiryō Sōsho* (高山寺資料叢書, Kōzan-ji Materials Series), vol. 6. Tokyo: Tōkyō Daigaku Shuppankai (東京大學出版會), 1977.
- Lǚ Hao (吕浩). *Zhuànlì Wànxàng Míngyì Jiàoshì* (篆隸萬象名義校釋, Collated and Annotated *Tenrei Banshō Meigi*). Shanghai: Xuelin Chubanshe (學林出版社), 2007.
- [Integrated Database of Hanzi Dictionaries in Early Japan \(HDIC\)](#). “*Tenrei Banshō Meigi* (Kōsan-ji manuscript)” (KTB).

The *Longkan Shoujian/Shoujing* (龍龕手鑑/鏡 - Dragon Niche Hand Mirror/Guide)

- Shi Xingjun (釋行均), ed. *Longkan Shoujing* (龍龕手鏡, Dragon Niche Hand Mirror). Beijing: Zhonghua Shuju (中華書局), 1985.
 - Contains photoreproductions of Volume 1, Volume 3, and Volume 4 of the Goryeo edition. The entirety of Volume 2 (missing from the Goryeo edition), along with the last page of Volume 1, and the table of contents and the first page of the “見” (jiàn/miru) radical section of Volume 3, are supplemented from a Song edition.
- Fujimoto Yukio (藤本幸夫) and Jeong Gwang (鄭光). *Ryūkan Shukyō (Shukan) Kenkyū* (龍龕手鏡 (鑑) 研究, Studies on the *Longkan Shoujing/Shoujian*). Kashiwa: Reitaku Daigaku Shuppankai (麗澤大学出版会) / Hiroike Gakuen Jigyōbu (廣池学園事業部), 2015.
 - Comprises three research papers and photoreproductions. The photoreproductions follow the same composition as the Zhonghua Shuju edition.
- Shi Xingjun (釋行均), comp., and Kyōjō Teikoku Daigaku Hōbun Gakubu (京城帝國大學法文學部), ed. *Ryūkan Shūkyō* (龍龕手鏡, Dragon Niche Hand Mirror). 3 vols. (Vol. 1, Vol. 2, and Commentary). Tokyo: Shichijō Kenzō (七条憲三), 1928–1929.

- The photoreproductions in the two aforementioned books are both based on this edition. Difficult to obtain.

The *Yiqiejing Yinyi* (一切經音義 - Pronunciation and Meaning in the Entire Buddhist Canon)

Many old manuscripts and early printed editions of Xuan Ying's (玄應) *Yiqiejing Yinyi* (一切經音義) are extant. Furthermore, some parts of Xuan Ying's *Yiqiejing Yinyi* are also included verbatim in Huilin's (慧琳) *Yiqiejing Yinyi*.

- Kōkyō Shoin (弘教書院), ed. *Dainihon Kōtei Daizōkyō Ongibu Iroku* (大日本校訂大藏經音義部爲六, The Great Japan Collated Tripitaka, Lexicographical Section, Vol. 6). Tokyo: Kōkyō Shoin (弘教書院), 1885.
 - Contains the Goryeo edition. A typeset edition.
- Yamada Yoshio (山田孝雄). *Issaikyō Ongi Sakuin* (一切經音義索引, Index to the *Yiqiejing Yinyi*). Tokyo: Seitō Shobō (西東書房), 1925.
 - An index to both Xuan Ying's and Huilin's *Yiqiejing Yinyi*. Includes Yamada Yoshio's "Issaikyō Ongi Kankō no Tenmatsu" (一切經音義刊行の顛末, An Account of the Publication of the *Yiqiejing Yinyi*).
- Xuan Ying (玄應) and Yamada Yoshio (山田孝雄). *Issaikyō Ongi* (一切經音義). Tokyo: Seitō Shobō (西東書房), 1932.
 - A photoreproduction of the Hōryū-ji Issaikyō manuscript copied in the Daiji era (1126-1131) (abbreviated as the Daiji-bon 大治本). Currently held by the Imperial Household Agency Archives. Contains 19 fascicles in 5 cases (vols. 1-2 and 9-25). Missing parts are supplemented from the Goryeo edition.
- Xuan Ying (玄應) and Zhou Fagao (周法高). *Xuán Yīng Yīqièjīng Yīnyì* (玄應一切經音義). In *Zhōngyāng Yánjiūyuàn Lìshǐ Yǔyán Yánjiūsuo Zhuānkān* (中央研究院歷史語言研究所專刊, Special Publications of the Institute of History and Philology, Academia Sinica) 47: *Xuán Yīng Yīqièjīng Yīnyì Fǎnqiè Kǎo, Fùcè* (玄應一切經音義反切考・附冊, A Study of the Fanqie Spellings in Xuan Ying's *Yiqiejing Yinyi*, with Supplement). Taipei: Zhongyang Yanjiuyuan Lishi Yuyan Yanjiusuo (中央研究院歷史語言研究所), 1962.
 - Contains the Kōkyō Shoin edition.
- Yi Seon-geun (이선근, 李瑱根), ed. *Ilchegyeong Eumui: Oe Sibib 部* (일체경음의: 외십이부, 一切經音義: 外十二部, The *Yiqiejing Yinyi*: With Twelve Other Works). In *Goryeo Daejanggyeong* (고려대장경, 高麗大藏經, The Goryeo Tripitaka), vol. 32. Seoul: Dongguk Daehakgyo Chulpanbu (동국대학교 출판부, Dongguk University Press), 1975.
 - Contains Xuan Ying's *Yiqiejing Yinyi*.

- Huilin (慧琳) and Yi Seon-geun (이선근, 李瑄根), ed. *Hyerin Gyeong Eumui* (혜림경음의, 慧琳經音義, Huilin's *Yiqiejing Yinyi*). In *Goryeo Daejanggyeong* (고려대장경, 高麗大藏經, The Goryeo Tripitaka), vols. 42-43. Seoul: Dongguk Daehakgyo Chulpanbu (동국대학교 출판부, Dongguk University Press), 1976.
 - Contains Huilin's *Yiqiejing Yinyi*.
- Xuan Ying (玄應) and Kobayashi Yoshinori (小林芳規). *Issaikyō Ongi* (一切經音義). In *Kojisho Ongi Shūsei* (古辞書音義集成, Collection of Old Dictionaries with Phonetic and Semantic Glosses), vols. 7-9. Tokyo: Kyūko Shoin (汲古書院), 1980.
 - In addition to the Daiji-bon, includes the Hiroshima University manuscript (vols. 2-5) and the Tenri Library manuscript (vol. 9) of the Ishiyama-dera Issaikyō-bon, as well as Volume 18 of the Tenri Library manuscript (a late Kamakura period copy). Furthermore, Volumes 3-8 are supplemented from the Goryeo edition.
- Numoto Katsuaki (沼本克明), Ikeda Shōju (池田証壽), and Hara Takushi (原卓志), eds. *Issaikyō Ongi Sakuin* (一切經音義索引, Index to the *Yiqiejing Yinyi*). In *Kojisho Ongi Shūsei* (古辞書音義集成, Collection of Old Dictionaries with Phonetic and Semantic Glosses), vol. 19. Tokyo: Kyūko Shoin (汲古書院), 1984.
 - An index of headword characters, phonetic glosses, and cited sources, based on the *Kojisho Ongi Shūsei* edition.
- Kokusai Bukkyōgaku Daigakuin Daigaku Gakujutsu Frontier Jikkō Iinkai (国際仏教学大学院大学学術フロンティア実行委員会), ed. *Gen'ō Sen Issaikyō Ongi Nijūgokan* (玄應撰一切經音義二十五卷, Xuan Ying's *Yiqiejing Yinyi* in Twenty-Five Fascicles). In *Nihon Koshakyō Zenpon Sōkan* (日本古寫經善本叢刊, Series of Rare Old Japanese Manuscript Sutras), 1st series. Tokyo: Kokusai Bukkyōgaku Daigakuin Daigaku Gakujutsu Frontier Jikkō Iinkai (国際仏教学大学院大学学術フロンティア実行委員会), 2006.
 - Contains photoreproductions totaling 53 fascicles: 21 fascicles from the Kongō-ji manuscript, 20 fascicles from the Nanatsu-dera manuscript, Volume 15 from the Historiographical Institute, University of Tokyo manuscript (from the Nanatsu-dera Issaikyō), Volumes 6 and 7 from the Faculty of Letters, Kyoto University manuscript (from the Ishiyama-dera Issaikyō), and 9 fascicles from the Saihō-ji manuscript.
- Xu Shiyi (徐時儀), coll. and ann. *Yiqiejing Yinyi Sānzhōng Jiàoběn Hékān* (一切經音義三種校本合刊, A Combined Edition of Three Collated Versions of the *Yiqiejing Yinyi*). Shanghai: Shanghai Guji Chubanshe (上海古籍出版社), 2008.
 - A collated and annotated edition of the Yinyi by Xuan Ying, Huilin, and Xilin (希麟). Revised edition published in 2012.

Recently, the following work, which comprehensively covers historical Chinese character pronunciation data, was published:

The *Gǔyīn Huìzuǎn* (古音匯纂 - Compilation of Ancient Pronunciations)

- Zong Fubang (宗福邦), Chen Shiyao (陳世鏐), and Yu Ting (于亭), chief eds. *Gǔyīn Huìzuǎn* (古音匯纂). Beijing: Shangwu Yinshuguan (商務印書館), 2019.
 - Comprehensively covers Old Chinese (上古, *Shànggǔ*), Middle Chinese (中古, *Zhōnggǔ*), and Modern Chinese (近代, *Jìndài*) character pronunciation data from the Pre-Qin period to the late Qing dynasty. Includes 127 primary cited works. A companion volume to the *Guxun Huizuan* (故訓匯纂).

5.2 Calculation of Headword Character Count

This page is detailed reference data supporting the policy set out in [Basic Principles and Analytical Focus for Annotation Creation](#). For definitions of the character-form terms used below (Miswritten Characters, Omitted Characters, Superfluous Characters, etc.), see [Handling Issues in Transcription, Notation, and Annotation](#).

This section will explain issues such as **Miswritten Characters** (誤字, *goji*), **Omitted Characters** (脱字, *datsuji*), **Superfluous Characters** (衍字, *enji*), interpolations (補入, *honyū*), **Embedded Items** (埋字, *umeji*; referring to entries incorporated within another entry), **Substitution Marks** (代用符号, *daiyō fugō*), and **Iteration Marks** (踊り字, *odoriji*). Following this discussion, it will proceed to calculate the *keishutsuji-sū* (掲出字数). The *keishutsuji-sū* refers to the total number of characters that constitute all **Headwords**.

Then, based on the results of this *keishutsuji-sū* calculation, the number of **Entries** (*keishutsu kōmoku-sū*, 掲出項目数) will also be calculated. The number of **Entries** will be aggregated according to the number of characters constituting their **Headwords** (e.g., **Entries** with single-character **Headwords**, **Entries** with two-character **Headwords**, and so on).

Finally, a list will be provided showing the *keishutsuji-sū* (total headword character count) and the number of **Entries** (*keishutsu kōmoku-sū*) for each of the 120 radical sections of the *Myōgishō*. In this listing, our calculated number of **Entries** will be compared with the entry count calculated by Sakai Kenji, and any discrepancies between our calculations and his will also be explained.

5.2.1 Miswritten Characters (*goji*)

Below are some examples of **Miswritten Characters** (誤字, *goji*) found in **Headwords**.

The examples are presented by extracting relevant portions from `krm_main.tsv` and adding the content of the `remarks` column from `krm_notes.tsv`. For ease of reference, the Kazama Edition location is also shown as `kazama_location`. For instance, `K02008840` indicates an appearance in Volume 2 (仏中, *Butsuchū*), Page 8, Line 8, Segment 4 (the explanation for the last digit, which represents character order within the segment, is omitted here).

The first example is relatively straightforward.

Example: * `kazama_location: K02008840` * `hanzi_entry: 姪` * `original_entry: 活` * `definition: 今` * `remarks: The Headword is a scribal error. It has been corrected to ‘姪’ based on the Kōzan-ji, Renshō-in, and Sainen-ji manuscripts, all of which have ‘姪’.`

This example is a **Headword** from the “女” (woman) radical section. Since other manuscripts (異本, *ihon*) have the character ‘姪’ (with the “女” woman radical), it is clear that there is a scribal error in the Kanchi-in manuscript.

The following is an example where it is difficult to determine whether the **Headword** is a **Miswritten Character**.

Example:

- `kazama_location: K01045610`
- `hanzi_entry: 迷`
- `original_entry: 〇`
- `definition: 俗悉字 私逸反`
- `remarks: Is the Headword ‘迷’ a glyph form that evolved from ‘𠂔半’, a variant character (itaiji) of ‘悉’?`

In this example, the **Headword** ‘迷’ has the **Note on Character Form** “俗悉字” (*zoku Shitsuji*; “popular form of 悉”) in its **Original Glosses**, indicating it is treated as a ‘popular’ form of ‘悉’. However, ‘迷’ and ‘悉’ are distinct characters, and to connect them, a scribal error must be assumed. It is presumed that this form arose from writing the ‘心’ (heart) component at the bottom of ‘悉’ in a way that resembles ‘𠂔’ (motion radical). This is an example where a **variant character (*itaiji*)** of ‘悉’ appears to have been conflated with, or graphically evolved towards, the character ‘迷’.

The hypothesized process of change from ‘悉’ to ‘迷’ can be illustrated as follows:

悉 → 悉 → 悉 → 迷 → 迷
迷

According to GlyphWiki, an example of 迷 (迷, U+28483) can be found in [Yínánzì Kǎoshì Yǔ Yánjiū (疑難字考釋與研究, Philological Studies and Research on Difficult and Problematic Characters)].

5.2.2 Omitted Characters (脱字, *datsuji*)

Omitted Characters (*datsuji*) in **Headwords**, which have been detailed elsewhere, are handled as follows: when a character is clearly omitted from a **Headword**, the presumed omitted character is indicated by enclosing it in full-width square brackets “ [] ”.

Example:

是／ [以]
不／奈／ [何]
将／為／ [便]
嘻／ [囉]
奢／ [侈]
奚／ [如]

An example of the corresponding annotation is shown below:

Example: *kazama_location: K02006630 *hanzi_entry: 奚／ [如] *original_entry: ○／○ *definition: イカム (_L *remarks: The character ‘如’ is omitted. The Renjō-in manuscript has ‘奚如’. The Kōzan-ji manuscript does not use the substitution mark ‘一’ but explicitly writes ‘如’, and this entry is located near the latter half of the “女” (woman) radical section. This Kōzan-ji manuscript usage is considered to be an earlier example (Okada’s research, p. 192).

5.2.3 Superfluous Characters (*enji*)

Instances of **Superfluous Characters** (*enji*) in **Headwords** are rarely found.

Example: *kazama_location: K04024810, hanzi_entry: 𠂔赤井, definition: サカユ シツカナリ *kazama_location: K04024820, hanzi_entry: 人, definition: (無)
(Unannotated), remarks: Could this ‘人’ be a superfluous character? Alternatively, the **Headword** might be a variant of ‘奕’, and this ‘人’ a miscopied iteration mark for the compound ‘奕奕’. The compound ‘奕奕’ has examples in the *Shijing* (Book of Odes).

The reason for the presence of the character ‘人’ in the second entry is unclear, and it is suspected to be a superfluous character.

5.2.4 Embedded Characters (*umeji*) and the *Bunchūshiki* (Divided-Annotation Style)

Embedded Characters (*umeji*) refer to **Entry**-like segments that are incorporated within another main **Entry**.

Example: *kazama_location: K02012610 *hanzi_entry: 娜 *definition (representing **Original Glosses**): 乃可 (H) 反 マ、ハ、 タヲヤカナリ 婀娜ー ヨキカホ ナマメク *remarks (**Compiler's Remark**): Could the segment “婀娜ー ヨキカホ ナマメク” be an embedded item/entry?

These embedded segments can either be considered equivalent to a separate **Entry** or interpreted as an explanation of a compound word provided within the **Original Glosses** of the main **Entry**.

The method of embedding glosses for a multi-character compound within the **Original Glosses** of a single (often the first) character of that compound is termed the “**Divided-Annotation Style**” (分註式, *Bunchūshiki*). In contrast, the method of presenting such information as an independent **Entry** following the main single-character **Entry** is called the “**Independent-Entry Style**” (独立式, *Dokuritsushiki*) (Okada Yoshio, *Ruiju Myōgishō no Kenkyū* [A Study of the *Ruiju Myōgishō*], p. 313 ff.).

While these annotation styles are important indicators for studying the relationships between different manuscripts and the sequential ordering of **Entries**, they will not be discussed further in this section.

5.2.5 Substitution Marks (代用符号, *daiyō fugō*) using ‘ | ’ (transcribed as ‘一’)

When the same **Headword** as in the preceding **Entry** is used, the vertical line ‘ | ’ (U+4E28) is sometimes employed in the original manuscript to substitute for it. In this database, for better readability in horizontal text, this ‘ | ’ is represented by ‘一’ (CHOONPU - long vowel mark, U+30FC), followed by the actual **Headword** it represents, enclosed in parentheses.

While the **Substitution Mark** ‘一’ (representing the original ‘ | ’) almost always refers to the **Headword** of the immediately preceding **Entry**, users should be aware that in very rare cases, it may refer to the **Headword** of an **Entry** that is not directly adjacent, skipping over one or more intervening **Entries**.

The following example illustrates a case where ‘一’ refers to a **Headword** that is considerably distant.

Example: *kazama_location: K01038411, hanzi_entry: 以／後, definition: ノチ*
kazama_location: K01038420, hanzi_entry: 後, definition: 字公 (L) 反 數也*
kazama_location: K01038430, hanzi_entry: 徇, definition: 音旬之去声 ト、ム メク
ル アマネシ* kazama_location: K01038510, hanzi_entry: 徇, definition: 同 トナフ
*アハネシ (L_) シタカフ (HV_) イトナム kazama_location: K01038530,
hanzi_entry: 徇, definition: 止「已」約反 シタフ* kazama_location: K01038541,
hanzi_entry: 已／一, definition: 同* kazama_location: K01038611, hanzi_entry: 向
／一, definition: ユクサキ (HH) ユクスエ, remarks: Erroneous Headword; should be
‘向後’. Okada’s research (pp. 193-194) notes that the use of ‘一’ is appropriate for the
Kōzan-ji manuscript.

Regarding the last two **Headwords** in the example (‘已／一’ and ‘向／一’), if one were to straightforwardly interpret the substitution mark ‘一’ as referring to the immediately preceding **Headword** (‘徇’ from K01038530), they would become ‘已／一 (substituting 徇)’ and ‘向／一 (substituting 徇)’. However, this interpretation does not make sense in context. As Okada Yoshio has pointed out, the **Headword** ‘向／一’ in this section should actually be ‘向後’. Consequently, the preceding **Headword** ‘已／一’ should then be interpreted as ‘已／後’.

In other words, it is hypothesized that this section originally had the **Entries** with **Headwords** ‘以／後’, ‘已／後’, and ‘向／後’ listed in sequence. Subsequently, the **Entries** listed above from the second one (K01038420, **Headword** ‘後’) through the fifth one (K01038530, **Headword** ‘徇’) are presumed to have been inserted into this original sequence.

5.2.6 Iteration Marks (踊り字, *odoriji*) using ‘ㄣ’

Iteration Marks (踊り字, *odoriji*) are also known as repetition marks (繰り返し符号, *kurikaeshi fugō*) or similar terms. Although the iteration mark ‘々’ (U+3005) is commonly used for **Hanzi** (Chinese characters) today, this database employs ‘ㄣ’ (U+303B). In the Kanchi-in manuscript, the ‘ㄣ’ mark is typically used for the second and subsequent characters in the **Headword** of an **Entry** for a compound word (熟語項目, *jukugo kōmoku*), as shown in the examples below.

Examples: *kazama_location: K01059441, hanzi_entry: 一 (迢) / ㄣ (迢),
definition: トホノカナリ *kazama_location: K02021731, hanzi_entry: 曾／一 (祖)

／𪛗 (母), definition: オホオハ (LHLHV) * kazama_location: K06036711,
 hanzi_entry: 郁／𪛗 (郁), definition: マタラカナリ (LLVHL_)

5.2.7 Characters in Original Glosses Written in Large Size

There are instances where characters within the **Original Glosses** are written in a large size, similar to **Headwords**, which can lead to confusion.

Example 1: * kazama_location: K02051210 * hanzi_entry: 咄 * definition: 音主 呼鷄
 * remarks (**Compiler's Remark**): In both the Kōzan-ji and Renjō-in manuscripts, the part corresponding to ‘呼鷄’ is rendered as ‘一 𪛗 呼鷄’ (where ‘一 𪛗’ likely indicates iteration or continuation from a preceding entry, followed by ‘呼鷄’). The Kanchi-in manuscript, however, writes ‘呼鷄’ in a large size.

This is an example from the “口” (mouth) radical section. While the Kanchi-in manuscript writes ‘呼鷄’ in a large size, both the Kōzan-ji and Renjō-in manuscripts have ‘一 𪛗 呼鷄’, suggesting that ‘呼鷄’ in the Kanchi-in manuscript should be considered as characters within the **Original Glosses** (rather than a separate **Headword**).

Example 2: * kazama_location: K06100620 * hanzi_entry: 喜 * definition: 音喜 (H-L)
 又嬉 コノム (LLH) 喜「注也」 ネカフ ツクス ヨロコフ (LLH_) ヒロシ
 (LL_) * remarks (**Compiler's Remark**): Within the **Original Glosses**, the character ‘喜’ is written in a large size; ‘注也’ (“this is a gloss”) is written to its left in red ink.

This example is from the “心” (heart) radical section. Here, the character ‘喜’ is written in a large size, making it appear like a **Headword**. However, the annotation ‘注也’ (*chū nari*; “this is a gloss”) to its left explicitly indicates that ‘喜’ is a character within the **Original Glosses** and not a **Headword**.

5.2.8 Number of Entries

5.2.8.1 Number of Entries and Total Headword Character Count

The number of **Entries** in the Kanchi-in manuscript of the *Ruiju Myōgishō* was published in: Ikeda Shōju, Liu Guanwei, Jung Munho, Zhang Xinfang, and Li Yuan, “Full-text Database of *Ruiju Myōgishō*, Kanchi-in MS : A Look at Development Methods and Calculating the Number of Headwords.” (*Kuntengo to Kuten Shiryō* 144, 2020). This paper classifies **Entries** by the number of characters in their **Headwords** and provides a detailed breakdown of these counts.

For example, a table row such as:

No.	Radical ⁵	1- char	2- char	3- char	4- char	5- char	6+ char	No. of Entries	No. of Chars
001	人 (Man)	616	203	26	5	2	3	855	1,149

indicates that in the “人” (man) radical section (人部, *jinbu*), there are 616 **Entries** whose **Headwords** are in **Single Character Form** (1 character). **Headwords** with two or more characters are in **Multi-Character Form**; in this section, there are 203 **Entries** with two-character **Headwords**, 26 with three-character, 5 with four-character, 2 with five-character, and 3 with six-or-more-character **Headwords**. The total number of **Entries** for this radical section is 855. The breakdown for the “6+ char” (6 字以上) category is: 2 **Entries** with six-character **Headwords** and 1 **Entry** with a seven-character **Headword**. Therefore, the total number of characters (*jisū*, 字数; i.e., the sum of characters in all **Headwords** for this section) is calculated as 1,149 using the following formula:

$$616 \text{ (representing } 616 \times 1) + (203 \times 2) + (26 \times 3) + (5 \times 4) + (2 \times 5) + (2 \times 6) + (1 \times 7) = 1,149$$

5.2.8.2 Verification of Entry Counts

The verification of **Entry** counts was primarily focused on radical sections where discrepancies were found with the figures presented in Sakai Kenji’s “Ruiju Myōgishō no Jijun to Bushu Hairetsu” (Character Order and Radical Arrangement in the *Ruiju Myōgishō*), published in *Honpō Jishoshi Ronsō* (Collected Papers on the History of Dictionaries in Japan), edited by Yamada Tadao (Tokyo: Sanseidō, 1967), pp. 191–258.

As a result, discrepancies were identified in the following 25 radical sections. The “Difference” column indicates cases where the count in Ikeda et al. (2020) is less than that in Sakai (1967) with a negative number (e.g., -1), and where it is greater with a positive number (e.g., +1). Counts determined to be correct as a result of this verification are shown in **bold**. Sections shown with non-bolded figures signify that, even if the counts from the two sources differ, a conclusion was pending or not reached in the current verification.

No.	Radical	Sakai (1967)	Ikeda et al. (2020)	Diff.
001	人 (Man)	856	855	-1
003	走 (Walk)	463	462	-1

⁵ In this table and those that follow, the term “部” (Radical) is used. This is a revision from “篇” (*hen*), which the author (Ikeda) had previously employed in papers and other publications.

No.	Radical	Sakai (1967)	Ikeda et al. (2020)	Diff.
014	口 (Mouth)	1,034	1,035	+1
018	日 (Sun)	557	556	-1
020	肉 (Flesh)	718	717	-1
023	角 (Horn)	127	126	-1
027	髟 (Hair)	166	165	-1
029	木 (Tree)	1,334	1,333	-1
039	火 (Fire)	512	513	+1
041	水 (Water)	1,322	1,321	-1
044	足 (Foot)	494	493	-1
051	石 (Stone)	375	376	+1
052	玉 (Jade)	384	383	-1
057	心 (Heart)	909	908	-1
066	勹 (Wrap)	34	33	-1
068	雨 (Rain)	226	228	+2
075	疒 (Sickness)	400	399	-1
080	寸 (Inch)	41	39	-2
087	食 (Eat)	214	213	-1
095	弓 (Bow)	102	101	-1
111	鳥 (Bird)	532	533	+1
113	魚 (Fish)	378	379	+1
114	虫 (Insect)	665	664	-1

No.	Radical	Sakai (1967)	Ikeda et al. (2020)	Diff.
117	鬼 (Ghost)	74	75	+1
120	雜 (Misc.)	1,500	1,501	+1

For the following radical sections, the counts in Sakai (1967) and Ikeda et al. (2020) were initially the same, but verification revealed a need for correction:

No.	Radical	Sakai (1967) & Ikeda et al. (2020) - Initial	Ikeda et al. (2020) - Revised	Diff. (from initial)
028	手 (Hand)	1,148	1,149	+1
086	毛 (Fur)	104	103	-1

Many of these discrepancies relate to differences in how **Entries** are identified and counted. Therefore, the following sections will specifically explain the discrepancies with the **Entry** counts presented in Sakai (1967). Finally, a list of **Entry** counts for each radical section, based on the revised figures, will be provided.

See [Entry and Headword Counts by Radical Section](#) for the detailed radical-by-radical breakdown.

5.3 Entry and Headword Counts by Radical Section

This page tabulates, for each of the *Myōgishō*'s 120 radical sections, the headword and entry counts derived using the method set out in [Calculation of Headword Character Count](#); see that page for the calculation method itself.

5.3.1 *Butsujō* (仏上 – First “Buddha” Fascicle)

In the *Butsujō* (仏上) section, discrepancies in **Entry** counts between Sakai (1967) and Ikeda et al. (2020) are found for the following two radical sections. The figures presented in the table below are from Ikeda et al. (2020):

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
001	人 (Man)	616	203	26	5	2	3	855	1,149
003	走 (Walk)	368	81	10	2	0	1	462	575

For the “人” (Man) radical section (人部, *jinbu*), the following instance, which should have been counted as two separate **Entries**, was mistakenly counted as a single **Entry**:

- kazama_location: K01008341, hanzi_entry: 於／一 (何) , definition: 同
- kazama_location: K01008343, hanzi_entry: 奈／一 (何) , definition: 同

This can be confirmed on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

In addition to this, there are the following four **Entries** where **Omitted Characters** in the **Headword** were supplied:

- kazama_location: K01005131, hanzi_entry: 是／ [以]
- kazama_location: K01008421, hanzi_entry: 不／奈／ [何]
- kazama_location: K01031111, hanzi_entry: 将／為／ [便]
- kazama_location: K01035310, hanzi_entry: 奢／ [侈]

The figures for the “人” (Man) radical section in Ikeda et al. (2020) need to be corrected for the number of **Entries** as follows. The corrected figures are shown in **bold**:

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
001	人 (Man)	614	205	28	4	2	3	856	1,153

For the “辵” (Walk) radical section (辵部, *Chaku-bu*), the following two **Entries** appear consecutively. Although they might seem like a single **Entry**, ‘迂’ and ‘還’ are distinct characters.

- kazama_location: K01050412, hanzi_entry: 迂
- kazama_location: K01050420, hanzi_entry: 還, definition: 音環(L) カヘル-ス
メクル マクラス シリソク マタ ヤム 又音旋 和外ン

This is a section where ‘迂’, ‘迢’, and ‘迂’ appear in sequence, and it is considered to be an arrangement where **Headwords** with similar glyph forms are listed consecutively. The **Entry** for ‘迂’ is treated as an unannotated **Entry**.

This can be confirmed on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

The discrepancy in **Entry** counts between Sakai (1967) and Ikeda et al. (2020) is presumed to be due to differences in the method of counting this particular instance.

5.3.2 *Butsuchū* (仏中 – Middle “Buddha” Fascicle)

In the *Butsuchū* section, discrepancies in **Entry** counts between Sakai (1967) and Ikeda et al. (2020) are found for the following three radical sections. The figures presented in the table below are from Ikeda et al. (2020):

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
014	口 (Mouth)	858	146	17	9	4	1	1,035	1,274
018	日 (Sun)	450	96	7	2	1	0	556	676
020	肉 (Flesh)	580	119	12	2	1	3	717	888

For the “口” (**Mouth**) radical section (口部, *kōbu*), there are three instances where the identification of **Entries** is problematic.

First, the following **Entries** for ‘吉’ and ‘喆’ are listed consecutively and might appear to be a single **Entry**:

- kazama_location: K02047711, hanzi_entry: 吉
- kazama_location: K02047712, hanzi_entry: 喆, definition: 知列反 サトル (HH_)
アキラカナリ シル サカシ シム

However, ‘吉’ (*Guangyun*: “居質切” *jūzhì qiè*, Entering tone, *Zhi* (質) rhyme, character 吉) and ‘喆’ (*Guangyun*: “陟列切” *zhìliè qiè*, Entering tone, *Xue* (薛) rhyme, character 哲) are distinct characters. The **Entry** for ‘吉’ is an unannotated one.

Please refer to the left side of the [corresponding page](#) in the National Diet Library Digital Collections.

Next, the **Headwords** ‘𠂔口𠂔木鼻’ and ‘嗜’ are listed consecutively (following an **Entry** for ‘嚙’) and might also appear to be a single **Entry** or part of the ‘嚙’ **Entry**:

- kazama_location: K02056421, hanzi_entry: 嚙, definition: 魯登反
- kazama_location: K02056422, hanzi_entry: 𠂔口𠂔木鼻
- kazama_location: K02056430, hanzi_entry: 嗜, definition: 俗善字

However, ‘𠂔口𠂔木鼻’ is graphically similar to ‘嚙’, and it is presumed to have been listed for that reason. The **Entry** for ‘𠂔口𠂔木鼻’ is likely an unannotated one.

Please refer to the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

The following is an example that could be interpreted as either one **Entry** or two, depending on the criteria for identification:

- kazama_location: K02030211, hanzi_entry: 𪛗／𪛘／𪛙, definition: 𪛗𪛘𪛙「クチサキラ（HHHVHL）」 「或本ニハ已上五字カキツ、ケタリ」 (In another manuscript, the preceding five characters are written consecutively)
- kazama_location: K02030221, hanzi_entry: 𪛚／𪛛, definition: 五正 呼厚反
イヒキ ヨハフ ホユ（LH） ナク（HL） 和ク（L）

The **Entry** for ‘𪛗／𪛘／𪛙’ has the note “或本ニハ已上五字カキツ、ケタリ” (In another manuscript, the preceding five characters are written consecutively). At first glance, this makes it seem separate from the following **Entry** for ‘𪛚／𪛛’. However, it could also be considered as a single, continuous **Entry**.

In Ikeda et al. (2020), these were treated as two separate **Entries**, prioritizing the format of their presentation in the manuscript.

Please refer to the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

5.3.3 *Butsuge-hon* (仏下本 – Lower “Buddha” Fascicle, First Part)

In the *Butsuge-hon* section, discrepancies in **Entry** counts between Sakai (1967) and Ikeda et al. (2020) are found for the following four radical sections. The figures presented in the table below are from Ikeda et al. (2020):

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
023	角 (Horn)	104	20	2	0	0	0	126	150
027	髟 (Hair)	127	28	5	2	3	0	165	221
028	手 (Hand)	886	219	37	3	2	1	1,148	1,465
029	木 (Tree)	1,044	243	40	5	0	1	1,333	1,676

For the “角” (**Horn**) radical section (角部, *kakubu*), the identification of **Entries** is problematic in the following instance:

- `kazama_location: K03012511, hanzi_entry: 𪛗或或角／𪛗, definition: (Unannotated)`
- `kazama_location: K03012520, hanzi_entry: 𪛗, definition: 音必 筆俗 羌人吹角`
- `kazama_location: K03012530, hanzi_entry: 𪛗, definition: 俗 クスヌク`

As some characters may not display correctly depending on the viewing environment, GlyphWiki images are used in the following explanation.

The **Headword** of the first **Entry** (K03012511 in the previous example, with `hanzi_entry:`

𪛗或或角／𪛗) is composed of the glyphs 𪛗 and 𪛗. The **Headword** of the

second **Entry** (K03012520, with `hanzi_entry: 𪛗`) is the glyph 𪛗. These three glyphs appear consecutively in the manuscript. A slight space is observed between the first glyph and the second glyph (both part of K03012511's **Headword**). A clear space, equivalent to one character width, is found between the second glyph (the end of K03012511's **Headword**) and the third glyph (the **Headword** of K03012520). If we represent the slight space with ‘_’ and the one-character space with ‘__’, the sequence appears as:

𪛗 _ 𪛗 __ 𪛗

The calculated number of **Entries** can vary depending on whether these three visually consecutive **Headword** glyphs are counted as one, two, or three separate **Entries**. In Ikeda et al. (2020), this sequence was counted as two **Entries**. This determination was based on the clear space between the second glyph (the last character of the first **Entry**'s **Headword**) and the third glyph (the **Headword** of the second **Entry**), and the fact that the first **Entry** (K03012511, ‘𪛗或或角／𪛗’) is unannotated.

Please refer to the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

Incidentally, this section in the Kanchi-in manuscript of the *Myōgishō* bears a strong resemblance to **Entries** found in Volume 4 of the *Longkan Shoujian/Shoujing* (龍龕手鏡), under the “角” (horn) radical.

- `location: Lb1690102, hanzi_entry: 𪛗或旦角／𪛗或或角, definition: 二俗。 (Two popular forms.)`
- `location: Lb1690104, hanzi_entry: 𪛗咸咸角／𪛗, definition: 二古。 (Two old forms.)`

- **location:** Lb1690106, **hanzi_entry:** 簨, **definition:** 今。音必。羌人吹角以驚与也。今作簨一簨樂器也。下又音佛。一理也。五。(Current form. Pronunciation *bì*. Horn blown by the Qiang people to startle game. Now written as 簨一簨 (*bìlì*), a musical instrument. The second character also has the pronunciation *fó* (佛). The ‘一’ indicates a principle/type. Five (notes/entries).)

The **Headword** for entry Lb1690104 in the *Longkan Shoujian/Shoujing* is

簨 簨

For the “**影**” (**Hair**) **radical section** (影部, *Hyōbu*), the identification of **Entries** is problematic in the following instance:

- **kazama_location:** K03036311
- **hanzi_entry:** 𠂔𠂔及／𠂔／𠂔𠂔用／𠂔𠂔少
- **definition (representing Original Glosses):** 未詳 (Unknown) 「𠂔𠂔𠂔𠂔右王𠂔𠂔𠂔𠂔𠂔圭〈私入〉」
- **remarks (Compiler's Remark):** Ikeda's note: The string “𠂔𠂔𠂔𠂔右王𠂔𠂔𠂔𠂔𠂔𠂔圭〈私入〉” is written in red ink. It is considered an **Embedded Item** (埋字, *umoji*). It is not counted as a separate **Entry** in this context.

The total number of **Entries** changes depending on whether the string “𠂔𠂔𠂔𠂔右王𠂔𠂔𠂔𠂔𠂔𠂔圭〈私入〉” (found within the **Original Glosses** of the above **Entry**) is counted as a separate **Entry** itself. In Ikeda et al. (2020), this string was not included in the **Entry** count for the “**影**” (Hair) radical section.

Please refer to the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

For the “**手**” (**Hand**) **radical section** (手部, *Shu-bu*), the identification of **Entries** is problematic in the following instance:

- **kazama_location:** K03061721, **hanzi_entry:** 𠂔𠂔𠂔水, **definition:** スクフ
- **kazama_location:** K03061722, **hanzi_entry:** 捏, **definition:** 二奴結反 下又音張舉也 剌也 又勅貞反

Because the **Original Glosses** for K03061722 ‘捏’ begin with the character ‘二’ (two), the **Entries** for ‘𠂔𠂔𠂔水’ and ‘捏’ were initially treated as a single unit in the database.

However, it was later decided to separate them. Nonetheless, questionable points remain regarding the content of the text. This instance can be seen on page 74 of the facsimile edition of the *Hōbodai-in manuscript*.

For the Kanchi-in manuscript, please refer to the left side of the [corresponding page](#) in the National Diet Library Digital Collections.

The following are two **Entries** where **Omitted Characters** in the **Headword** were supplied:

- kazama_location: K03039530, hanzi_entry: 将／ [指]
- kazama_location: K03047140, hanzi_entry: 磬／ [控]

The figures for the “手” (Hand) radical section in Ikeda et al. (2020) are corrected as follows. The corrected figures are shown in **bold**. For the “6 or more characters” category, there is one **Entry** which consists of 8 characters:

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
028	手 (Hand)	886	220	37	3	2	1	1,149	1,467

For the “木” (**Tree**) radical section (木部, *Mokubu*), the identification of **Entries** is problematic in the following instance:

- kazama_location: K03102341, hanzi_entry: 小／一 (櫃)／膳／一 (櫃) ,
definition: アケノヒツ (HH__)

According to the *Nihon Kokugo Daijiten* (*Nikkoku*), there are examples of ‘小櫃’ (*kobitsu*) in the *Wamyō Ruijushō* (*Wamyōshō*), and ‘膳櫃’ (*omono hitsu*) in the *Engi Shiki*. As it is preferable to treat these as separate **Entries**, the KRM data has been corrected as follows:

- kazama_location: K03102341, hanzi_entry: 小／一 (櫃) , definition: (Unannotated)
- kazama_location: K03102343, hanzi_entry: 膳／一 (櫃) , definition: アケノヒツ (HH__)

Please refer to the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

As a result of this correction, the number of **Entries** in the “木” (Tree) radical section now matches the count in Sakai (1967). The corrected figures are shown in **bold**:

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
029	木 (Tree)	1,044	245	40	4	0	1	1,334	1,676

5.3.4 *Butsuge-matsu* (仏下末 – Lower “Buddha” Fascicle, Last Part)

In the *Butsuge-matsu* section, discrepancies in **Entry** counts between Sakai (1967) and Ikeda et al. (2020) are found for the following radical section. The figures presented in the table below are from Ikeda et al. (2020):

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
039	火 (Fire)	407	91	11	1	1	2	513	648

For the “火” (**Fire**) radical section (火部, *Kabu*), Sakai (1967) counts 512 **Entries**, resulting in a difference of one **Entry** when compared to the count of 513 in Ikeda et al. (2020). There are three instances where the method of counting **Entries** is problematic. The discrepancy with Sakai (1967) is thought to arise from differences in calculating the count in one or more of these instances.

- `kazama_location`: K04038132, `hanzi_entry`: 燐, `definition`: (Unannotated)
- `kazama_location`: K04038141, `hanzi_entry`: 燐／𤇀火𤇀ホ一子／𤇀火𤇀十子, `definition`: 三俗勃字 音悖 サカリ

After the **Headword** ‘燐’ in **Entry** K04038132, there is a slight space. In Ikeda et al. (2020), this was counted as an unannotated **Entry**.

The original text for this section can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

- `kazama_location`: K04041732, `hanzi_entry`: 𤇀, `definition`: (Unannotated)
- `kazama_location`: K04041741, `hanzi_entry`: 𤇀𤇀𤇀火火一凡／𤇀, `definition` (corrected from `defifnition`): 俗通正 音瓊 ヒトリ 𤇀〈古〉 悖〈古〉 ヒトリ アルヤモメ (HHL_HHH) ヤモメ (HHH)

The **Original Glosses** for **Headword** ‘𤇀𤇀𤇀火火一凡／𤇀’ (K04041741) begin with the **Form Classification Tag** “俗通正” (*zoku tsū sei*). This might suggest that ‘𤇀’ (K04041732) and ‘𤇀𤇀𤇀火火一凡／𤇀’ were originally intended as a single **Entry**.

However, the blank space following ‘𤇀’ (K04041732) is distinct. Considering this, and given that there are instances where a **Form Classification Tag** can refer to a preceding **Entry**, Ikeda et al. (2020) counted ‘𤇀’ (K04041732) as a separate, unannotated **Entry**.

The original text for this section can be referred to on the left side of the [corresponding page](#) in the National Diet Library Digital Collections.

- `kazama_location: K04052540, hanzi_entry: 𤇗赤火, definition: 餘石反 盛也`
`カ、ヤク 𤇗赤火 ウレフ ュク 和ヤク, remarks (Compiler's Remark):` The
string '𤇗赤火' can be interpreted as either an **Embedded Item** (*umeji*) or as a note on a
variant character (*itaiji*).

This case is as explained in the **remarks** column. The string ‘𑖦赤火’ is written in a slightly larger size, and if considered an **Embedded Item**, it would increase the **Entry** count by one. However, since **Masamune’s Kanji Index** (正宗漢字索引, *Masamune Kanji Sakuin*) does not list ‘𑖦赤火’ as a separate **Headword**, it was treated as an annotation concerning a **variant character** (*itaiji*) within the **Original Glosses**.

The original text for this section can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

5.3.5 *Hōjō* (法上 – First “Dharma” Fascicle)

For the “水” (**Water**) radical section (水部, *Sui-bu*), attention should be paid to the following four **Entries**, which are associated with the note “此クタリ二水ノトコロニアリ” (These items are in the place of 𣶒 [*nisui*, the ice radical]):

- kazama_location: K05033810, hanzi_entry: 𪛗, definition: 「此クタリニ水ノトコロニアリ」 フチ (LH) (*Compiler's Note for K05033810: An **Interpolation Mark** appears immediately before this. This note indicates that these four **Entries** on this line should be moved to the “ 𪛗 ” (nisui) radical section. See Sakai, Jijun* [Character Order], p. 33.)**)
- kazama_location: K05033820, hanzi_entry: 減, definition: 俗減字 オトス (LLH) へク (LHV) へス 和ケム
- kazama_location: K05033830, hanzi_entry: 泝, definition: ソ、ク
- kazama_location: K05033840, hanzi_entry: 𪛘 𪛙 𪛚 𪛛 𪛜 𪛝 𪛞 𪛟 𪛠 𪛡 𪛢 𪛣 𪛤 𪛥 𪛦 𪛧 𪛨 𪛩 𪛪 𪛫 𪛬 𪛭 𪛮 𪛯 𪛰 𪛱 𪛲 𪛳 𪛴 𪛵 𪛶 𪛷 𪛸 𪛹 𪛺 𪛻 𪛼 𪛽 𪛾 𪛿 𪜀 𪜁 𪜂 𪜃 𪜄 𪜅 𪜆 𪜇 𪜈 𪜉 𪜊 𪜋 𪜌 𪜍 𪜎 𪜏 𪜐 𪜑 𪜒 𪜓 𪜔 𪜕 𪜖 𪜗 𪜘 𪜙 𪜚 𪜛 𪜜 𪜝 𪜞 𪜟 𪜠 𪜡 𪜢 𪜣 𪜤 𪜥 𪜦 𪜧 𪜨 𪜩 𪜪 𪜫 𪜬 𪜭 𪜮 𪜯 𪜰 𪜱 𪜲 𪜳 𪜴 𪜵 𪜶 𪜷 𪜸 𪜹 𪜺 𪜻 𪜼 𪜽 𪜾 𪜿 𪝀 𪝁 𪝂 𪝃 𪝄 𪝅 𪝆 𪝇 𪝈 𪝉 𪝊 𪝋 𪝌 𪝍 𪝎 𪝏 𪝐 𪝑 𪝒 𪝓 𪝔 𪝕 𪝖 𪝗 𪝘 𪝙 𪝚 𪝛 𪝜 𪝝 𪝞 𪝟 𪝠 𪝡 𪝢 𪝣 𪝤 𪝥 𪝦 𪝧 𪝨 𪝩 𪝪 𪝫 𪝬 𪝭 𪝮 𪝯 𪝰 𪝱 𪝲 𪝳 𪝴 𪝵 𪝶 𪝷 𪝸 𪝹 𪝺 𪝻 𪝼 𪝽 𪝾 𪝿 𪞀 𪞁 𪞂 𪞃 𪞄 𪞅 𪞆 𪞇 𪞈 𪞉 𪞊 𪞋 𪞌 𪞍 𪞎 𪞏 𪞐 𪞑 𪞒 𪞓 𪞔 𪞕 𪞖 𪞗 𪞘 𪞙 𪞚 𪞛 𪞜 𪞝 𪞞 𪞟 𪞠 𪞡 𪞢 𪞣 𪞤 𪞥 𪞦 𪞧 𪞨 𪞩 𪞪 𪞫 𪞬 𪞭 𪞮 𪞯 𪞰 𪞱 𪞲 𪞳 𪞴 𪞵 𪞶 𪞷 𪞸 𪞹 𪞺 𪞻 𪞼 𪞽 𪞾 𪞿 𪟀 𪟁 𪟂 𪟃 𪟄 𪟅 𪟆 𪟇 𪟈 𪟉 𪟊 𪟋 𪟌 𪟍 𪟎 𪟏 𪟐 𪟑 𪟒 𪟓 𪟔 𪟕 𪟖 𪟗 𪟘 𪟙 𪟚 𪟛 𪟜 𪟝 𪟞 𪟟 𪟠 𪟡 𪟢 𪟣 𪟤 𪟥 𪟦 𪟧 𪟨 𪟩 𪟪 𪟫 𪟬 𪟭 𪟮 𪟯 𪟰 𪟱 𪟲 𪟳 𪟴 𪟵 𪟶 𪟷 𪟸 𪟹 𪟺 𪟻 𪟼 𪟽 𪟾 𪟿 𪠀 𪠁 𪠂 𪠃 𪠄 𪠅 𪠆 𪠇 𪠈 𪠉 𪠊 𪠋 𪠌 𪠍 𪠎 𪠏 𪠐 𪠑 𪠒 𪠓 𪠔 𪠕 𪠖 𪠗 𪠘 𪠙 𪠚 𪠛 𪠜 𪠝 𪠞 𪠟 𪠠 𪠡 𪠢 𪠣 𪠤 𪠥 𪠦 𪠧 𪠨 𪠩 𪠪 𪠫 𪠬 𪠭 𪠮 𪠯 𪠰 𪠱 𪠲 𪠳 𪠴 𪠵 𪠶 𪠷 𪠸 𪠹 𪠺 𪠻 𪠼 𪠽 𪠾 𪠿 𪡀 𪡁 𪡂 𪡃 𪡄 𪡅 𪡆 𪡇 𪡈 𪡉 𪡊 𪡋 𪡌 𪡍 𪡎 𪡏 𪡐 𪡑 𪡒 𪡓 𪡔 𪡕 𪡖 𪡗 𪡘 𪡙 𪡚 𪡛 𪡜 𪡝 𪡞 𪡟 𪡠 𪡡 𪡢 𪡣 𪡤 𪡥 𪡦 𪡧 𪡨 𪡩 𪡪 𪡫 𪡬 𪡭 𪡮 𪡯 𪡰 𪡱 𪡲 𪡳 𪡴 𪡵 𪡶 𪡷 𪡸 𪡹 𪡺 𪡻 𪡼 𪡽 𪡾 𪡿 𪢀 𪢁 𪢂 𪢃 𪢄 𪢅 𪢆 𪢇 𪢈 𪢉 𪢊 𪢋 𪢌 𪢍 𪢎 𪢏 𪢐 𪢑 𪢒 𪢓 𪢔 𪢕 𪢖 𪢗 𪢘 𪢙 𪢚 𪢛 𪢜 𪢝 𪢞 𪢟 𪢠 𪢡 𪢢 𪢣 𪢤 𪢥 𪢦 𪢧 𪢨 𪢩 𪢪 𪢫 𪢬 𪢭 𪢮 𪢯 𪢰 𪢱 𪢲 𪢳 𪢴 𪢵 𪢶 𪢷 𪢸 𪢹 𪢺 𪢻 𪢼 𪢽 𪢾 𪢿 𪣀 𪣁 𪣂 𪣃 𪣄 𪣅 𪣆 𪣇 𪣈 𪣉 𪣊 𪣋 𪣌 𪣍 𪣎 𪣏 𪣐 𪣑 𪣒 𪣓 𪣔 𪣕 𪣖 𪣗 𪣘 𪣙 𪣚 𪣛 𪣜 𪣝 𪣞 𪣟 𪣠 𪣡 𪣢 𪣣 𪣤 𪣥 𪣦 𪣧 𪣨 𪣩 𪣪 𪣫 𪣬 𪣭 𪣮 𪣯 𪣰 𪣱 𪣲 𪣳 𪣴 𪣵 𪣶 𪣷 𪣸 𪣹 𪣺 𪣻 𪣼 𪣽 𪣾 𪣿 𪤀 𪤁 𪤂 𪤃 𪤄 𪤅 𪤆 𪤇 𪤈 𪤉 𪤊 𪤋 𪤌 𪤍 𪤎 𪤏 𪤐 𪤑 𪤒 𪤓 𪤔 𪤕 𪤖 𪤗 𪤘 𪤙 𪤚 𪤛 𪤜 𪤝 𪤞 𪤟 𪤠 𪤡 𪤢 𪤣 𪤤 𪤥 𪤦 𪤧 𪤨 𪤩 𪤪 𪤫 𪤬 𪤭 𪤮 𪤯 𪤰 𪤱 𪤲 𪤳 𪤴 𪤵 𪤶 𪤷 𪤸 𪤹 𪤺 𪤻 𪤼 𪤽 𪤾 𪤿 𪥀 𪥁 𪥂 𪥃 𪥄 𪥅 𪥆 𪥇 𪥈 𪥉 𪥊 𪥋 𪥌 𪥍 𪥎 𪥏 𪥐 𪥑 𪥒 𪥓 𪥔 𪥕 𪥖 𪥗 𪥘 𪥙 𪥚 𪥛 𪥜 𪥝 𪥞 𪥟 𪥠 𪥡 𪥢 𪥣 𪥤 𪥥 𪥦 𪥧 𪥨 𪥩 𪥪 𪥫 𪥬 𪥭 𪥮 𪥯 𪥰 𪥱 𪥲 𪥳 𪥴 𪥵 𪥶 𪥷 𪥸 𪥹 𪥺 𪥻 𪥼 𪥽 𪥾 𪥿 𪦀 𪦁 𪦂 𪦃 𪦄 𪦅 𪦆 𪦇 𪦈 𪦉 𪦊 𪦋 𪦌 𪦍 𪦎 𪦏 𪦐 𪦑 𪦒 𪦓 𪦔 𪦕 𪦖 𪦗 𪦘 𪦙 𪦚 𪦛 𪦜 𪦝 𪦞 𪦟 𪦠 𪦡 𪦢 𪦣 𪦤 𪦥 𪦦 𪦧 𪦨 𪦩 𪦪 𪦫 𪦬 𪦭 𪦮 𪦯 𪦰 𪦱 𪦲 𪦳 𪦴 𪦵 𪦶 𪦷 𪦸 𪦹 𪦺 𪦻 𪦼 𪦽 𪦾 𪦿 𪧀 𪧁 𪧂 𪧃 𪧄 𪧅 𪧆 𪧇 𪧈 𪧉 𪧊 𪧋 𪧌 𪧍 𪧎 𪧏 𪧐 𪧑 𪧒 𪧓 𪧔 𪧕 𪧖 𪧗

These four **Entries** have been assigned to the “ 冫 ” (*nisui*) radical section for the purpose of calculating **Entry** counts.

The original text for this section can be referred to on the left side of the [corresponding page](#) in the National Diet Library Digital Collections.

Sakai (1967) calculated 1,322 **Entries** for the “水” (Water) radical section, while Ikeda et al. (2020) calculated 1,321 **Entries**, resulting in a difference of one **Entry**. Upon review, the following **Entry** is a potential source of this counting discrepancy:

- kazama_location: K05001310, hanzi_entry: 水, definition (representing **Original Glosses**): 戸癸反 ミツ (HHV) カハ 月一 (水) ツキノサハリ 和スイ (LH)

The string ‘月一 (水)’ (moon-[substituting for] water; referring to menstruation, 月水 *gessui*) is a compound word. If this were treated as an **Embedded Item (umeji)** and counted as a separate **Entry**, the **Entry** counts of Sakai (1967) and Ikeda et al. (2020) for this radical section would become identical. However, the subsequent part of the **Original Glosses**, “和スイ (LH)” (a *Wa-on* pronunciation for ‘水’), pertains to the main **Headword** ‘水’. Identifying an embedded **Entry** in a way that interrupts the glosses for the main **Headword** is problematic. Therefore, this **Entry** (for ‘水’) is maintained as a single **Entry** as per Ikeda et al. (2020).

The original text for this section can be referred to on the left side of the [corresponding page](#) in the National Diet Library Digital Collections.

For the “足” (**Foot**) radical section (足部, *Sokubu*), Sakai (1967) counts 494 **Entries**, while Ikeda et al. (2020) count 493 **Entries**, a difference of one **Entry**. The following instance is likely related to this discrepancy:

- kazama_location: K05076311, hanzi_entry: 躑／一 (躑), definition (representing **Original Glosses**): 上馳(L) 又智音 或躑字 タチヤスラフ オソ シ, remarks (**Compiler's Remark**): Ikeda's note: “躑字” (the characters ‘躑’ and ‘字’) is written in a large size. It is considered part of the **Original Glosses**.

As noted in the remarks (the **Compiler's Remark**), one might consider counting “躑字” (the characters ‘躑’ and ‘字’ found in the gloss above) as a separate **Entry**. However, the character ‘躑’ is itself listed as the **Headword** of the very next **Entry**:

- kazama_location: K05076330, hanzi_entry: 躑, definition (representing **Original Glosses**): 音儔 タチモトホル タチヤスラフ (LH___)

Therefore, rather than considering ‘躑’ to be a duplicated **Headword** (or “躑字” to be an independent embedded **Entry**), it is considered more appropriate to interpret “躑字” in the first instance as characters within the **Original Glosses** that were simply written in a large size.

The original text for this section can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

5.3.6 *Hōchū* (法中 – Middle “Dharma” Fascicle)

In the *Hōchū* section, discrepancies in **Entry** counts between Sakai (1967) and Ikeda et al. (2020) are found for the following three radical sections. The figures presented in the table below are from Ikeda et al. (2020):

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
051	石 (Stone)	308	57	5	3	0	3	376	472
052	玉 (Jade)	294	76	8	1	3	1	383	496
057	心 (Heart)	730	161	13	1	2	1	908	1,111

For the “石” (Stone) radical section (石部, *Sekibu*), Sakai (1967) counts 375 **Entries**, while Ikeda et al. (2020) initially counted 376 **Entries**, a difference of one **Entry**. This discrepancy is likely related to the following instance:

- kazama_location: K06001320, hanzi_entry: 𠩺𠩺, definition (representing **Original Glosses**): 古 △在下

In the **Original Gloss** “△在下”, the ‘△’ symbol is written in a slightly larger size, which was misidentified as a separate **Headword** (contributing to the initial count of 376 by Ikeda et al.).

Additionally, an **Entry** where an **Omitted Character** in the **Headword** was supplied is the following:

- kazama_location: K06012741, hanzi_entry: 桃／花／ [石] , definition: 此間音タウクエシヤク (LHHHLLL)

The **Entry** count and total headword character count for the “石” (Stone) radical section are corrected as follows:

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
051	石 (Stone)	307	56	6	3	0	4	375	472

For the “玉” (Jade) radical section (玉部, *Gyokubu*), Sakai (1967) counts 384 **Entries**, while Ikeda et al. (2020) count 383 **Entries**, a difference of one **Entry**. The following **Entry** is likely related to this discrepancy:

- `kazama_location`: K06013430, `hanzi_entry`: 玉, `definition` (representing **Original Glosses**): 音夙 (T) 「シク」 又栗 (T) 「リク」 又欣救反 琢「ミカク」 玉を工也, `remarks` (**Compiler's Remark**): Ikeda's note: '栗' is an error for '粟'. The red ink mark on '玉' might be an **Morphosyntactic Glosses** (*wokototen*, ヲコト点) for 'を' (*wo*). '工也' is written in small characters in the manuscript, but it has been transcribed in large characters here because the *Guangyun* has the semantic gloss '琢玉工' (jade-carving artisan).

There is a possibility of treating ‘琢玉’ (jade carving), which appears in the gloss as ‘琢「ミ
カク」玉を’, as an **Embedded Item** (*umeji*). However, since ‘琢’ is listed as a separate
Headword elsewhere, it is likely appropriate to consider ‘琢玉’ as part of the **Original
Glosses** for ‘玉’.

The original text for this section can be referred to on the left side of the [corresponding page](#) in the National Diet Library Digital Collections.

For the “**心**” (**Heart**) radical section (心部, *Shinbu*), Sakai (1967) counts 909 **Entries**, while Ikeda et al. (2020) count 908 **Entries**, a difference of one **Entry**. The following **Entry** is likely related to this discrepancy:

- kazama_location: K06084521, hanzi_entry: 暮, definition (representing **Original Glosses**): 「注」 𠂇偏古 「注」 𠂇保言儻 〈籀〉, remarks (**Compiler's Remark**): Ikeda's note: Although '𠂇偏古' and '𠂇保言儻' are written in large characters, each is accompanied by the character '注' (annotation), indicating they are part of the **Original Glosses**.

Since ‘偏古’ and ‘保言儻’ are written in large characters, there is a possibility of counting them as **Headwords**. However, they are not characters that would typically be assigned to the “心” (Heart) radical section, and furthermore, they are explicitly marked with ‘注’ (annotation). Therefore, it is unlikely that Ikeda et al. (2020) miscounted by including these as separate **Entries** (implying the discrepancy may originate from Sakai’s count or another unclarified instance).

The original text for this section can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

For the “糸” (**Silk**) radical section (糸部, *Shibu*), there is no difference in the number of **Entries** between Sakai (1967) and Ikeda et al. (2020). However, a correction is made to the character count of the **Headword** in the following **Entry**:

- kazama location: K06121611, hanzi entry: 罟／綱, definition: ノアミ

This corrects a previous misidentification where the **Headword** was mistakenly interpreted as ‘四／不／綱’. As a result of this correction to the headword’s character composition, the breakdown of **Entry** counts by headword length and the total headword character count for this section are as follows (the total number of **Entries**, 736, remains unchanged):

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
059	糸 (Silk)	631	94	8	3	0	0	736	855

5.3.7 *Hōge* (法下 – Lower “Dharma” Fascicle)

In the *Hōge*, discrepancies in Entry counts between Sakai (1967) and Ikeda et al. (2020) are found for the following four radical sections. The figures presented in the table below are from Ikeda et al. (2020):

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
066	勹	29	4	0	0	0	0	33	37
068	雨	177	43	6	1	1	0	228	290
075	疒	234	138	23	1	1	2	399	603
080	寸	18	21	0	0	0	0	39	60

For the “勹” (**Wrap**) radical section (勹部, *Hōbu*), the following instance is problematic:

- kazama_location: K07057620, hanzi_entry: 躬, definition (representing **Original Glosses**): 音□麦羽 又穹 一躬 謹敬兒, remarks (**Compiler's Remark**): Ikeda’s note: Although ‘一躬’ is written in a slightly larger size, it is considered part of the **Original Glosses**.
- kazama_location: K07057640, hanzi_entry: 躬, definition (representing **Original Glosses**): 音躬

In the **Original Glosses** for ‘躬’ (K07057620), the ‘一’ in ‘一躬’ is a **Substitution Mark**. Thus, ‘一躬’ represents ‘躬躬’, and its semantic meaning is given as ‘謹敬兒’ (*jǐnjìngmào*; “appearance of being reverent and respectful”). **Masamune’s Kanji Index** lists ‘一 (躬) 躬’ as an **Entry**.

The character ‘𪔐’ appears in the *Guangyun* with the gloss “謹敬之兒。又音穹。” (Appearance of being reverent and respectful. Also pronounced *qióng* [穹]) under the Level tone (平声), *Dong* (東) rhyme, *xiaoyun* ‘弓’ (*gōng*): *jūróng qiè* (居戎切); and also as “謹敬之兒” (Appearance of being reverent and respectful) under the Level tone, *Dong* rhyme, *xiaoyun* ‘穹’ (*qióng*): *qùgōng qiè* (去宮切) [Departing tone reading for 穹]. The **Phonetic Gloss** “音𪔐麦羽” found in the *Myōgishō* is questionable. However, the accompanying “又穹” (also *qióng*) can be seen as indicating a pronunciation from the Level tone, *Dong* rhyme. Furthermore, ‘𪔐’ is found in the *Banshō Meigi* (万象名義) with “丘陸反。謹敬兒” and in the Song edition of the *Yupian* (宋本玉篇) with “丘六切。又丘弓切。𪔐𪔐謹敬兒”. Since ‘丘陸反’ (*qiūlù fǎn*) and ‘丘六切’ (*qiūliù qiè*) correspond to the Entering tone (入声), *Wu* (屋) rhyme, and *Xi* (溪) initial, they are likely scribal errors for ‘麴’ (yeast/leaven), which has the *fanqie* spelling “驅𪔐切” (*qūdī qiè*) in the *Guangyun*.

The next **Entry**, K07057640 for ‘𪔐’, has the **Phonetic Gloss** “音躬” (pronounced as ‘躬’). While ‘𪔐’ is not found in the *Guangyun*, the character ‘躬’ (*gōng*) cited in the gloss is listed in the *Guangyun* with the *fanqie* “居戎切” (*jūróng qiè*; Level tone, *Dong* rhyme, *xiaoyun* ‘弓’), making it homophonous with ‘𪔐’. Although ‘𪔐’ is not found in the *Banshō Meigi*, the Song edition of the *Yupian*, or the *Guangyun*, it does appear in the *Jiyun* (集韻) under the entry for “𪔐𪔐” with the gloss “謹敬也或作𪔐” (Reverent and respectful; also written as 𪔐) under the Level tone, *Dong* rhyme, *xiaoyun* ‘窮’ (*qióng*): *qúgōng qiè* (渠弓切).

Based on the above, it is difficult to consider ‘一 (𪔐) 𪔐’ in the Kanchi-in manuscript as a compound word; it is more likely a co-listing of **variant characters** (*itaiji*).

The original text for this section can be referred to on the left side of the [corresponding page](#) in the National Diet Library Digital Collections.

For the “雨” (Rain) radical section (雨部, *Ubu*), Sakai (1967) counts 226 **Entries**, while Ikeda et al. (2020) count 228 **Entries**, a difference of two **Entries**. The following example illustrates an instance where the identification of **Entries** is problematic:

- kazama_location: K07067330, hanzi_entry: 霆, definition (representing **Original Glosses**): 定 (R) 亭 (L) 挺 (H) 三音 霹靂 イナヒカリ (LVHL) イカツチ (H_HV_) , remarks (**Compiler's Remark**): Ikeda’s note: ‘霹靂’ is a **Semantic Gloss in Chinese**.

The characters ‘霹靂’ (*Hekireki*; thunderclap) are written in a slightly larger size. Furthermore, while this **Entry** for ‘霆’ occupies the space of two cells (or blocks; 2 格, *nikaku*), the segment ‘霹靂 イナヒカリ (__LVHL) ’ is written in the second cell, suggesting it could potentially have been a separate **Headword** (and thus a distinct **Entry**). However, since ‘霹靂’ is listed as a **Headword** elsewhere in the *Myōgishō*, and considering its content in this instance, it was judged appropriate to treat it as a phrase within the **Original Glosses** for ‘霆’.

The original text for this section can be referred to on the left side of the [corresponding page](#) in the National Diet Library Digital Collections.

Another problematic instance is the following example. Related preceding and succeeding **Entries** are also shown for context:

- kazama_location: K07068530, hanzi_entry: 雹, definition: 歩角反 アラレ (HHH) 和ハク ハウ
- kazama_location: K07068541, hanzi_entry: 霰, definition: 或
- kazama_location: K07068542, hanzi_entry: 雹, definition: (Unannotated)
- kazama_location: K07068611, hanzi_entry: 霰／霰／霰田, definition: 俗

The third **Entry**, K07068542 with **Headword** ‘雹’, appears at the end of its line and might seem continuous with the next **Entry** on the following line, K07068611 with **Headword** ‘霰／霰／霰田’. There is a slight blank space below ‘雹’ (K07068542). Furthermore, although the **Headwords** of the first **Entry** (K07068530) and the third **Entry** (K07068542) are both transcribed as ‘雹’, in the original manuscript, the lower part of the latter (‘雹’ in K07068542) is written in a form resembling ‘霰→霰’. It is thought that a blank space was intentionally left below it to accommodate some form of **Note on Character Form**.

However, the **Headword** of the last listed **Entry**, ‘霰／霰／霰田’ (K07068611), consists of **variant characters (itaiji)** of ‘霰’, as can be seen in the following examples from Volume 2 of the *Longkan Shoujian/Shoujing* (龍龕手鑑), under the “雨” (Rain) radical. Therefore, it is also conceivable that ‘雹’ (K07068542) and ‘霰／霰／霰田’ (K07068611) originally constituted a single **Entry**.

- location: Ls52b0802, hanzi_entry: 霰霰霰, definition: 三俗。 (Three popular forms.)
- location: Ls52b0805, hanzi_entry: 霰霰霰, definition: 三古。 (Three old forms.)

- location: Ls52b0808, hanzi_entry: 雹, definition: 正。蒲各反。雨冰也。七。
(Standard form. *Fanqie*: 蒲各反 (*pú gè fǎn*). Means ‘rain and ice’ (hail). Seven
(notes/entries).)

A comparison of the **Headword** characters from the Kanchi-in manuscript and the *Longkan Shoujian/Shoujing* is shown below. Only **Notes on Character Form** (字体注, *jitaichū*) are indicated; **Phonetic Glosses** and **Japanese Native Readings (*wakun*)** are omitted. A slash ‘/’ indicates a conceptual line break (for aligning the Kanchi-in sequence). Arabic numerals represent the order of appearance in the Kanchi-in manuscript; ‘x’ marks characters from the *Longkan Shoujian/Shoujing* list not found in the Kanchi-in manuscript’s corresponding sequence, and parentheses () are used for characters that are similar but not identical.

(Kanchi-in Manuscript) 1 雹 2 霤 或 3 雹 / 4 霤 5 霤 6 霤
 霤 俗
 (Longkan Shoujian/Shoujing) 5 霤 4 霤 (6) 霤 三俗 x 霤 2 霤
 x 霤 三古 1 霤 正 ...

The Kanchi-in manuscript sequence involves 6 character forms (or groups), while the *Longkan Shoujian/Shoujing* list shows 7 relevant character forms here. Their order of

description does not directly match. The characters marked with ‘x’, namely 霤 and 霤, from the *Longkan Shoujian/Shoujing* list are not found in the corresponding

Kanchi-in manuscript sequence. Character 3, 雹, and character 6, 霤, from the Kanchi-in manuscript do not have direct identical counterparts in this *Longkan*

Shoujian/Shoujing list. However, character 6 from the Kanchi-in manuscript, 霤, is similar to character (6), 霤, from the *Longkan Shoujian/Shoujing*.

It is presumed that the exemplar of a dictionary like the *Longkan Shoujian/Shoujing* that was consulted by the compiler(s) of the revised Kanchi-in manuscript of the *Ruiju Myōgishō* may have had questionable points or textual corruptions.

The original text for this section in the Kanchi-in manuscript can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

The original text for the relevant section in the *Longkan Shoujian/Shoujing* can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

For the “疒” (**Sickness**) radical section (疒部, *Daibu*), Sakai (1967) counts 400 **Entries**, while Ikeda et al. (2020) count 399 **Entries**, a difference of one **Entry**. The identification of **Entries** is problematic in the following instance:

- kazama_location: K07125841, hanzi_entry: 瘰／疒既, definition (representing **Original Glosses**): 俗通 古界反 𠂔𠂔白死月 正腎 𠂔, remarks (**Compiler's Remark**): Ikeda's note: The string '𠂔𠂔白死月' is an example of characters from the **Original Glosses** being written in a large size.

Although the string '𠂔𠂔白死月' is written in a large size and might appear to be a **Headword**, it does not contain the '疒' radical component. Therefore, it is not appropriate to classify it as a **Headword** belonging to the “疒” (Sickness) radical section.

The original text for this section in the Kanchi-in manuscript can be referred to on the upper right of the [corresponding page](#) in the National Diet Library Digital Collections.

For the “寸” (**Inch**) radical section (寸部, *Sunbu*), Sakai (1967) counts 41 **Entries**, while Ikeda et al. (2020) count 39 **Entries**, a difference of two **Entries**. This discrepancy is thought to be related to the following instance:

- kazama_location: K07143741, hanzi_entry: 戈／一 (射), definition (representing **Original Glosses**): イツル 六一 ムツマシ 賭一 ノリュミ

The strings '六一 (射)' and '賭一 (射)' appearing in the **Original Glosses** are written in a somewhat larger size. It is considered appropriate to treat each of these, along with their subsequent **Japanese Native Readings (wakun)**, as independent **Entries**. These are considered **Embedded Items (umeji)**, or compounds presented in the **Divided-Annotation Style (Bunchūshiki)**. If treated this way, this instance is corrected as follows:

- kazama_location: K07143741, hanzi_entry: 戈／一 (射), definition: イツル, remarks (**Compiler's Remark**): Ikeda's note: The segment '六一 ムツマシ 賭一 ノリュミ' (originally part of this entry's gloss) is likely an **Embedded Item (*umeji*)** (or items that should be separate entries).

- kazama_location: K07143743, hanzi_entry: 六／一（射）, definition: ムツマシ
- kazama_location: K07143745, hanzi_entry: 賭／一（射）, definition: ノリユミ

The figures for the “寸” (Inch) radical section in Ikeda et al. (2020) need to be corrected for the number of **Entries** as follows. The corrected figures are shown in **bold**:

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
080	寸 (Inch)	18	23	0	0	0	0	41	64

For the “示” (Altar/Display) radical section (示部, *Shibu*), there is no difference in the number of **Entries** between Sakai (1967) and Ikeda et al. (2020). However, an **Omitted Character** is recognized in the **Headword** of the following **Entry**:

- kazama_location: K07001830, hanzi_entry: 樹／ [神] , definition: コタマ (LHL)

As a result of supplying this omitted character, the breakdown of **Entry** counts by headword length and the total headword character count for this section are presented as follows (the total number of **Entries**, 232, remains unchanged):

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
061	示 (Altar/Display)	198	27	6	0	1	0	232	275

5.3.8 *Sōjō* (僧上 – Upper “Sangha” Fascicle)

In the *Sōjō* section, discrepancies in **Entry** counts between Sakai (1967) and Ikeda et al. (2020) are found for the following two radical sections. The figures presented in the table below are from Ikeda et al. (2020):

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
086	毛 (Fur)	60	30	9	3	0	2	104	173
087	食 (Eat)	120	73	17	1	0	2	213	333

For the “毛” (Fur) radical section (毛部, *Mōbu*), Sakai (1967) counts 104 **Entries**, while Ikeda et al. (2020) count 103 **Entries**, a difference of one **Entry**. This discrepancy is thought to be related to the following instance:

- `kazama_location`: K08100641, `hanzi_entry`: 毳 / 毳 / 毳 / 毳, `definition` (representing **Original Glosses**): マコケ (HHLV) カモ (HH) 音脆 (R) 「セイ」, `remarks` (**Compiler's Remark**): The **Japanese Native Readings** (*wakun*) are written as if they are side-line *kun* readings for '毳'. Corrected to treat '毳 / 毳 / 毳 / 毳' as a single **Entry**.

As noted in the `remarks` (the **Compiler's Remark**), the two **Japanese Native Readings** (*wakun*) are written as if they are side-line *kun* readings for the character '毳'.

Furthermore, in the original manuscript layout, there is a line break after '毳', and '毳' appears as a **Headword** at the beginning of the next line.

Since the character '毳' may not display correctly in all environments, the **Headword** in question, along with its associated readings from the **Original Glosses**, is shown using GlyphWiki images as follows. A slash '/' indicates a line break as found in the Kanchi-in manuscript's layout for this entry:

三 毳 毳 マコケ (HHLV) カモ (HH) / 毳 音脆 (R) 「セイ」

The character '毳' (*sui, zei*) has two pronunciations in the *Guangyun*: “此芮切” (*cǐ ruì qiè*; Departing tone, 祭韻, 清母 *Qing initial*) and “楚稅切” (*chǔ shuì qiè*; Departing tone, 祭韻, 穿二母 *Chuan II initial*, for the character 𧄢). The character '脆' also has the *fanqie* “此芮切”. The *Shuowen Jiezi*, under the “毳” radical section, states: “獸細毛也。从三毛。凡毳之屬皆从毳。” (Fine animal fur. Composed of three '毛' (fur) characters. All characters belonging to the 毳 category are derived from 毳). Considering this, it is appropriate to treat these

four characters (三, 毳, 毳, and 毳) collectively as a single **Basic Entry**. The Renjō-in manuscript also treats these four characters as a single **Entry**.

Regarding the **Japanese Native Readings** (*wakun*): The *wakun* “カモ” (*kamo*) is listed in the *Nihon Kokugo Daijiten* (*Nikkoku*) under the entry for “かも 【氈】” with the definition: “A carpet woven from animal fur; also refers to woolen products in general. Also *ori-kamo*.” Examples are found in the *Shinsen Jikyō* and the *Wamyō Ruijushō*. The *wakun* “マコケ” (*makoge*) is not listed in the *Nikkoku*. Masamune's Kana Index records “マコケ”. However, Mochizuki's *Wakun Shūsei* and Kusakawa's *Wakun Shūsei* list it as “ニコケ” (*nikoge*) with a *mama* (i.e., “as is,” indicating a direct transcription of a possibly problematic form) note.

The Maeda-bon manuscript of the *Iroha Jiruishō*, under the entry for ‘毳’, shows “ニコゲ” (HHLV). The *Nikkoku* defines “ニコゲ” (*nikoge*) as: “Fine, soft, short animal fur; also soft human hair. *Ubuge* (downy hair), *watage* (fluff).” Examples are found in the *Wamyō Ruijushō* and other texts.

The original text for this section in the Kanchi-in manuscript can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

Incidentally, Volume 1 of the *Longkan Shoujian/Shoujing* (龍龕手鑑), under the “毛” (Fur) radical section, shows the following related entries:

毛毳毳毳 四俗。(Four popular forms.) 毛 正。七
 稅昌稅二反。鳥獸細茸毛也。又斷也。亦姓五。(Standard form. *Fanqie* spellings: 七稅反 (*qī shuì fǎn*) and 昌稅反 (*chāng shuì fǎn*). Meaning: ‘Fine downy fur of birds and beasts. Also means to cut. Also a surname.’ Five (notes/entries in total for this group).)

The **Entry** count and total headword character count for the “毛” (Fur) radical section are corrected as follows:

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+char	No. of Entries	No. of Chars
086	毛 (Fur)	59	30	9	1	0	0	103	173

For the “食” (Eat/Food) radical section (食部, *Shokubu*), Sakai (1967) counts 214

Entries, while Ikeda et al. (2020) count 213 **Entries**, a difference of one **Entry**. This discrepancy is thought to be related to the following instance:

- kazama_location: K08104831, hanzi_entry: 餵/餵, definition (representing **Original Glosses**): 「カユ」 「モラフ (HHL)」 今正 音胡 鬻 <正> 餵也 モラフ (HHL) ネヤス (LH_) ヒサク (HH_) , remarks (**Compiler's Remark**): An example noted as ‘unknown’ (未詳, *mishō*) in the *Wamyō Ruijushō* but not present in the *Myōgishō* in this form; see *Senchūbon Wamyōshō* (Annotated Edition of the *Wamyō Ruijushō*), Vol. 4, p. 48 verso (Okada’s research, p. 97).

The **Japanese Native Readings (wakun)** ‘カユ’ (*kayu*) and ‘モラフ’ (*morau*; HHL) are written to the bottom right and bottom left, respectively, of the **Headword** ‘餵’. While they could potentially be seen as constituting independent **Entries**, the **Headword** ‘餵/餵’ is an example of co-listed **variant characters (itaiji)**. Furthermore, the **Original Glosses**

include the **Form Classification Tag** ‘今正’ (*konsei*; “current/standard”), and the Renjō- in manuscript treats ‘餽／飧’ as a single **Entry**.

Another problematic instance is the following example:

- `kazama_location`: K08110441, `hanzi_entry`: 饗／饗／饗／饗／飮／号丙食,
`definition`: 俗 (Popular form)

As this **Headword** contains many complex or rare characters, it is shown below using GlyphWiki images. A slash ‘/’ indicates a line break (as found in the manuscript for this sequence):

饗 饗
或正叨通 他刀反 貪財 吳刀(R)

(Glyph notes for : 或正叨通 (*waku sei tō tsū*; Alternative, Standard, Also Common forms).

Fanqie: 他刀反 (*tā dāo fǎn*). Meaning: 貪財 (greedy for wealth). *Go-on*: 刀(R) (*tō*).

饗 饗 饗 饗 飮 饗
/ 俗 (Popular form)

饗 飮

There is a line break between 饗 and 飮, which might suggest that the **Headword** was split into two **Entries** at this point. However, as this is a sequence of **variant characters** (*itaiji*) of ‘饗’, it is considered more appropriate to treat it as a single **Entry**.

The original text for this section in the Kanchi-in manuscript can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

5.3.9 Sōchū (僧中 – Middle “Sangha” Fascicle)

In the Sōchū section, discrepancies in Entry counts between Sakai (1967) and Ikeda et al. (2020) are found for the following two radical sections. The figures presented in the table below are from Ikeda et al. (2020):

No.	Radical	1- char	2- char	3- char	4- char	5- char	6+ char	No. of Entries	No. of Chars
095	弓 (Bow)	61	32	7	1	0	0	101	150

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
111	鳥 (Bird)	307	184	35	6	1	0	533	809

For the “弓” (**Bow**) radical section (弓部, *Kyūbu*), Sakai (1967) counts 102 Entries, while Ikeda et al. (2020) count 101 Entries, a difference of one Entry. This discrepancy is thought to be related to the following instance:

- kazama_location: K09028141, hanzi_entry: 𠂔弓取／𠂔弓亥／𠂔弓丁／𠂔弓貨,
definition: 未詳 (Unknown)

There is a line break in the manuscript between ‘𠂔弓丁’ (the third character of this Headword) and ‘𠂔弓貨’ (the fourth character of this Headword), which raises the possibility of counting them as two separate Entries.

The Headword ‘𠂔弓取／𠂔弓亥／𠂔弓丁／𠂔弓貨’ with its Original Gloss “未詳” (Unknown) appears as follows (line break indicated by /):

𠂔𠂔𠂔𠂔
/ 未詳 (Unknown)

The original text for this section in the Kanchi-in manuscript can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

For the “鳥” (**Bird**) radical section (鳥部, *Chōbu*), Sakai (1967) counts 532 Entries, while Ikeda et al. (2020) count 533 Entries, a difference of one Entry. Currently, no specific instances that might account for this discrepancy in Entry counting have been identified.

5.3.10 *Sōge* (僧下 – Lower “Sangha” Fascicle)

In the *Sōge* section, discrepancies in Entry counts between Sakai (1967) and Ikeda et al. (2020) are found for the following four radical sections. The figures presented in the table below are from Ikeda et al. (2020):

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
113	魚 (Fish)	232	104	41	2	0	0	379	571
114	虫 (Insect)	365	257	27	9	1	5	664	1,041
117	鬼 (Ghost)	51	18	1	2	1	2	75	121

No.	Radical	1-char	2-char	3-char	4-char	5-char	6+ char	No. of Entries	No. of Chars
120	雜 (Miscellaneous)	1,076	331	73	14	4	3	1,501	2,056

For the “魚” (**Fish**) radical section (魚部, *Gyobu*), Sakai (1967) counts 378 **Entries**, while Ikeda et al. (2020) count 379 **Entries**, a difference of one **Entry**. This discrepancy is thought to be related to the following instance:

- kazama_location: K10008640, hanzi_entry: 鰐, definition: 音萇 ワニ (LL)
- kazama_location: K10008711, hanzi_entry: 鰐, definition: 或
- kazama_location: K10008712, hanzi_entry: 鰐, definition: 正
- kazama_location: K10008713, hanzi_entry: 鰐, definition: (Unannotated)
- kazama_location: K10008720, hanzi_entry: 鰐, definition: *フナ

In the original Kanchi-in manuscript, the last two characters (‘鰐’ from K10008713 and ‘鰐’ from K10008720) are written as if they form a single **Entry**. These two characters are not listed as **Headwords** in the Renjō-in manuscript.

The sequence of glyphs and the *wakun* ‘フナ’ appears as:

- 鰐 音萇 ワニ(LL) (with its own glosses)
- 鰐 或 (annotated 或 - variant)
- 鰐 正 (annotated 正 - standard)
- 鰐 (unannotated)
- 鰐 フナ (*funa*)

Indeed, it is conceivable that the **Japanese Native Reading** (*wakun*) ‘フナ’ (*funa*) was

intended as an annotation for both characters (4) 鰐 and (5) 鰐 together.

Alternatively, at some stage of the revised compilation, there might have been a perceived

difference in glyph form between (1) 鰐 and (4) 鰐, and they might have been

listed to distinguish them. The three characters (2) 鰐, (3) 鰐, and (4) 鰐 are written within a single cell (1 マス, *hitomasu*). The common *kun* reading for ‘鰐’ is ‘ワニ’ (*wani*), so it is hesitant to read it as ‘フナ’ (*funa*). It is preferable to consider ‘フナ’ as corresponding only to ‘鰐’.

The original text for this section in the Kanchi-in manuscript can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

For the “虫” (**Insect**) radical section (虫部, *Chūbu*), Sakai (1967) counts 665 **Entries**, while Ikeda et al. (2020) count 664 **Entries**, a difference of one **Entry**. This discrepancy is thought to be related to the following instances:

- kazama_location: K10030731, hanzi_entry: 𧈧𧈧虫虫→虫／𧈧𧈧虫虫→蠹／蠹／𧈧𧈧市→蟲／𧈧𧈧土→蟲／𧈧兩𧈧虫虫 (line break)／𧈧虫𧈧杀父, definition: 俗𧈧𧈧十口→各俗

This is an **Entry** listing **variant characters** (*itaiji*), but there is a line break in the middle of the **Headword**.

The original text for this section in the Kanchi-in manuscript can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

Another problematic instance is the following:

- kazama_location: K10038541, hanzi_entry: 𧈧虫𧈧蚕蚕／𧈧𧈧天天蟲／𧈧 (line break)／𧈧→虫／𧈧／𧈧玄虫, definition: 俗

This is an **Entry** listing **variant characters** (*itaiji*) of ‘蠶’, but there is a line break in the middle of the **Headword**.

The original text for this section in the Kanchi-in manuscript can be referred to on the right side of the [corresponding page](#) in the National Diet Library Digital Collections.

For the “鬼” (**Ghost**) radical section (鬼部, *Kibu*), Sakai (1967) counts 74 **Entries**, while Ikeda et al. (2020) count 75 **Entries**, a difference of one **Entry**. This discrepancy is thought to be related to the following instances:

- kazama_location: K10048541, hanzi_entry: 魑／𧈧／𧈧勿鬼 (line break)／魑／魑／魑／魑／魑, definition: 俗

This is an **Entry** listing **variant characters** (*itaiji*), but there is a line break in the middle of the **Headword**.

- kazama_location: K10050340, hanzi_entry: 𪛗我鬼, definition: (Unannotated), remarks (Compiler's Remark): Ikeda's note: Could this be continuous with the following 'Unknown' (未詳, *mishō*) **Entry**?
- kazama_location: K10050411, hanzi_entry: 𪛗／𪛗鬼有／𪛗鬼麦／𪛗鬼同／𪛗鬼達／𪛗鬼田／𪛗鬼能／𪛗鬼幸／𪛗鬼辜／𪛗田鬼, definition: 未詳 (Unknown)

These were counted as two **Entries**, but if '𪛗我鬼' (K10050340) is continuous with the following 'Unknown' **Entry**, the count would decrease by one.

The original text for these sections in the Kanchi-in manuscript can be referred to on the right side of the [corresponding page](#) and the right side of the [following page](#) in the National Diet Library Digital Collections.

For the “**雑**” (**Miscellaneous**) **radical section** (雑部, *Zatsubu*), Sakai (1967) counts 1,500 **Entries**, while Ikeda et al. (2020) count 1,501 **Entries**, a difference of one **Entry**. This discrepancy is thought to be related to the following instance:

- kazama_location: K10081830, hanzi_entry: 𪛗, definition: ツミ
- kazama_location: K10081840, hanzi_entry: 𪛗, definition: (Unannotated), remarks (Compiler's Remark): A **variant character** (**itaiji**) of '𪛗'.

The character represented as '𪛗' (in K10081830) is written in the manuscript like 𪛗. The character '𪛗' (K10081840) is not found in the Kazama Shobō edition. It can be confirmed in the Kichō Toshō Fukuseikai edition and both the old and new Tenri editions, but it is an easily overlooked example.

The original text for this section in the Kanchi-in manuscript can be referred to on the left side of the [corresponding page](#) in the National Diet Library Digital Collections.

Also in the “**雑**” (**Miscellaneous**) **radical section**, there was an error in the data for the following **Entry**:

- kazama_location: K10075411, hanzi_entry: 多／少, definition: ソコハク (LHLVL)

The **Headword** was previously misidentified as only '多' and has been corrected to '多／少'.

As a result of these corrections, the breakdown of **Entry** counts by headword length and the total headword character count for this section are as follows:

No.	Radical	1- char	2- char	3- char	4- char	5- char	6+ char	No. of Entries	No. of Chars
120	雜 (Miscellaneous)	1,075	332	73	14	4	4	1,501	2,057

5.3.11 Summary of Entry Counts and Total Headword Character Counts by Radical Section

It was necessary to correct the **Entry** counts from Ikeda et al. (2020) for the following three radical sections: No. 001 “人” (Man), No. 029 “木” (Tree), and No. 080 “寸” (Inch).

For other radical sections where discrepancies with other tallies (e.g., Sakai (1967)) exist, these variations are generally due to differences in the criteria for identifying and counting **Entries**. In such cases, the counts from Ikeda et al. (2020) have been retained as is.

Reflecting the corrections made based on the [verifications discussed above](#), a complete list of **Entry** counts for all radical sections is provided below. The presented total headword character counts (*keishutsuji-sū*, 掲出字数) also incorporate corrections for clear instances of **Omitted Characters**.

Butsujō (仏上 – Upper “Buddha” Fascicle)

No.	Radical	1- char	2- char	3- char	4- char	5- char	6+ char	No. of Entries	No. of Chars
001	人 (Man)	614	205	28	4	2	3	856	1,153

5.3.12 Addendum

Regarding K10108221 ‘陟厘’:

The Kanchi-in manuscript presents ‘𪛗厘’ (a ligature-like form combining ‘陟’ and ‘厘’) as a single character, and Masamune’s Index and Kusakawa’s *Wakun Shūsei* follow this interpretation. Mochizuki’s *Wakun Shūsei*, however, treats ‘陟厘’ as two separate characters. The Dōen-bon manuscript of the *Wamyō Ruijushō* (Volume 17, “Vegetables” section) has an entry for ‘陟釐’ with the annotation: “音纏 一本作厘 和名 阿乎乃利” (Pronunciation *ten* [for 陟]; one manuscript has 厘 [for 釐]; Japanese name: *Awonori*). The *Shinsen Jikyō* shows ‘陟釐 青乃利’ (*Shokuri Aonori*) (under “Miscellaneous characters for temporary needs” - 臨時雜要字, *rinji zatsuyō ji*). The *Iroha Jiruishō* (Maeda-bon) has ‘陟釐 アヲノリ’ (*Shokuri Awonori*) (under “ア – Plants”). Considering this evidence, it seems appropriate to interpret ‘陟厘’ in the Kanchi-in manuscript as two separate characters.

This interpretation would affect the calculation of the total headword character count (*keishutsuji-sū*), but this has not been reflected in the data tables presented above. (Noted December 15, 2022).

March 14, 2024: Corrected errors in the aggregated numerical figures (in the preceding tables).

5.4 Types and Notation Formats of Character Form Notes

This section explains the types of annotations such as ‘正’ (standard), ‘通’ (common), and ‘俗’ (popular/vulgar), as well as the notational relationship between these annotations and the characters they annotate. It also examines the recorded content using ‘滴’ as an example, providing material for considering how annotations should be created.

5.4.1 Form Classification Tags and Notation Formats

Lee Kyeong Won⁶ refers to annotations such as ‘正’ (standard), ‘通’ (common), and ‘俗’ (popular/vulgar) as a **Form Classification Tag** (字級, *ziji*).

Regarding the notation formats of **Notes on Character Form** and the types of **Form Classification Tags**, there is a study by Zhang Xinfang⁷. That study narrows its focus to six notation formats and seven **Form Classification Tags**, and organizes their patterns of occurrence.

Here, let us introduce the figures surveyed in the Kanchi-in manuscript. The scope of the survey is the “水” (water), “𣎵” (ice), and “言” (speech) radical sections, which are common to both the Zushoryō and Renjō-in manuscripts.

In the revised compilation of the *Ruiju Myōgishō*, the character forms appearing within the **Original Glosses** are divided into the following six types according to their notation format. Here, ‘○’ indicates a character form and ‘★’ indicates a **Form Classification Tag**.

1. ○★
2. ★○
3. ★為○
4. ★作○
5. ★○字
6. ★為○字

The **Form Classification Tags** are considered to be of the following seven types.

1. 正 (standard)
2. 俗 (popular/vulgar)
3. 通 (common)
4. 今 (current/present form)

⁶ Lee Kyeong Won, *Zui-Tang Ziyangxue Yanjiu* (隋唐字樣學研究; A Study of Sui and Tang Dynasty Character Lexicography), PhD diss., National Taiwan Normal University, Graduate Institute of Chinese, 1997.

⁷ Zhang Xinfang, “Chūmonchū no Kanji Jitai no Kisai kara Mita Kaihenbon-kei *Ruiju Myōgishō*” (注文の中の漢字字体の記載からみた改編本系『類聚名義抄』; The Revised-Compilation Lineage of the *Ruiju Myōgishō* as Seen from the Notation of Chinese Character Forms within the Original Glosses), *Hokkaidō Daigaku Daigakuin Bungaku Kenkyūka Kenkyū Ronshū* (北海道大学大学院文学研究科研究論集; Hokkaido University Graduate School of Letters Research Bulletin) 17 (2017).

5. 或 (alternative)
6. 古 (archaic)
7. 俗通 (popular/vulgar & common)

5.4.2 Notation Status in the Kanchi-in Manuscript (Water, Ice, Speech Radicals)

Summarizing the notation status of character forms appearing within the **Original Glosses**, for the scope of the “水” (water), “𣎵” (ice), and “言” (speech) radical sections in the Kanchi-in manuscript, produces the table below. The classification and figures are based on Zhang Xinfang’s survey.

5.4.3 ‘滴’ and Its Related Items

5.4.3.1 *The Kanchi-in Manuscript’s Record of ‘滴’*

Let us take up ‘滴’ (Kanchi-in manuscript, *Hōjō* 23), the example cited by Zhang Xinfang, and examine the state of its notation format and **Form Classification Tag**. **Notes on Character Form** are shown in **bold**.

滴 滴 漈 漈 滴 漈

二正 或 二俗 俗滴字

Since Zhang Xinfang’s presentation is simplified, the full text of the **Original Glosses** is given below. Line breaks have been inserted as appropriate, and numbers have been assigned.

1. 滴 滴 二正 丁狄反 シタ、ル(LL_) 音的 アマツヒ

2. 滴 或
3. 涕滴 二俗
4. 滴 音商 阿懸名
5. 涕 音帝 音テイ(LH) シタ、ル(LLLVL) アマツヒ 水ツミ 又都歴反
俗滴字

Items 1, 2, and 3 are all in the ‘○★’ notation format. Based on the **Phonetic Gloss** ‘丁狄反’ and the **Japanese Native Reading (wakun)** ‘シタ、ル’ in item 1, this is presumably

滴

滴

. ‘滴’ is also given the glyph form 滴 in both the *Tenrei Banshō Meigi* and the *Shinsen Jikyō*, which can be confirmed via a [CHISE](#) search. ‘滴’ is not included in HNG (Hanzi Normative Glyphs Database), but ‘適,’ which has ‘商’ as one of its constituent components, is written with the ‘商’ portion in the form of ‘商’ in Japanese manuscripts (the *Miroku Jōshō*, *Inseidaikyō*, and *Bussetsu Daikyō*).

滴

Meanwhile, item 4 has the same glyph form as item 1’s 滴, but its **Original Glosses** read “音商 阿懸名,” suggesting it should be understood as ‘滴.’

Item 1 has wormhole damage and is difficult to decipher, but **Masamune’s Index** reads

滴

滴

滴

item 1’s 滴, item 3’s 滴, and item 4’s 滴 as the same glyph form.

5.4.3.2 *The Renjō-in Manuscript's Record of ‘滴’*

Among the revised-compilation manuscripts other than the Kanchi-in manuscript, this passage survives only in the Renjō-in manuscript, where it appears as follows (Middle volume, fascicle 1, folio 12 verso).

1. 滴 滴 二正 丁狄反 シタ、ル(LL_) アマツヒ 音的
2. 滴 或
3. 滴 滴 二俗
4. 滴 音商 阿懸名
5. 滴 音帝 音テイ(LL) アマツヒ シタ、ル(LLLVL) 水ツミ 又都歴反
俗滴字

滴

For item 1, the ‘レ’ (*shinnyō*, motion radical) of 滴 has a single dot in the original text, but appears with two dots here for reasons of glyph construction.

In the Renjō-in manuscript, items 1, 3, and 4, which shared the same glyph form

滴

in the Kanchi-in manuscript, are distinguished as

滴 滴

, and

滴

, respectively.

The content of the Renjō-in manuscript is more consistent and rational than that of the Kanchi-in manuscript. However, it is difficult to determine from this example alone

whether the Renjō-in-style content became corrupted into the Kanchi-in form, or whether the Kanchi-in content contained an inconsistency that was subsequently corrected in the Renjō-in manuscript. Further examples of this kind need to be collected and examined.

It should also be noted that the order of the **Original Glosses** for item 1 differs between the two manuscripts. However, the Kanchi-in manuscript's **Original Glosses** for this item are, unusually, written across three lines; it is presumed that they were originally written across two lines, with ‘音的’ at the end. The Renjō-in manuscript also presents this passage across three lines, but there, ‘音的’ appears at the end of the **Original Glosses**, following the **Japanese Native Reading (wakun)**, which is consistent with the usual practice.

5.4.3.3 *The Longkan Shoujian/Shoujing's Record of ‘滴’*

In the *Longkan Shoujian/Shoujing* (龍龕手鏡／手鑑), the “水” (water) radical is contained in Fascicle 2. While the Korean edition lacks this section, the Song edition gives ‘滴’ as follows (Fascicle 2, “水” radical, No. 3, Entering tone).

1. 滌 俗
2. 滴 今
3. 滴 二正音的水一也四

These three items all concern ‘滴’. Compared with the revised-compilation manuscripts, there are differences in both the order of presentation and the **Form Classification Tags** used. The revised compilation presents them in the order “二正” → “或” → “二俗,” with “二正” appearing first. The *Longkan Shoujian/Shoujing*, by contrast, presents them in the order “俗” → “今” → “二正,” with “二正” appearing last. Looking at the **Form**

Classification Tags, both agree in tagging 滌 as “俗” and 滴 as “正.”

However, the revised compilation tags 滴 as “正,” while the *Longkan*

適
滴

Shoujian/Shoujing tags the similar glyph form as “今.” There is likewise a

discrepancy in that the revised compilation tags as “或,” while the *Longkan Shoujian/Shoujing* tags it as “正.”

Meanwhile, ‘滴’ appears in a different location (Fascicle 2, “水” radical, No. 3, Level tone).

滴

音商一河縣名又都歷反

For ‘滴,’ a homophone **Phonetic Gloss** “音商,” a **Semantic Gloss in Chinese** “一河縣名,” and a *fanqie* spelling for an alternate reading, “又都歷反,” are given. The **Semantic Gloss in Chinese** “一河縣名” means that “滴河” is the name of a county (縣, *xiàn*). The *Book of Sui* states “滴河開皇十六年置” (Dihe was established in the 16th year of the Kaihuang era), a county name established in 596 (Kaihuang 16), corresponding to present-day Shanghe County in Jinan City, Shandong Province. The revised compilation’s “阿懸名” is grammatically unintelligible and questionable, but ‘阿’ may reasonably be regarded as a scribal error for ‘河.’ It is presumed that this error arose from parsing “滴河、縣名” (Dihe, a county name) as “滴、河縣名” instead of correctly as “滴河、縣名.”

Setting that aside, when used as the county (place) name “滴河,” the reading is “音商”; separately from this, there is also the reading “又都歷反.” The *Guangyun* gives ‘滴’ under the Entering tone (入声), *Xi* rhyme (錫韻), *xiaoyun* ‘的’: *dūlì qiè* (都歷切), with the gloss “水滴也, 亦作滴” (“[means] to drip water; also written 滴”), from which we know that “又都歷反” corresponds to ‘滴.’ In other words, this shows that while ‘滴’ is read “音商” as the county (place) name “滴河,” it is also used interchangeably with ‘滴,’ read as “都歷反.”

‘滴’ and its related items are treated in detail in the Zushoryō manuscript, the original compilation, and various points warrant further examination; for now, this discussion will stop here.

5.5 Types and Decipherment Problems of Phonetic Glosses

In examining **Phonetic Glosses**, comparison with the *Guangyun*'s phonetic glosses is fundamental. In the original compilation of the *Myōgishō*, citations from the *Tōgū Qieyun* (東宮切韻) are frequent, and it is expected that **Phonetic Glosses** derived from *Qieyun*-lineage rhyme books are likewise numerous in the revised compilation. In the original compilation of the *Myōgishō*, citations from the original *Yupian* (原本玉篇) and the *Tenrei Banshō Meigi* are about as frequent as those from the *Tōgū Qieyun*, so collation of the Kanchi-in manuscript's **Phonetic Glosses** against these must also be carried out. The most frequently cited source in the original compilation of the *Myōgishō* is Xuanying's *Yiqiejing yinyi*, so the Kanchi-in manuscript's **Phonetic Glosses** must likewise be collated against the *Yiqiejing yinyi*. Additionally, the original compilation of the *Myōgishō* also contains **Phonetic Glosses** derived from the *Wamyō Ruijushō*, which sometimes diverge from the Middle Chinese phonological system.

However, depending on how one counts, the Kanchi-in manuscript contains approximately 24,000 **Phonetic Glosses**, and collation will take considerable time. First, using the *Guangyun* as a reference, we will investigate whether each **Headword** appears there, its rhyme group, its *fanqie* spelling, and its *xiaoyun* character, among other points. Next, for **Phonetic Glosses** that do not match the *Guangyun*, we will examine them in turn against the *Tenrei Banshō Meigi*, the Song edition of the *Yupian*, the *Yiqiejing yinyi*, the *Wamyō Ruijushō*, and other sources.

Although there is no direct citation in the original compilation of the *Myōgishō*, the revised compilation contains entries similar to those in the *Longkan Shoujian/Shoujing*, so reference to the *Longkan Shoujian/Shoujing* is also indispensable.

5.5.1 Types of Phonetic Glosses

In terms of notational form, there are **Fanqie spellings**, homophone-character glosses, **Kana glosses**, and **Tone Marks**.

In terms of content, there are *Seion* (正音, standard pronunciations), *Kan-on*, *Wa-on*, and *Go-on*.

5.5.2 Fanqie Spellings

The following is a passage where **Headwords** not recorded in the *Guangyun* appear in succession.

- **kazama_location**: K01016330, **hanzi_entry**: 伶, **definition**: 紺音 渠廉反 古樂人
- **kazama_location**: K01016340, **hanzi_entry**: 伶, **definition**: 俗命字 丘鼓反 呼莛反

- `kazama_location`: K01016410, `hanzi_entry`: 𡵓, `definition`: 俗企字

Let us divide these three entries according to the differences in the content of their **Original Glosses**, number them in order of appearance, and add a commentary to each.

- `kazama_location`: K01016330, `hanzi_entry`: 仝, `definition`:
 1. 紺音, `remarks`: Not found in the *Guangyun*. ‘紺’ appears in the *Guangyun* as 古暗切 (Departing tone, *Kan* rhyme).
 2. 渠廉反, `remarks`: *Tenrei Banshō Meigi*: 渠廉反. Level tone, *Yan* rhyme, *Qun* initial.
 3. 古樂人, `remarks`: *Tenrei Banshō Meigi*: 古樂人也.
- `kazama_location`: K01016340, `hanzi_entry`: 𡵓, `definition`:
 1. 俗企字, `remarks`: ‘企’ appears in the *Shuowen Jiezi* as ‘人在山上’ (a person atop a mountain).
 2. 丘豉反, `remarks`: Not found in the *Guangyun*. ‘企’ appears in the *Guangyun* as 許延切 (Level tone, *Xian* rhyme). ‘丘豉反’ corresponds to the Departing tone, *Zhi* rhyme, *Xi* initial. ‘企’ appears in the *Guangyun* as both 丘弭切 (Rising tone, *Zhi* rhyme) and 去智切 (Departing tone, *Zhi* rhyme); this corresponds to the latter reading.
 3. 呼莛反, `remarks`: *Longkan Shoujian/Shoujing*: ‘𡵓 許延反。輕也。二。’ (Fascicle 1, ‘人’ radical).
- `kazama_location`: K01016410, `hanzi_entry`: 𡵓, `definition`:
 1. 俗企字

The last one, K01016410 ‘𡵓’, is at Unicode U+2CF7E (𡵓), but may not display

𡵓.

depending on the environment. Displayed via GlyphWiki, it appears as

Now, K01016340 ‘𡵓’ does not appear in the *Guangyun*. Nor does it appear in the *Tenrei Banshō Meigi* or the Song edition of the *Yupian*. The *Longkan Shoujian/Shoujing* gives ‘許延反’ (Level tone, *Xian* rhyme), which is close to the Kanchi-in manuscript’s ‘呼莛反’.

The Kanchi-in manuscript additionally records ‘丘豉反’ (Departing tone, *Zhi* rhyme). This *fanqie* spelling appears in Xuanying’s *Yiqiejing yinyi*, Fascicle 4, in the first fascicle of the *Great Consecration Sūtra* (大灌頂經), as:

郁佺 丘豉反。經文作佺、非也。（高麗本）

‘佺’ agrees between the Kongō-ji and Saihō-ji manuscripts, but the Nanatsu-dera manuscript writes ‘你’.

Additionally, in Xuanying’s *Yiqiejing yinyi*, Fascicle 5, in the first fascicle of the *Sūtra of the Spells of the Seven Buddhas* (七佛神呪經), it appears as:

目佺 丘豉反。（高麗本）

Few old manuscripts survive for this passage, and the Nanatsu-dera manuscript writes ‘你’. It is not possible to determine which of these two is correct, but it seems reasonable to regard the Kanchi-in manuscript’s ‘丘豉反’ as deriving from the *Yiqiejing yinyi*.

Searching the Taishō Tripiṭaka for ‘郁佺’ in the *Great Consecration Sūtra*, the corresponding passage appears to be in the *Sūtra of the Seven Myriad Two Thousand Spirit-King Protector Bhikṣus Spoken by the Buddha at the Consecration* (佛說灌頂七萬二千神王護比丘呪經, Taishō No. 1331, translated by Śrīmitra), which reads ‘神名闍羅尼郁□イ企目 * □イ企’ (Taishō vol. 21, 496a). Searching for ‘目佺’ in the *Sūtra of the Spells of the Seven Buddhas*, several instances of ‘目□イ企’ are used in the *Great Dhāraṇī Spirit-Spell Sūtra Spoken by the Seven Buddhas and Eight Bodhisattvas* (七佛八菩薩所說大陀羅尼神呪經, Taishō No. 1332). Both ‘郁□イ企’ and ‘目□イ企’ are examples of Sanskrit phonetic transliteration.

Finally, let us also look at the entries surrounding the three entries discussed above.

- kazama_location: K01016320, hanzi_entry: 佺, definition: 俗佺字 又俗佺字歟
- kazama_location: K01016330, hanzi_entry: 佺, definition: 紺音 渠廉反 古樂人
- kazama_location: K01016340, hanzi_entry: 佺, definition: 俗佺字 丘豉反 呼莛反
- kazama_location: K01016410, hanzi_entry: □イ企, definition: 俗企字
- kazama_location: K01016421, hanzi_entry: 你/你, definition: 尼(LV)尔反 ナムチ イマ ヲヒ

The **Headwords** are shown via GlyphWiki as follows.

佺 佺 佺 佺 你 你

The first one, K01016320 ‘儉’, is presumably related to the note “經文作儉、非也” (“the sutra text writes it as 儉, which is incorrect”) found in Xuanying’s *Yiqiejing yinyi*, Fascicle 4, in the first fascicle of the *Great Consecration Sūtra*:

郁儉 丘鼓反。經文作儉、非也。

Additionally, ‘儉’ appears in the *Longkan Shoujian/Shoujing* as follows.

- location: La0390903, hanzi_entry: 儉, definition: 俗。乃叶反。又舊藏作弃。在七佛神咒經。（高麗本）

儉

The Korean edition of the *Longkan Shoujian/Shoujing* writes ‘儉’ as 儉, which agrees with the Kanchi-in manuscript.

K01016421 ‘你／你’ is a glyph form similar to the preceding ‘儉’ and ‘𠂔イ企’.

5.5.3 Homophone-Character Glosses

Homophone glosses (同音字注, *dōonji-chū*) are also called **Similar sound notes** (類音注, *ruion-chū*). These are annotations that indicate a **Headword**’s pronunciation using a single homophonous or near-homophonous character, mostly in the form ‘音○’ or ‘○音.’ For two-character compounds, the marker ‘二音’ (“two readings”) may be appended, giving the form ‘○△二音.’

For example, ‘留’ has ‘音流,’ indicating it is read with the pronunciation of ‘流.’ The two-character compound ‘鷓鴣’ has ‘焦(L)「セウ」遼(L)「レウ」二音,’ recording the **Similar sound notes** for ‘鷓’ and ‘鴣’ together under a single ‘二音.’ Special cases that also indicate tone, such as ‘音鴛之上声’ (“pronounced as 鴛, Rising tone”), are classified under “Other.”

5.5.4 Kana Glosses

Kana glosses (仮名音注, *kana-onchū*) are phonetic glosses written in katakana. Irregular examples that use Chinese characters to indicate a palatalized (*yōon*) or voiced (*dakuon*) sound are also included among **Kana glosses**.

For example, ‘正’ has ‘和者ウ,’ indicating a palatalized sound using Chinese characters, and ‘堂’ has ‘俗云墮ウ,’ indicating a voiced sound using Chinese characters.

5.5.5 Tone Marks

Tone Marks indicate the tonal category (the four tones, or six tones) and the voiced/unvoiced distinction, applied to **Headwords** and to the characters used within **Phonetic Glosses**. Following a specification change in March 2025, KRM represents these with a single Roman letter, as shown below.

Category	Symbol
平 (Level)	L
平輕 (Light Level)	F
上 (Rising)	H
去 (Departing)	R
入 (Entering)	T
入輕 (Light Entering)	S
濁 (Voiced)	V
No tone mark	–
Nasal symbol	N

5.5.6 Fanqie Spellings Easily Mistaken for Katakana

K03103430	楔	先結反	始死一齒	又工八反	門雨邊木	ニハサクラ	ニハクサ
K04019630	尫	工八反	又斤音	又五點反	一尫行不正		

The first one, ‘楔’, has two readings in the *Guangyun*: 古黠切 (Entering tone, *Xia* rhyme, *xiaoyun* 戛) and 先結切 (Entering tone, *Xie* rhyme, *xiaoyun* 屑); ‘工八反’ corresponds to 古黠切. Masamune’s Index and Kusakawa’s *Wakun Shūsei* record ‘工八反’ as ‘エハメ’ (*ehame*), but this is an example that should be classified as a *fanqie* spelling rather than a **Japanese Native Reading (wakun)**.

The second one, ‘尫’, appears in the *Guangyun* as 古拜切 (Departing tone, *Guai* rhyme, *xiaoyun* 誡), but the *Tenrei Banshō Meigi* gives 公八反, the *Shinsen Jikyō* gives 公八公鑄二反, and the Song edition of the *Yupian* gives 公拜公鑄二切 — all of which record a *fanqie* spelling for the Entering tone, *Xia* rhyme (‘公八’). Masamune’s Index and Kusakawa’s

Wakun Shūsei record this as ‘コハメ’ (*kohame*), but this too is an example that should be classified as a *fanqie* spelling rather than a **Japanese Native Reading (*wakun*)**.

5.6 Types and Quantities of Semantic Glosses in Chinese

A **Semantic Gloss in Chinese** (義注, *gichū*) is an annotation of meaning that uses Chinese characters. It is also called a **Semantic Gloss in Chinese** in literary Chinese (漢文義注, *kanbun gichū*).

5.6.1 Character Count of Semantic Glosses in Chinese

The Kanchi-in manuscript of the *Ruiju Myōgishō* contains approximately 12,600 **Semantic Glosses in Chinese**. Classifying these by the number of Chinese characters used in each gloss yields the following.

No. of Characters	No. of Examples
1	approx. 2,300
2	approx. 6,100
3	approx. 2,100

No. of Characters	No. of Examples
4	approx. 1,100
5	approx. 500
6+	approx. 500
Total	approx. 12,600

According to this, glosses of two characters are the most numerous, at approximately 6,100 — nearly half of the approximately 12,600 total **Semantic Glosses in Chinese**.

5.6.1.1 *One-Character Semantic Glosses in Chinese*

A one-character **Semantic Gloss in Chinese** is a gloss in which the ‘也’ of the pattern ‘C 也’ has been omitted. When a single **Semantic Gloss in Chinese** follows a **Phonetic Gloss**, and there is no risk of confusion with a **Note on Character Form** or **Phonetic Gloss**, the ‘也’ is often omitted. In the pattern ‘C 也’, **Headword A** is glossed by Chinese character C using the form ‘C 也’; in this case, A and C are shown to be synonymous.

Examples 1. **hanzi_entry**: 迂, **definition**: 進 2. **hanzi_entry**: 丕, **definition**: 多

For No. 1, ‘迂’, the *Shuowen Jiezi* gives ‘進也’ (to advance), and the *Guangyun* and the Song edition of the *Yupian* agree. ‘迂’ does not appear in the *Banshō Meigi*, but ‘迂’ is glossed there as ‘進也’. For No. 2, ‘丕’, the *Shuowen Jiezi* and the *Guangyun* give ‘大也’ (great), which does not match; but the *Banshō Meigi* gives ‘多也’ (many), which is the source of this gloss.

5.6.1.2 *Two-Character Semantic Glosses in Chinese*

The two-character form using ‘也’ numbers more than approximately 2,400.

Examples - **hanzi_entry**: 微, **definition**: 細也 - **hanzi_entry**: 偉, **definition**: 大也

Among the other types, common ones include ‘C 名’ (approx. 480), ‘B—(A)’ (approx. 250), ‘—(A)B’ (approx. 190), ‘B 声’ (approx. 80), ‘B 属’ (approx. 80), and ‘B 兒’ (approx. 70).

Several examples are given below.

Examples 1. **hanzi_entry**: 渭, **definition**: 水名 2. **hanzi_entry**: 猥, **definition**: 狼一 3. **hanzi_entry**: 負, **definition**: 荷一 4. **hanzi_entry**: 茱, **definition**: 一萸 5. **hanzi_entry**: 等, **definition**: 一閑 ナヲサリカテラ 6. **hanzi_entry**: 唄, **definition**: 梵声 7. **hanzi_entry**: 黽, **definition**: 蛙属 8. **hanzi_entry**: 粲／然, **definition**: 明兒

No. 1, ‘渭’ (the Wei River), is one of the tributaries of the Yellow River. It was on the northern bank of the Wei River that Taigong Wang, while fishing, met King Wen of Zhou. Within the *Myōgishō*, ‘水名’ (river name) occurs in 90 examples, followed by ‘地名’ (place name) with 33, ‘縣名’ (county name) with 31, ‘國名’ (state name) with 29, and ‘木名’ (tree name) with 22. This is an example of the ‘C 名’ type.

No. 2, ‘猥’, uses the **Substitution Mark** ‘一’ to show that the character is used as part of the compound ‘狼猥’ (*lángbèi*, flustered). This is an example of the ‘B一(A)’ type.

No. 3, ‘負’, with ‘荷負’ (to carry), is likewise an example of the ‘B一(A)’ type.

No. 4, ‘茱’, uses the **Substitution Mark** ‘一’ to show that the character is used as part of the compound ‘茱萸’ (*zhūyú*, the fruit of the oleaster). ‘茱’ has the *Guangyun fanqie* ‘市朱切’ (Level tone, *Yu* rhyme, *Chan* III initial, homophonous with 殊), and ‘萸’ has ‘羊朱切’ (Level tone, *Yu* rhyme, *Yu* IV initial, homophonous with 逾), making ‘茱萸’ a *diéyùn* (疊韻, rhyming) compound. This is an example of the ‘一(A)B’ type.

No. 5, ‘等’ (等), uses the **Substitution Mark** ‘一’ to show that the character is used as part of the compound ‘等閑’ (idle, careless). This example is accompanied by the **Japanese Native Reading (wakun)** ‘ナヲサリカテラ’, derived from the line “秋月春風等閑度” (Autumn moon, spring breeze — days pass idly by) in the *Biography of the Lute* (琵琶行) of the *Collected Works of Bai Juyi* (白氏文集) (Funaki, Shuntarō. “Hakushi Monjū to Iroha Jiruishō” [The *Hakushi Monjū* and the *Iroha Jiruishō*]. *Niigata Daigaku Jinbun Kagaku Kenkyū* 121 (2007)). ‘等閑’ is a compound formed by so-called ‘埋字’ (*umeji*, “buried-character”) or ‘分註式’ (*bunchū-shiki*, “split-gloss”) construction. This is likewise an example of the ‘一(A)B’ type.

No. 6, ‘唄’, is glossed ‘梵聲’ (Sanskrit chant), an explanation similar to the *Guangyun*’s ‘梵音’ and the Song edition of the *Yupian*’s ‘梵音聲’.

No. 7, ‘𧈧’, is glossed ‘蛙屬’ (frog family), presumably based on the *Guangyun*’s ‘蛙屬’. The ‘B 屬’ type also includes examples such as animals (‘豕屬’, ‘鹿屬’), plants (‘橘屬’, ‘梨屬’), and objects (‘楸屬’, ‘匙屬’).

No. 8, ‘粲然’, is glossed ‘明兒’ (a bright, clear appearance), meaning a clear or evident state. ‘兒’ is a variant character of ‘貌’ and is frequently used as a suffix indicating appearance or condition. In old manuscripts, it is also sometimes written as ‘貞’ or ‘皃’.

5.6.1.3 *Three-Character Semantic Glosses in Chinese*

A three-character **Semantic Gloss in Chinese** glosses **Headword A** in the form ‘CD 也’. This form is also sometimes used to gloss a two-character idiom **Headword AB**.

Of the approximately 2,100 three-character **Semantic Glosses in Chinese**, the form ending in ‘也’ accounts for approximately 700, or about one-third. Besides ‘也’, characters such as ‘兒’, ‘名’, and ‘声’ are also used, each with more than 50 examples. Several examples are given below.

Examples - hanzi_entry: 仞, definition: 一尋也 - hanzi_entry: 彗, definition: 衆星兒 - hanzi_entry: 韶, definition: 舜樂名 - hanzi_entry: 鼻, definition: 喘息声

An explanation of **Semantic Glosses in Chinese** of four characters or more is omitted here.

5.6.2 *Types of Semantic Glosses in Chinese*

5.6.2.1 *Single-Character Semantic Glosses*

A **Single-character Semantic Gloss** (单字注) conveys the meaning of a Chinese character either as a one-character **Semantic Gloss in Chinese**, or as a two-character **Semantic Gloss in Chinese** with ‘也’ added. For a detailed explanation, see the “One-Character Semantic Glosses in Chinese” and “Two-Character Semantic Glosses in Chinese” sections above.

5.6.2.2 *Appearance Glosses (‘～兒’)*

This is a frequently used form for expressing shape or manner in **Semantic Glosses in Chinese**. Examples include ‘睨 目出兒’, ‘峯 一客山兒’, and ‘慙 無知之兒’, which are transcriptions and citations of Chinese lexicographic sources (小学書). This ‘～兒’ type is frequently used in the early-Heian-period dictionary *Shinsen Jikyō*, but becomes less common in the *Ruiju Myōgishō*. The most distinctive feature of the treatment of ‘兒’ (兒) in the *Ruiju Myōgishō* is that, rather than simply reproducing the ‘～兒’ (in the manner of ～) **Semantic Gloss in Chinese** (a state description) found in Chinese classics and earlier dictionaries, it fully translates and absorbs that description into practical Japanese predicates (verbs and adjectives) or phrases.

1. ‘𦉰’ (視遽兒 → *miru, odoroku*) Where ‘𦉰’ is defined in sources such as the *Shuowen Jiezi* as ‘視遽兒’ (the appearance of looking with alarm), the *Ruiju Myōgishō* decomposes and translates this into the two verbs ‘ミル’ (*miru*, to see) and ‘オドロク’ (*odoroku*, to be startled) as **Japanese Native Readings (wakun)**. This is an example of an abstract manner being replaced with concrete Japanese verbs of visual action.
2. ‘瞋’/‘暄’ (揺動兒 → *matataku, majiroku*) Where the *Shinsen Jikyō* stage describes this group of “blinking” words in literary Chinese as ‘開闔目數揺動兒’ (the appearance of opening and closing the eyes and moving them repeatedly), the *Ruiju Myōgishō* reduces and organizes them into the Japanese verbs of eye movement ‘マタタク’ (*matataku*) and ‘マジロク’ (*majiroku*).

5.6.2.3 Parallel Couplets

In the *Shinsen Jikyō*, examples such as ‘阜 小陵曰丘、无名曰阜’ and ‘耆艾 六十曰耆、五十曰艾’ — glossing the meaning of a single character or idiom (**Compound Expression**) through a parallel-couplet form ‘〜曰甲、〜曰乙’ (“... is called A, ... is called B”) — are often seen. However, such examples are rarely used in the *Ruiju Myōgishō*. The only three confirmed instances are ‘覲 男曰覲 女曰巫’, ‘邦 大曰邦 小曰國’, and ‘獯 牝曰一牡 曰狼’.

In addition, ‘衡從’ (*yokosama tatasama*) derives from the line “蓺麻如之何、衡從其畝” in the “Nanshan” ode of the “Guofeng” section of the *Classic of Poetry* (詩經), corresponding to the parallel-couplet structure of ‘衡’ and ‘從’ in that line; its **Japanese Native Reading (wakun)** is likewise given in the parallel-couplet structure ‘ヨコサマ’ and ‘タタサマ’. The Seikadō Bunko manuscript (of the *Maoshi Zhengjian* 毛詩鄭箋) reads this as ‘ヨコサマニシ、タタサマニス’, but in the *Ruiju Myōgishō* the predicate elements ‘ニシ’ and ‘ニス’ are omitted, compressing it into the nominal parallel couplet ‘ヨコサマタタサマ’ — an abbreviation and streamlining suited to dictionary-style description.

5.6.2.4 Classification-name Glosses (‘〜名’)

‘〜名’ denotes a classificatory name for a thing or place. Since it is difficult to distinguish from ‘一名’ (see below), it is described here as ‘〜名’. Classificatory names for things include ‘木名’ (tree name), ‘草名’ (plant name), ‘鳥名’ (bird name), and ‘獸名’ (animal name). Classificatory names related to place names include ‘國名’ (state name), ‘縣名’

(county name), ‘邑名’ (settlement name), ‘地名’ (place name), ‘山名’ (mountain name), ‘谷名’ (valley name), ‘水名’ (river name), and ‘江名’ (river name).

5.6.2.5 *Alternative-Name Notation* (‘一名’)

‘一名’ is a term used to list an alternative name, as in ‘螻蛄一名一一’ for ‘碩鼠’, ‘慈石一名’ for ‘玄石’, and ‘一名匙’ for ‘匕’.

5.6.2.6 *Compound Expressions* (連文)

Compound Expression (連文, *renbun*), also called *renji* (連字), is a method of textual exegesis (*kunko*) that combines two synonymous or near-synonymous Chinese characters into a compound to more clearly indicate the meaning or usage of a single character; this is called ‘連文釈義’ (*renbun shakugī*) or ‘連文解義’ (*renbun kaigi*). For example, glossing the meaning of ‘囂’ with the **Compound Expression** ‘頑囂’, or glossing the meaning of ‘雇’ with ‘雇賃’, are instances of this.

Among such **Compound Expressions**, many form a *shuāngshēng* (双声, alliterative compound), in which the two characters share the same initial consonant, or a *diéyùn* (疊韻, rhyming compound), in which they share the same rhyme. These use phonetic resonance to describe the state of a thing sensorially and precisely. For example, ‘頑囂’ (*wányín*) is an example of a *shuāngshēng* compound, indicating stubbornness and a lack of understanding of reason; ‘潺湲’ (*chányuán, sen’en*) indicates the murmuring sound of flowing water. In the *Ruiju Myōgishō*, glossing ‘囂’ with ‘頑一’ and ‘潺’ with ‘潺一’ are examples of using a **Compound Expression** to explain a character’s meaning.

There are also **Compound Expressions** (state modifiers) formed by adding the suffix ‘然’ to a Chinese character to describe a state or psychological condition, in the form ‘～然’. For example, ‘騞然’ describes the sound/appearance of cutting something with a blade, and ‘睟然’ describes a lustrous appearance. In the *Ruiju Myōgishō*, glossing ‘騞’ with ‘一然’ and ‘睟’ with ‘一然潤澤兒’ are examples of using this construction.

5.6.3 *Semantic Glosses in Chinese Mistaken for Katakana*

Scribal errors in **Semantic Glosses in Chinese** are common. It is important to search for the source text and confirm what meaning is being explained and in what context the gloss is used.

- **kazama_location:** K03009110, **hanzi_entry:** 髒, **definition:** 力遙反 尻骨謂之八一(謂-詣イ、八一-ハキ 〈イ〉) 侖作臙非

This entry derives from Xuanying's *Yiqiejing yinyi*. It can be surmised that the gloss text ‘八一’ was transcribed as ‘八一’, and mistakenly read as the katakana **Japanese Native Reading (wakun)** ‘ハキ’.

- **kazama_location:** K07039310, **hanzi_entry:** 𪛗, **definition:** 音同 等

Kusakawa's *Wakun Shūsei* records ‘等’ as ‘ホ’ (*ho*), but this does not appear as ‘ホ’ in Masamune's Index. The *Shuowen Jiezi* glosses ‘𪛗’ as ‘等也’. Kusakawa mistook the semi-cursive/cursive form (行草書) of ‘等’, which resembles ‘ホ’, for a **Japanese Native Reading (wakun)**. Masamune, it is presumed, correctly read it as a Chinese character. The note ‘音同’ indicates that the pronunciation is the same as that of the preceding character ‘齊’.

5.7 Foundational Materials for Annotating Japanese Native Readings (*wakun*)

This section first lists the reference works cited by abbreviation, along with other reference works. It then provides several concrete examples illustrating the identification of **Japanese Native Readings (wakun)**.

5.7.1 References

5.7.1.1 References Cited by Abbreviation

For determining the word forms of *wakun*, the following indexes must always be consulted. As they are used frequently, they are indicated here by abbreviation.

- **Masamune's Index** (正宗索引, *Masamune Sakuin*): Masamune Atsuo, ed. *Ruiju Myōgishō, Dainikan: Kanji Sakuin, Kana Sakuin* (類聚名義抄 第二卷 漢字索引仮名索引, *Ruiju Myōgishō*, Vol. 2: Kanji Index, Kana Index). Tokyo: Kazama Shobō, 1955.
- **Mochizuki's Wakun Collection** (望月和訓集成, *Mochizuki Wakun Shūsei*): Mochizuki Ikuko, ed. *Ruiju Myōgishō: Yonshu Shōten-tsuki Wakun Shūsei* (類聚名義抄：四種声点付和訓集成, *Ruiju Myōgishō: A Collection of Wakun with Four Types of Tone Marks*; Kasama Sakuin Sōkan 44). Tokyo: Kasama Shoin, 1974.
- **Kusakawa's Wakun Collection** (草川和訓集成, *Kusakawa Wakun Shūsei*): Kusakawa Noboru, ed. *Gohon Taishō Ruiju Myōgishō Wakun Shūsei* (五本対照類聚名義抄和訓集

成, A Collection of *Wakun* from Five Collated Manuscripts of the *Ruiju Myōgishō*). Tokyo: Kyūko Shoin, 2000.

- **Nakamura's Monzen** (中村文選, *Nakamura Monzen*): Nakamura Munehiko. *Kujōbon Monzen Kokunshū* (九条本文選古訓集, Old Kokun Readings of the *Monzen*, Kujō Manuscript). Tokyo: Kazama Shobō, 1983.
- **Kunten Goi Shūsei** (訓点語彙集成, *Kunten Goi Shūsei*): Tsukishima Hiroshi, ed. *Kunten Goi Shūsei* (訓点語彙集成, A Comprehensive Collection of *Kunten* Vocabulary). 8 vols. and 1 supplementary vol. Tokyo: Kyūko Shoin, 2007–2009.

The following are consulted as Japanese-language dictionaries, Kanji-Japanese dictionaries, and reference tools for literary Chinese.

- **Nikkoku** (日国, *Nikkoku*): *Nihon Kokugo Daijiten Dainihan* Henshū linkai and Shōgakukan Kokugo Jiten Henshūbu, eds. *Nihon Kokugo Daijiten* (日本国語大辞典, Comprehensive Japanese Dictionary). 2nd ed. Tokyo: Shōgakukan, 2000–2002. Content made available via JapanKnowledge starting November 2006.

5.7.2 Identifying *Wakun*

On rare occasions, an **Original Gloss** that is not in fact a **Japanese Native Reading** (**wakun**) may mistakenly be treated as one. A few concrete examples are given below to illustrate this. The passage in question in each example is shown in **bold**.

5.7.2.1 An Example Where Distinguishing a *Wakun* from a Kana Phonetic Gloss Is at Issue

- kazama_location: K01032610, hanzi_entry: 𪛗イ𪛗, original_entry: 𪛗イ𪛗, definition: 汜音 ハム

Kusakawa's Wakun Collection records this as “ハム” (*hamu*), treating it as a *wakun*, but it is in fact a **Kana gloss** (仮名音注), not a *wakun*.

The **Headword** is written in the original manuscript as “𪛗イ巳”, with “巳” as the phonetic component, while the **Homophone gloss** reads “汜音” (“pronounced as 汜”). This character “汜” has two readings — “符咸切” (Level tone, *Xián* rhyme, *xiaoyun* 凡) and “孚梵切” (Departing tone, *Fàn* rhyme, *xiaoyun* 汎) — and it is best understood that the **Kana gloss** “ハム” was recorded to indicate this pronunciation. If so, the **Headword** “𪛗イ巳” would be expected to read “𪛗イ巳” instead. In Unicode, “𪛗イ巳” corresponds to U+2CF62 (𪛗), and “𪛗イ巳” to U+3436 (巳), but “𪛗イ巳” cannot be confirmed as an assigned character.

5.7.2.2 An Example Where a Scribal Error in a Chinese Character Was Mistaken for Kana

- **kazama_location:** K06011410, **hanzi_entry:** 砂, **definition:** 音沙「サ」 イサコ (HH_) フ(一云)スナコ (LLL) 俗沙

The passage in question is the part reading “フ(一云)スナコ (LLL)”.

Masamune's Index and **Kusakawa's Wakun Collection** record this as “マスナコ” (*masunako*), whereas **Mochizuki's Wakun Collection** records it as “スナコ” (*sunako*). Which of these is correct?

For “砂”, the Zushoryō manuscript gives “順云和一以佐古 (HHV) 一云須奈古 (LLV)”, citing “順” — that is, Minamoto no Shitagō's *Wamyō Ruijushō* (和名抄) — as its source. The *Senchūbon Wamyōshō* (箋注本和名抄, an annotated recension of the *Wamyō Ruijushō*) gives, in its “Heaven and Earth” section (天地部) of Fascicle 1: “砂 和名以佐古又須奈古”. This being so, the “フ” found in the original text of the Kanchi-in manuscript is not the katakana “マ” (*ma*), but rather a scribal error for “一云” (“alternatively called”). It is therefore appropriate to record this as “スナコ” (*sunako*), as **Mochizuki's Wakun Collection** does.

Let us take up one more example.

- **kazama_location:** K02135520, **hanzi_entry:** 腊, **definition:** キタヒ-フ (HHH_) 久也 キタヒモフ (HHH_) [音] 昔 小牛全干也

Masamune's Index and **Kusakawa's Wakun Collection** interpret the phrase “小牛全干也” at the end of the **Original Gloss** as a *wakun*. However, it is better understood as a **Semantic Gloss in Chinese** (漢文義注).

First, regarding “小牛”: **Masamune's Index** reads it as “小（し）牛” (with 小 as a variant form of ホ), suggesting that the character シ may have been dropped; **Kusakawa's Wakun Collection** enters it as “ホモノ” (possibly “ホシモノ”), transliterating it as “小牛”, with “ヒモノ?” noted as a remark. In addition, **Kusakawa's Wakun Index** marks “小牛” as *sic* (mama) under the entry “ヒモノ”.

Next, regarding “全干也”: **Masamune's Index** and **Kusakawa's Wakun Collection** record this as “人モ” and “テ、” respectively.

However, “小牛全干也” is not a *wakun*, but a **Semantic Gloss in Chinese**. The commentary on the phrase “凡田獸之脯腊” in the “Offices of Heaven” (天官) section of the *Rites of Zhou* (周礼) gives: “腊、小物全乾者” (according to the *Kangxi Zidian*). The Kanchi-in manuscript's “小牛” poses no problem when read as the Chinese characters “小物”. As for the “全干也” portion, if read as Chinese characters, there is a difference between “干” and “乾”. “干” is given in the *Guangyun* as “古寒切” (Level tone, *Hán* rhyme); it is homophonous with “乾”, and the two characters are used interchangeably.

Now, does the Kanchi-in manuscript's “小牛全干也” refer directly to the *Rites of Zhou*, or is it an indirect reference? If indirect, one would expect it to derive from Xuanying's *Yiqiejing yinyi* or from Gu Yewang's original *Yupian*. Since the surviving fragments and quoted remnants of the original *Yupian* do not preserve this entry, we instead consult the *Tenrei Banshō Meigi* and the Song edition of the *Yupian*; searching these two works for “腊” yields the following. For reference, the text of the *Guangyun* is also given.

- 腊 胥亦反。久也、小物全干也。（万象名義、2 帖 66 裏）
- 腊 思亦切。乾肉也。《周禮》：腊人掌乾肉。（宋本玉篇、上 71 表）
- 腊 乾肉見經典（広韻・入声昔韻、昔：思積切）

Comparing these, the Kanchi-in manuscript's “小牛全干也” agrees with the *Tenrei Banshō Meigi*'s “小物全干也”, and it can be concluded with confidence that it derives from the *Tenrei Banshō Meigi*. However, it remains unclear whether this citation of the *Tenrei*

Banshō Meigi was already present in the original compilation of the *Myōgishō*, or whether it was added as an augmentation in the revised compilation.

5.8 Concrete Examples of Annotation Description

5.8.1 Foreword

5.8.1.1 A Trial Draft of the Annotations

How annotations should be created, and further, how the completed annotations should be published, are matters currently under consideration.

As a trial, some examples of annotations have been created here. Comments and feedback would be most welcome. Note that some items that should be annotated remain blank — for example, **K01062610** 匳. These are intended to be filled in and revised in the future.

5.8.1.2 Texts Used

The **Main Text** of the Kanchi-in manuscript of the *Ruiju Myōgishō* that serves as the subject of annotation here is page 62 of the *Butsujō* (仏上) volume (the Tenri edition, folio 34 verso). For this passage, a full-size, high-resolution color facsimile sample is published on the Yagi Shoten website, from *Ruiju Myōgishō Kanchi-in-bon* (類聚名義抄 観智院本; *Shin Tenri Toshokan Zenpon Sōsho* [New Tenri Library Rare Books Series], vols. 9–11; Yagi Shoten, 2018).

<https://company.books-yagi.co.jp/wp-content/uploads/2018/03/95596.pdf>

A facsimile from the Kichō Tosho Fukuseikai (1937) can be viewed in the National Diet Library Digital Collections. The URL for *Butsujō* page 62 is as follows.

<https://dl.ndl.go.jp/info:ndljp/pid/2586891/37>

For the Renjō-in manuscript, reference is made to *Sanpō Ruiju Myōgishō* (鎮国守国神社蔵本三宝類聚名義抄; *Sanpō Ruiju Myōgishō*, Held by Chinkoku Shukoku Shrine; Benseisha, 1986).

In the New Japanese Classical Text Comprehensive Database (新日本古典籍総合データベース) of the National Institute of Japanese Literature, the manuscript held by the Archives and Mausolea Department of the Imperial Household Agency (書陵部) can be viewed. The URL for the passage corresponding to page 62 of the *Butsujō* volume in the Kanchi-in manuscript is given below.

<https://kotenseki.nijl.ac.jp/biblio/100256105/viewer/75>

For the Kōzan-ji manuscript, reference is made to *Sanbō Ruiji-shū Kōzan-ji-bon* (三宝類字集 高山寺本; *Shin Tenri Toshokan Zenpon Sōsho*, vol. 8; Yagi Shoten, 2016).

The best-known exemplars of the Sainenji manuscript are those held by Tenri Central Library and Kansai University.

Since the Tenri Central Library exemplar is unpublished, a facsimile must be obtained by applying directly to the library.

In the New Japanese Classical Text Comprehensive Database of the National Institute of Japanese Literature, the Kansai University exemplar can be viewed. The URL for the passage corresponding to page 62 of the *Butsujō* volume in the Kanchi-in manuscript is given below.

<https://kotenseki.nijl.ac.jp/biblio/100302544/viewer/43>

In addition, digitized microfilm images of the Archives and Mausolea Department exemplar can be viewed. The URL for the passage corresponding to page 62 of the *Butsujō* volume in the Kanchi-in manuscript is given below.

<https://kotenseki.nijl.ac.jp/biblio/100256105/viewer/37>

Comparing the Tenri Central Library, Kansai University, and Archives and Mausolea Department exemplars, the Kansai University exemplar appears to contain a certain number of scribal errors and omissions. For viewing the Sainenji manuscript online, the Archives and Mausolea Department exemplar is likely preferable.

5.8.1.3 *Conventions*

Locations in the Kanchi-in manuscript are indicated in the form K01062121. This indicates the first character of the item found in Fascicle 1, page 62, line 1, column 2 of the Kanchi-in manuscript. The final digit indicates the character's position within the **Entry**: 0 for an **Entry** with a single **Headword** character, or 1, 2, ... in order for **Entries** with multiple **Headword** characters. The **Entry** published in KRM.tsv is shown in the form “建／建”. The “／” mark separates multiple **Headwords** when more than one is present.

Next, the original glyph forms are shown via GlyphWiki, followed by the **Main Text** and then the **Notes**, in that order. In the notes, the number assigned according to the order of appearance within the **Original Gloss** is given first, clearly identifying the specific passage being annotated.

5.8.2 *Butsujō*

5.8.2.1 3 建

5.8.2.1.1 K01062121 建／達

建建

(Main Text) 居彦(RV)反 タツ(LH) ヲヨフ サル イタル ヨロコフ コホス クツ
カヘル 和コン

(Notes)

1 居彦(RV)反

“建” appears in the *Guangyun* as “居万切” (Departing tone, Yuan rhyme (願韻), Jian initial; xiaoyun 建). “達” appears in the *Guangyun* as “餘律切” (Entering tone, Shu rhyme (術韻), Yu IV initial; xiaoyun 聿). “彦” is “魚變切” (Departing tone, Xian rhyme (線韻), Yi initial).

As for the **Tone Mark** on “彦”: the Kanchi-in manuscript marks it Departing, voiced; the Kōzan-ji manuscript marks it Departing, voiced (in the “-o” shape); the Sainenji manuscript marks it Departing; the Renjō-in manuscript has none.

2 タツ(LH)

The Kōzan-ji manuscript agrees; the Renjō-in and Sainenji manuscripts have no **Tone Mark**. The *Tenrei Banshō Meigi* gives “立也” (to stand) and “樹也” (to erect). Nakamura’s Monzen, p. 68 (西京), has “建タテテ” (“erecting”).

3 ヲヨフ

The Kōzan-ji manuscript has “オヨフ(HH_)”; the Renjō-in and Sainenji manuscripts have “オヨフ”.

4 サル

The Kōzan-ji manuscript has “サ爪(LH)”; the Sainenji manuscript has “サ爪”; the Renjō-in manuscript has “サス”. Nishihata, *Gosha Shorei* (Examples of Scribal Errors), p. 39, item ①, error no. 294. Nakamura’s Monzen, p. 1 (表), has “建サスコト”.

5 イタル

The *Tenrei Banshō Meigi* gives “至也” (to arrive).

6 ヨロコフ

The Kōzan-ji, Renjō-in, and Sainenji manuscripts all write “ヨ” as a **Variant Character** (*itaiji*).

7 コホス

The Kōzan-ji manuscript has “コ小爪(LLVH)”. The Sainenji manuscript also has “コ小爪(LLVH)” (the **Tone Mark** is uncertain, 存疑). The *Kunten Goi Shūsei* records the readings “イタル”, “コボス”, “サス”, and “タツ” for “建”.

8 クツカヘル

The Sainenji manuscript agrees; the Kōzan-ji and Renjō-in manuscripts lack this reading. The *Jiyun* gives “建擡 覆也漢書居高屋之上建瓴水或作擡” (Rising tone, Ruan rhyme (阮韻); xiaoyun 建: “紀偃切”). The *Crown Japanese-Chinese Dictionary*, under the idiom “高屋建瓴” (“gāo wū jiàn líng”), gives: “A set phrase (成語・成句): terrain from which one can look straight down from a high place; also a metaphor for a force whose momentum cannot be stopped. The phrase appears in the ‘Basic Annals of Gaozu’ (高祖本紀) of the *Shiji* (史記): the terrain is advantageous for launching troops, as though water were being poured from a jar atop a roof — it flows straight down without resistance.” “瓴” means a jar for holding water.

9 和コン

The Kanchi-in, Renjō-in, and Sainenji manuscripts have “禾コン”; the Kōzan-ji manuscript has “音コン”.

5.8.2.1.2 K01062140 𪛗

𪛗

𪛗

(Main Text) 丑連反 安行也 トコロ

(Notes)

1 丑連反

Not found in the *Guangyun* or the *Tenrei Banshō Meigi*. The Song edition of the *Yupian* gives “斯子切”; the *Longkan Shoujian/Shoujing* gives “丑連反”. In the original text, “刃” is a **Variant Character** of “丑”. The Kanchi-in, Renjō-in, and Sainenji manuscripts write “刃”;

the Kōzan-ji manuscript writes “丑”. For “連” (Level tone, Xian rhyme (仙韻)), the Kōzan-ji and Sainenji manuscripts have a Level **Tone Mark**.

2 安行也

The *Longkan Shoujian/Shoujing* gives “緩歩也” (to walk unhurriedly).

3 トコロ

Possibly a misreading arising from the graphically similar character “処”.

5.8.2.1.3 K01062210 辿

辿

辿

(Main Text) 俗

(Notes)

1 俗

The Kanchi-in, Kōzan-ji, and Renjō-in manuscripts write the **Headword** as “辿”, but the

辿

Sainenji manuscript alone writes it as “**辿**”. The *Longkan Shoujian/Shoujing* labels

“**辿**”

(**辿**)” with the **Form Classification Tag** “二同” (“the second is the same”).

5.8.2.1.4 Ta084220 延

延

延

(Main Text) 以然反 ノフ(LH) ヒク ヲヨフ シリソク ミチヒク ヒサシ チカツ
ク ホヒコル ス、ム アヒタ トヲシ ナカシ ヒロク(LV) 和エン

(Notes)

1 以然反

The *Guangyun* gives “以然切” (Level tone, Xian rhyme (仙韻)) and “于線切” (Departing

tone, Xian rhyme (線韻); xiaoyun 衍); this corresponds to the former. The *Tenrei Banshō Meigi* gives “餘旗反”; the Song edition of the *Yupian* gives “余旃切” (Level tone, Xian rhyme (仙韻)). In the Kōzan-ji manuscript, “然” carries the Level, voiced **Tone Mark** (in the “-o” shape); the other manuscripts have no **Tone Mark**.

2 ノフ (LH)

The Kōzan-ji manuscript has “ノフ (LHV)”; the Renjō-in and Sainenji manuscripts have “ノフ”. The *Tenrei Banshō Meigi* gives “陳也” (to lay out). The *Kunten Goi Shūsei* records the readings “オヨフ”, “スゴス”, “ススム”, “チカツク”, “ナガシ”, “ノバフ”, “ノブ”, “ヒク”, “ミチビク”, and “キル”.

3 ヒク

The Renjō-in and Sainenji manuscripts agree; the Kōzan-ji manuscript has “ヒク (HL)”. Nakamura’s Monzen, p. 60 (西京), has “重閨、幽闔アリテ、轉ウタ、相踰コエ延ヒケリ” (重閨 and 幽闔 are small doors within the palace).

4 ヲヨフ

The Renjō-in and Sainenji manuscripts have “オヨフ”; the Kōzan-ji manuscript has “オヨフ (HHLV)”. The *Tenrei Banshō Meigi* gives “及也” (to reach). Nakamura’s Monzen, p. 280 (羽), has “延オヨヒ”.

5 シリソク

The Renjō-in manuscript agrees; the Kōzan-ji manuscript has “シリソク (LL_)”; the Sainenji manuscript has “シリツク”. The *Tenrei Banshō Meigi* gives “退也” (to withdraw). Nakamura’s Monzen, p. 73 (西京), has “遷延(ト)シリソキ「退也」”; (上野) has “(ト)シリソキ「作延遷」”.

6 ミチヒク

The Renjō-in and Sainenji manuscripts agree; the Kōzan-ji manuscript has “ミチヒク (HH_)”. Nakamura’s Monzen, p. 234 (甘), has “延ミチヒク”.

7 ヒサシ

The Kōzan-ji, Renjō-in, and Sainenji manuscripts agree. The characters “廻” and “遠” both carry the reading “ヒサシ”; this reading may derive from their cursive forms.

8 チカツク

The Kōzan-ji, Renjō-in, and Sainenji manuscripts agree. This reading may arise because the **Variant Character** of “延”, “返”, has a form resembling “近”.

9 ホヒコル

The Sainenji manuscript agrees; the Kōzan-ji and Renjō-in manuscripts have “小ヒコル”. The *Nikkoku*, under “ほびこ・る【蔓延】”, gives the meaning “to spread everywhere; to run rampant,” citing examples from *Man'yōshū* poem 4123 (雲保妣許里) and the mid-Heian-period glosses on the Ishiyama-dera manuscript of the *Hokekyō Genzan* (法華經玄賛, on “蔓”).

10 ス、ム

The Renjō-in and Sainenji manuscripts agree; the Kōzan-ji manuscript has “爪、ム”. The *Tenrei Banshō Meigi* gives “進也” (to advance). Nakamura's Monzen, p. 443 (閑), has “延ス、メ”.

11 アヒタ

The Kōzan-ji, Renjō-in, and Sainenji manuscripts agree. The *Tenrei Banshō Meigi* gives “間也” (an interval).

12 トヲシ

The Kōzan-ji manuscript agrees; the Renjō-in and Sainenji manuscripts have “トホシ”. The *Guangyun* gives “遠也” (far).

13 ナカシ

The Renjō-in manuscript agrees; the Kōzan-ji manuscript has “ナカシ(LLVH)”. In the Sainenji manuscript, there is a mark “ー・ー” to the left of “ナカシ”, possibly a **Tone Mark**. The *Tenrei Banshō Meigi* gives “長也” (long). Nakamura's Monzen, p. 339 (魯), has “蔓延(ト)[ナカシ]” / (寛永 edition) “ハヒコレリ[ナカシ・ナカクノヘリ]”.

14 ヒロク(LV)

The Kōzan-ji manuscript has “ヒロク(HHLV)”; the Renjō-in and Sainenji manuscripts have “ヒロク”.

15 和エン

Absent from the Kōzan-ji manuscript. The Kanchi-in and Renjō-in manuscripts have “禾エ
ン”. The Sainenji manuscript has “禾エン(L)”.

5.8.2.1.5 **K01062310** 𪛗𪛘

延

𪛗𪛘

(Main Text) 或

(Notes)

1 或

The Kanchi-in and Kōzan-ji manuscripts agree; the Sainenji manuscript has “𪛗𪛘”.

5.8.2.1.6 **K01062321** 𪛗𪛙&CDP-8C66;延

返延

(Main Text) 俗

(Notes)

1 俗

“𪛗𪛙&CDP-8C66;” exists in Unicode (返 u2e785 返).

5.8.2.1.7 **K01062330** 𪛗𪛚𪛛𪛜ノ止

延

𪛗𪛚𪛛𪛜ノ止

(Main Text) ムシロ シキ物 ホヒコル

(Notes)

1 ムシロ

The Sainenji manuscript has “ムシロ”, and further has “音延” (Okada Mareo, *Ruiju*

Myōgishō no Kenkyū, p. 252). The Renjō-in and Sainenji manuscripts have “ムシロ”; the Kōzan-ji manuscript lacks it. Only the Sainenji manuscript has “音延” at the end of the note (Kusakawa, Noboru, “Ruiju Myōgishō Wakun Shōkō,” p. 44, example 29). “音延” is an addition in the Sainenji manuscript (Kobayashi Kyōji, “Kanchi-in-bon ni Nai Kanji Chūki (2),” example 32). Ikeda’s note: the **Headword** is the same in the Kanchi-in, Kōzan-ji, and Renjō-in manuscripts. The Sainenji manuscript writes it as “薤”. “薤” appears in the *Guangyun* as “草名” (name of a plant; Level tone, Xian rhyme (仙韻); xiaoyun 延: “以然切”) and as “蔓薤不斷” (Departing tone, Xian rhyme (線韻); xiaoyun 衍: “于線切”). The Sainenji manuscript’s **Phonetic Gloss** is “一延(L)”, with a Level **Tone Mark**.

2 シキ物

The original text has “シキ牛”. The Kōzan-ji and Renjō-in manuscripts have “シ\牛”; the Kanchi-in and Sainenji manuscripts have “シキ牛”.

3 ホヒコル

5.8.2.1.8 **K01062341** 蔓／薤

蔓薤

(Main Text) ハヒコル

(Notes)

1 ハヒコル

The Kōzan-ji and Sainenji manuscripts agree; the Renjō-in manuscript has “小ヒコル”.

Nakamura’s *Monzen*, p. 138 (蜀), has “風連薤蔓トハヒコレリ於蘭臯”.

5.8.2.1.9 **K01062411** 一 (薤)／胞

薤胞

(Main Text) 同

(Notes)

1 同

Nakamura’s *Monzen*, p. 264 (上), has “胞丘陵ハヒコリ「連也又延也」／(寛文 edition) ハヒコレリ・ソヒテ”.

5.8.2.1.10 K01062420 筵

筵

(Main Text) ナカムシロ

(Notes)

1 ナカムシロ

The Kanchi-in, Kōzan-ji, and Renjō-in manuscripts write the **Headword** as “竹筵”; the Sainenji manuscript writes it as “筵”. The *Nikkoku*, under “なが-むしろ【長筵】”, gives the meaning: “A long straw mat. A mat spread along the path when the Emperor walks on foot, or when a deity is conveyed in procession during a religious rite. Also, the surface covering of a tatami mat.” It cites examples from the *Engishiki* (“長席”), the *Shingishiki* (“長筵”), and the *Tsutsumi Chūnagon Monogatari*.

5.8.2.1.11 K01062430 延

延

(Main Text) 延並征字

(Notes)

1 延並征字

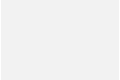

The Kanchi-in and Kōzan-ji manuscripts agree. The Renjō-in manuscript has the **Headword** “延延” with the **Original Gloss** “並征字”.

The “延” in the **Original Glosses** of the Kanchi-in and Sainenji manuscripts is the same as

. The Renjō-in manuscript writes this same **Headword** twice, side by side.

In the Sainenji manuscript, the **Headword** “延” differs from the Kanchi-in manuscript, but the **Original Gloss** “延並征字” matches the Kanchi-in manuscript. The Sainenji manuscript’s **Main Text** makes better sense. The Sainenji manuscript further records the

 **Headword** “延” (延 u28499 ) with the **Original Gloss** “一石”.

5.8.2.2 4 匚

5.8.2.2.1 K01062510 匚

匚

匚

(Main Text) 方音 受物之器 《玉一》云甫玉切

(Notes)

1 方音

The *Guangyun* gives “府良切” (Level tone, Yang rhyme (陽韻); xiaoyun 方). The Kanchi-in manuscript has a vermilion *iori-ten* mark (ㄣ) on the **Headword**; the Kōzan-ji, Renjō-in, and Sainenji manuscripts have no such mark. The Kōzan-ji manuscript has “第四匚篇” on the preceding line. The Kanchi-in manuscript has “四” in vermilion; the Renjō-in manuscript has a small “四” set to the right; the Sainenji manuscript has “四”. The Kanchi-in, Renjō-in, and Sainenji manuscripts have “方一”; the Kōzan-ji manuscript has “方(L)音”.

2 受物之器

The *Shuowen Jiezi* gives “受物之器” (a vessel for holding things).

3 《玉一》云甫玉切

The Kanchi-in manuscript has “《玉一》云甫玉切”; the Renjō-in, Kōzan-ji, and Sainenji manuscripts lack it. This is an addition in the Kanchi-in manuscript. The Song edition of the *Yupian* gives “甫王切”; “玉” is a scribal error for “王” (Kobayashi Kyōji, “Sainenji-bon ni Mienai Kanji Chūki” [Character-Form Annotations Not Visible in the Sainenji Manuscript], example 17).

5.8.2.2.2 K01062520 匱

匱

匱

(Main Text) 音上 吳音昌(R) 匱 匱一斤俗 ツヒニ 〈是歟〉 タクミ (LLL)

(Notes)

1 音上

The *Guangyun* gives “疾亮切” (Departing tone, Yang rhyme (漾韻)). “上” is “時掌切” (Rising tone, Yang rhyme (養韻)) and “時亮切” (Departing tone, Yang rhyme (漾韻); xiaoyun 尚). The Kanchi-in, Renjō-in, and Sainenji manuscripts have “一上”; the Kōzan-ji manuscript has “音上(R)”.

2 吳音昌(R)

The Kōzan-ji manuscript has “吳一唱(R)”; the Renjō-in and Sainenji manuscripts have “吳一唱”. In the Ishiyama-dera manuscript of the *Dai-Hannya-kyō Jishō*, the entry for “匠” (𨾏 匠 一斤) has “音唱” and “タクミ” (fol. 9r), and “音唱” (fol. 21r).

3 𨾏 匠 一斤俗

“𨾏 匠 一斤” is 匠 (U+2E786). The *Ganlu Zishu* gives “𨾏 匠 一斤 匠 上俗下正” (of the two, the upper is the vulgar/popular form and the lower is the standard form).

4 ツヒニ 〈是歟〉

The Kanchi-in manuscript writes “是歟” in a slightly smaller size. This reading may derive from the cursive form of “遂”, though this remains uncertain.

5 タクミ (LLL)

The Dōen-bon manuscript of the *Wamyō Ruijushō* gives “工匠 四声字苑云工 [功反和名 太久美] 匠 [上反] 巧人也” (Vol. 2, Jinrin [Human Relations] Section). The *Dai-Hannya-kyō Jishō* has “タクミ” for “匠” (fol. 9r). The Kanchi-in and Kōzan-ji manuscripts have “タクミ (LLL)”; the Renjō-in manuscript has “タクミ”; the Sainenji manuscript has “タクミ (LLL)” (uncertain, 存疑).

5.8.2.2.3 K01062530 匠

匠

匠

(Main Text) 苦俠(S)反 篋俗

(Notes)

1 苦俠(S)反

The *Guangyun* gives “苦協切” (Entering tone, Tie rhyme (怙韻); xiaoyun 愜). In the Kanchi-in and Kōzan-ji manuscripts, “俠” carries an Entering **Tone Mark**; the Renjō-in and Sainenji manuscripts have no **Tone Mark**.

2 篋俗

The Renjō-in manuscript writes “𠂔” in the same size as the **Headword**. The Song edition of the *Yupian* gives “𠂔 或作篋” (𠂔 is also written as 篋). The *Shinsen Jikyō* gives “𠂔 篋字” (𠂔 is the character 篋); the *Longkan Shoujian/Shoujing*, Fascicle 1, “匚” radical section, gives “匚 俗通；𠂔 正。苦叶反。函一也。二。”

5.8.2.2.4 **K01062540** 𠂔

𠂔

𠂔

(Main Text) 正

(Notes)

1 正

The Kanchi-in, Renjō-in, and Kōzan-ji manuscripts have “正”; the Sainenji manuscript lacks it. This is an omission in the Sainenji manuscript (Kobayashi Kyōji, “Sainenji-bon ni Mienai Kanji Chūki,” example 18).

5.8.2.2.5 **K01062610** 𠂔

𠂔

𠂔

(Main Text) 移(L)音 又戈(弋)余反 𠂔 𠂔 𠂔 𠂔 𠂔

(Notes)

1 移(L)音

The *Guangyun* gives “弋支切” (Level tone, Zhi rhyme (支韻), *Yu* IV initial; xiaoyun 移) and “移爾切” (Rising tone, Zhi rhyme (紙韻), *Yu* IV initial; xiaoyun 酖); this corresponds to the former. The Kanchi-in manuscript has “移(L)一”; the Kōzan-ji manuscript has “移(L)音”;

3 タ、ス-シ(LHVVH-)

Nakamura's *Monzen*, p. 8 (序), has “匡タ、スニ「正也」”.

4 マサシ

The *Kunten Goi Shūsei* records the readings “ウルハシ”, “タスク”, “タダシ”, “タダシウス”, “タダシクス”, and “タダス” for “匡”.

5 タクマシ

Possibly related to the reading of “逞”.

6 オツ

7 カシコマル

The *Kunten Goi Shūsei* records the reading “カシコマル” for “屈”; this may be related.

8 ス、メリ

9 マウス

10 スケ

Masamune's Index records this as two separate readings, “スケ” and “ヤム”. Nishihata Yukio reads it as “スチヤム”, taking the *Kōzan-ji* manuscript as “スケ ヤム” and the *Renjō-in* manuscript as “カケヤム” (Nishihata, *Gosha Shorei*, p. 39, item ①, error no. 313). Here, Masamune's reading is followed.

11 ヤム

12 呉音況

In the Ishiyama-dera manuscript of the *Dai-Hannya-kyō Jishō*, the entry for “匡” (匡 一王) has “音況” and “タ、ス” (fol. 25r).

5.8.2.2.8 K01062711 匡／匡主

匡 匡

(Main Text) 二正 筐或

(Notes)

1 二正

2 筐或

5.8.2.2.9 **K01062720** 𠃵𠃵王

𠃵

𠃵𠃵王

(Main Text) (無)

(Notes)

1 (無)

An omitted stroke, in observance of the naming taboo (避諱) for Zhao Kuangyin (趙匡胤), Emperor Taizu of the Song dynasty (缺筆).

5.8.2.2.10 **K01062731** 高／𠃵

高𠃵

(Main Text) マカフラタカ(LHHVHHH)

(Notes)

1 マカフラタカ(LHHVHHH)

The *Nikkoku*, under “まかぶら-だか【𠃵高】”, gives the meaning “having a high *makabura*; the area around the eyebrows being raised,” citing the *Kōzan-ji* manuscript’s “マカブラダカ” and an example from the *Hōgen Monogatari*. Likewise, the *Nikkoku*, under “こう-きょう【高𠃵】” (“𠃵” meaning the rim of the eye), explains “the eyes being sunken, with the surrounding area being bony,” citing an example from the *Sangō Shiiki* (三教指帰), Part 3: “折頰。高𠃵。頤。隅目。嚙口。無鬚。似孔雀貝”.

5.8.2.2.11 **K01062740** 𠃵

𠃵

𠃵

(Main Text) 蘇管(H)反 竹莒

(Notes)

1 蘇管(H)反

The *Guangyun* gives “蘇管切” (Rising tone, Huan rhyme (緩韻); xiaoyun 算).

2 竹莒

The *Shuowen Jiezi* gives “淥米藪也” (a basket for draining rice). The *Tenrei Banshō Meigi* gives “盬也、米藪也” (a drainer; a basket for rice). The Song edition of the *Yupian* gives “淥米藪” (a basket for draining rice). The *Guangyun* gives “器也冠箱也” (a vessel; a box for a cap).

5.8.2.2.12 K01062810 𪛗

𪛗

𪛗

(Main Text) 全音 炊簋

(Notes)

1 全音

The original text has “𪛗 八毛音”. The *Guangyun* gives “似宣切” (Level tone, Xian rhyme (仙韻), Xie initial; xiaoyun 旋). “全” is “疾緣切” (Level tone, Xian rhyme (仙韻), Cong initial).

2 炊簋

The *Tenrei Banshō Meigi* gives “𪛗 似治反。漉米。簋。上文。”. The *Shuowen Jiezi*, under “藪”, gives “炊簋也”, meaning a bamboo strainer used for cooking.

5.8.2.2.13 K01062820 𪛗

𪛗

𪛗

(Main Text) 櫝 𪛗 𪛗 𪛗 𪛗 二或 真音 小栢

(Notes)

1 檣簀二或

“檣” appears in the *Guangyun* as “格木説文同上” (the preceding item is 𣎵) (Departing tone, Song rhyme (送韻); xiaoyun 貢: “古送切”). “簀” is “都感切” (Rising tone, Gan rhyme (感韻); xiaoyun 黠).

2 真音

The *Guangyun* gives “古禪切” (Rising tone, Gan rhyme (感韻); xiaoyun 感) and “古送切” (Departing tone, Song rhyme (送韻); xiaoyun 貢). The Kanchi-in manuscript’s “真音” is a scribal error for “貢音”.

3 小栴

The *Shuowen Jiezi* gives “小栴也” (栴 is the same as 杯). The *Guangyun* gives “小杯名” (Departing tone, Song rhyme (送韻); xiaoyun 貢). The *Tenrei Banshō Meigi* gives “小盃也”. The meaning is a small cup.

5.8.2.2.14 K01062830 匪

匪

匪

(Main Text) 甫尾反 アラス マフ スケ ナカシ ナシ カノ ユルナリ ナイカシ
ロ ワカツ 和ヒ 呉彼

(Notes)

1 甫尾反

The *Guangyun* gives “府尾切” (Rising tone, Wei rhyme (尾韻)).

2 アラス

The *Tenrei Banshō Meigi* gives “非也” (not); the *Dai-Hannya-kyō Jishō* gives “不也” (not).

3 マフ

Masamune’s Index, under “マフ”, notes: “Also in the Kōzan-ji and Sainenji manuscripts as マコト; also found in the *Jikyōshū*.” A detailed discussion appears in Kusakawa, Noboru, “Ruiju Myōgishō Wakun Shōkō,” p. 45, example 30.

4 スケ

“ケ” is written in a form resembling “チ”. Masamune’s Index records this as “スケナカシ”. Kusakawa’s Wakun Collection records it as separate readings “スケ” and “ナカレ”, noting that “ナカレ” is blank in the Kanchi-in manuscript but present in the Renjō-in, Kōzan-ji, and Sainenji manuscripts. Kusakawa Noboru argues that treating “スケナカシ” as a single reading is unnatural, and that it should likely be read not as “スケ” + “ナカシ” but as an error for “ナカレ” (Kusakawa, Noboru, “Ruiju Myōgishō Wakun Shōkō,” p. 45, example 30). Shirakawa’s *Jitsū* records it as “スデナガシ”. Nakamura’s Monzen, p. 46 (東都), has “匪ス”. Kobayashi Kyōji, “Kanchi-in-bon ni Nai Katakana Chūki (6),” examples 54 and 55, organizes the readings as follows: the Kanchi-in manuscript has “スチナカシ”; the Sainenji manuscript has “爪ケ ナカレ タケ、ツワオ”; the Kōzan-ji manuscript has “スケ ナカレ タケ\ツハモノ”; the Renjō-in manuscript has “ナカレ (ナ written small) タケ\ツハモノ (with 牛 to the right)”; and among the various interpretations, Tōdō reads it “スチナカシ”, Masamune reads it “スケナカシ”, Nagashima reads it as separate “スケ” and “ナカシ”, and Kusakawa reads it as separate “スケ” and “ナカレ”. It is conjectured that this may originally have been “スケナカレ”, the inflected form of the adjective 素気無 (すげな) し (“curt, indifferent”). “タケ\ツハモノ” is an omission in the Kanchi-in manuscript.

5 ナカシ

“ケ” is written in a form resembling “チ”. Masamune’s Index records this as “スケナカシ”. Kusakawa’s Wakun Collection records it as separate readings “スケ” and “ナカレ”, noting that “ナカレ” is blank in the Kanchi-in manuscript but present in the Renjō-in, Kōzan-ji, and Sainenji manuscripts. Shirakawa’s *Jitsū* records it as “スデナガシ”.

6 ナシ

The Sainenji manuscript has a reading “タケキツハ物”, not found in the Kōzan-ji or Kanchi-in manuscripts (Okada Mareo, *Ruiju Myōgishō no Kenkyū*, pp. 249, 195). Kusakawa’s Wakun Collection records it as “ナシ”. Ikeda’s note: the Sainenji manuscript has “タケキツハ物ナシ”; the Renjō-in manuscript has “タケキツハ物ナシ” (with “モノ” struck through and corrected to “牛”); the Kōzan-ji manuscript has “タケキツハモノナシ”.

7 カノ

Masamune's Index, Supplement and Corrections, gives “セノか”, noting: “‘セ’ is obscured by worm damage and unclear.” Kusakawa's Wakun Collection records this as “カノ”, and the Renjō-in, Kōzan-ji, and Sainenji manuscripts likewise have “カノ”. Shirakawa's *Jitsū* notes that it is “used interchangeably with 彼 as a demonstrative,” giving the meanings “かの” and “かれ”. The *Tenrei Banshō Meigi* gives “彼也” (that).

8 ヌルナリ

9 ナイカシロ

10 ワカツ

The original text has “禾カツ”. The *Tenrei Banshō Meigi* gives “分也” (to divide).

11 和ヒ

The Kōzan-ji manuscript has “音ヒ (R)” (which may also appear as H).

12 呉彼

In the Ishiyama-dera manuscript of the *Dai-Hannya-kyō Jishō*, the entry for “匪” has “音彼” and “不也” (fol. 17v).

6 Typesetting Configuration for Transcriptions and Annotations

6.1 Introduction

This chapter is Supporting Documentation. It provides workflow documentation for typesetting KRM transcriptions and annotations; it is not part of the normative data specification.

This document outlines methods for typesetting transcriptions and annotations of old dictionaries using an environment comprising LuaTeX, Hanazono Mincho fonts, GlyphWiki, and the `sfkanbun.sty` package.

It is recommended to use LuaTeX via TeX Live and VS Code as the editor. Instructions for installing and using TeX Live and VS Code are widely available on the web and will be omitted here.

6.2 Typesetting Transcriptions and Annotations

The transcriptions and annotations that have been created can be displayed and searched on the web.

Separately from this, we will consider methods for typesetting the web content into a more readable, book-like format.

Since the web content is written in Markdown, this can be addressed by converting it to an appropriate format.

This section serves as a memorandum on a method using LuaLaTeX.

6.3 Requirements for Typesetting Software

Old dictionaries and *kunten* materials (訓点資料, documents annotated with guiding marks for reading Chinese texts in Japanese) often contain many complex **Hanzi (Chinese characters)**, and their texts, including features like **Interlinear Notes** (割注, *warichū*) and side-line *kun* readings (傍訓, *bōkun*), can be intricate.

For displaying and printing rare or complex characters, it is essential to be able to easily use the following two resources:

1. Hanazono Mincho (花園明朝) fonts
2. GlyphWiki

To utilize both of these resources, LuaLaTeX appears to be a suitable choice. While upLaTeX might also be usable, configuring it to work with these resources seems likely to be a challenging endeavor.

For complex typesetting features such as **Interlinear Notes** and side-line *kun* readings, macro files can be used. Several such files have been publicly released:

1. `kunten2e.sty`: A style file for *kunten* materials.
2. `sfkanbun.sty`: The `sfkanbun` package (for Kanbun texts).

Both of these can be used with upLaTeX. However, they cannot be used directly with LuaLaTeX as is. After some investigation, it was found that `sfkanbun.sty` can be made compatible with LuaLaTeX by modifying its files slightly. The necessary modifications are minimal.

It has been over 20 years since I last created document files using LaTeX. At that time, I utilized the following combination:

1. `kunten2e.sty`: The style file for *kunten* materials.
2. `mojikyo.sty`: For using Mojikyo fonts.

It would be convenient if LaTeX document files written with these two could be made usable with only minor revisions. In other words, easy reuse of older LaTeX document files is preferable.

Migrating from `kunten2e.sty` to `sfkanbun.sty` appears to be relatively straightforward.

While `mojikyo.sty` was useful when Unicode **Hanzi (Chinese characters)** could not be freely used, it is no longer necessary now that Unicode **Hanzi (Chinese characters)** can be input and processed directly.

The approach would be to enable the use of Hanazono Mincho fonts and then utilize `bxglyphwiki.sty`, which is compatible with LuaLaTeX, for GlyphWiki integration.

- [Setting up GlyphWiki](#)
- [Setting up sfkanbun.sty](#)
- [A Memorandum on LuaTeX Typesetting for Old Dictionaries and Kuten Materials](#)
- [Online Tools](#)

6.4 Setting up Hanazono Mincho

6.4.1 Prerequisites

Ensure that [TeX Live](#) is set up and ready to use.

6.4.2 Hanazono Fonts

Install the [Hanazono Mincho fonts](#) on your computer.

6.4.3 Browser Confirmation

For example, open [a page from the ctext.org Dictionary \(e.g., radicals section\)](#) in the Chrome browser. Confirm that the list of **Hanzi (Chinese characters)** is displayed correctly.

6.4.4 Installing Hanazono Fonts in TeX Live

To add fonts to TeX Live, place them in the `fonts` directory located under the `texmf-local` directory. Within the `fonts` directory, there should be an `opentype` subdirectory; placing the font files there should suffice. The exact location of the `fonts` directory may vary depending on your system configuration.

In my specific environment—TeX Live installed on Ubuntu via WSL (Windows Subsystem for Linux) on Windows 11—I placed `HanaMinA.ttf` and `HanaMinB.ttf` into the following directory:

```
/usr/local/texlive/texmf-local/fonts/opentype/hanazono
```

6.4.5 LuaLaTeX Sample File

Save the following content as a file named, for example, `sample1.tex`, and then generate a PDF file using LuaLaTeX:

```
$ lualatex sample1.tex
```

Although the text is short, compilation may take a little while. It might be around a minute or so, but it is not generated instantaneously.

```
\documentclass{jlrq}
\usepackage{luatexja-fontspec}
% A setting where: HanaMinA is used for BMP (Basic Multilingual Plane)
% characters and HanaMinB is used for SIP (Supplementary Ideographic Plane)
% characters; however, these are to be replaced by IPAexMincho if possible.
\setmainfont[AltFont={
  {Range="20000-"2FFFF, Font=HanaMinB},
  {Range="0080-"FFFF, Font=IPAexMincho},
}]{HanaMinA}
% Hanazono Mincho AFDKO version 2017-06-20
\begin{document}
```

This data is from ctext.org.

It is the entry for '三' from the *Kangxi Dictionary* (康熙字典), section '一部' (the first radical section, *ichibu*).

Please confirm whether the first character of '𠂇與三同' is displayed correctly.

Kangxi: 《康熙字典·一部·二》三：〔古文〕𠂇《唐韻》《集韻》《韻會》蘇甘切《正

韻》蘇監切，𠂔颯平聲。《說文》三，天地人之道也。謂以陽之一合陰之二，次第重之，其數三也。《老子·道德經》一生二，二生三，三生萬物。《史記·律書》數始於一，終於十，成於三。又《周禮·冬官考工記》凡兵無過三其身。又《左傳·昭七年》士文伯曰：政不可不慎，務三而已。一擇人，二因民，三從時。又《晉語》民生於三，事之如一。又《周語》人三爲衆，女三爲粲，獸三爲羣。又姓。明三成志。又漢複姓。屈原之後有三閭氏，三飯奈之後有三飯氏，三州孝子之後有三州氏。又去聲。《韻會》蘇暫切。《論語》三思而後行。又本作參。《博雅》參，三也。《周禮·冬官考工記》參分其股圍。《前漢·刑法志》秦造參夷之誅。𠂔與三同。又《韻補》叶疏簪切，音森。《詩·召南》標有梅，其實三兮。下叶今。叁。\\

The following is a list from the '一部' section, ordered by radical and then by stroke count.

[illegible]

If this sample file is processed successfully, you can then modify and adapt it as needed.

6.5 Setting up GlyphWiki

6.5.1 The BXglyphwiki Package Bundle

To use Hanazono fonts with LuaLaTeX, refer to the [BXglyphwiki package bundle](#).

A [template file](#) by toyjack is also available.

6.5.2 Sample File for Using bxglyphwiki with LuaLaTeX

The following is a sample file that demonstrates the use of user-created characters (作字, *sakuji*) from GlyphWiki in addition to Hanazono fonts.

```
\documentclass{jlrreq}
\usepackage{luatexja-fontspec}
% A setting where: HanaMinA is used for BMP (Basic Multilingual Plane)
% characters and HanaMinB is used for SIP (Supplementary Ideographic Plane)
% characters; however, these are to be replaced by IPAexMincho if possible.
\setmainfont[AltFont={
  {Range="20000-"2FFFF, Font=HanaMinB},
  {Range="0080-"FFFF, Font=IPAexMincho},
}]{HanaMinA}
% Hanazono Mincho AFDKO version 2017-06-20

% Below are the GlyphWiki settings.
\usepackage[luatex]{graphicx}

% Use Chinese character forms registered on GlyphWiki in LuaLatex.
% \GWI{zihai-021005}
% Place bxglyphwiki.lua in the same folder as the tex source file.
\usepackage[luatex]{bxglyphwiki}

\begin{document}

Here's an example of "壽 (u58fd)" from GlyphWiki.

(u58fd-g) (=zihai-024114) is displayed as \GWI{u58fd-g},
(u58fd-itaiji-009) is displayed as \GWI{u58fd-itaiji-009},
(u58fd-itaiji-010) is displayed as \GWI{u58fd-itaiji-010}.

\end{document}
```

If it works fine, then edit this sample file as needed.

6.5.3 Notes

`gb4e.sty` is commonly used to present numbered linguistic examples. It is used together with `cgloss4e.sty`, which is distributed alongside it. However, it is incompatible with `bxglyphwiki.sty`.

Instead of using `gb4e.sty`, numbered examples are presented using the `enumerate` environment. An example is given below.

```
\begin{enumerate}
  \setcounter{enumi}{5}
  \item \label{ex:02-6}
    \begin{enumerate}
      \item 滂滂 （省略） 沱 類云正（図書寮本、水部、8 頁、『類音決』を引用）
    \label{ex:02-6a}
      \item 潜潜 干云上谷下正（図書寮本、水部、13 頁、「干」は『干禄字書』の略称、
        「谷」は「俗」の略字） \label{ex:02-6b}
    \end{enumerate}
  \end{enumerate}
```

With this approach, the numbering can correspond as (6), (6a), (6b).

6.6 Setting up `sfkanbun.sty`

The style file for *kunten* materials, `kunten2e.sty`, can be used with upLaTeX but is not compatible with LuaLaTeX. Some existing document files were created using this `kunten2e.sty` style file.

The `sfkanbun` package (`sfkanbun.sty` for Kanbun texts) originates from the work on [Typesetting Kanbun with Kundoku Marks \(漢文の訓点文の組版\)](#), featured in [“Introduction to Vertical and Horizontal Document Composition” \(入門・縦横文書術\)](#) by [Fujita Shinsaku](#). A modified version of this style file, adapted for LuaLaTeX compatibility and renamed `sfkanbun-lua.sty`, has been made available at <https://github.com/shikeda/rose>.

Therefore, to minimize changes to existing TeX source files, frequently used macros in `kunten2e.sty` have been mapped to macros in `sfkanbun.sty` that provide equivalent functionality, or compatibility has been otherwise ensured.

6.6.1 Sōgyō (双行 - Double-Line Annotations)

Sōgyō (双行) refers to a type of **Interlinear Note** (割注, *warichū*), specifically one that is typically presented in two lines.

In `kunten2e.sty`, this is input as follows:

```
\sougyou{right-hand line}{left-hand line}
```

(In vertical text, the “right-hand line” is typically the first line of the two-line note, and the “left-hand line” is the second.)

In `sfkanbun.sty`, the `\tagyobox` command (for multi-line interlinear notes) is used:

```
\tagyobox{item 1 \ \ item 2 \ \ ...}
```

Since an **Interlinear Note** (*warichū*) often consists of just two lines (corresponding to “item 1” and “item 2” above), the following custom LaTeX command can be defined to simplify input for such cases:

```
\newcommand{\sougyou}[2]{\tagyobox{#1 \ \ #2}}
```

6.6.2 Nested Double-Line Annotations (副双行, *Fukusōgyō*)

A *fukusōgyō* (副双行) refers to creating an additional double-line annotation (*sōgyō*) within an existing *sōgyō* (double-line interlinear note). In `kunten2e.sty`, this is input as follows:

```
\hukusougyou{right-hand line}{left-hand line}
```

This functionality can be achieved in `sfkanbun.sty` using its feature for nested multi-line interlinear notes (`\fukutagyobox`).

```
\fukutagyobox{item 1 \ \ item 2 \ \ ...}
```

Since a nested double-line annotation typically requires only two items (lines), the following custom LaTeX command can be defined to simplify input for such cases:

```
\newcommand{\hukusougyou}[2]{\fukutagyobox{#1 \ \ #2}}
```

6.6.3 Okurigana and Kaeriten Marks (送り仮名、返り点)

The `\kundoku` command from `sfkanbun.sty` is useful for typesetting *okurigana* (送り仮名, inflectional kana endings) and *kaeriten* (返り点, guiding marks for Japanese reading order of Kanbun). Its syntax is:

```
\kundoku[control_options]{base_character}{ruby_text}{okurigana}{kaeriten_
mark}[shoulder_kaeriten_mark](punctuation_mark)
```

The `(punctuation_mark)` argument is optional.

6.6.4 Ruby (ルビ)

Several macros are available for using ruby (ルビ, small phonetic glosses alongside characters). After experimentation, we decided to use `luatexja-ruby.sty`.

The basic syntax is: `~tex~`

In this example, the command specifies that the ruby text ‘おや’ (*oya*) is to be applied to the base character ‘親’; ‘も’ (*mo*) to ‘文’; and ‘じ’ (*ji*) to ‘字’.

An alias `\ruby` is also defined for this command.

Although the exact circumstances are no longer recalled, ruby was previously applied using a custom command named `\ukun`. To avoid rewriting original files that used this command, `\ukun` has been (re)defined as follows:

```
\newcommand{\ukun}[2]{\ltjruby{#1}{#2}}
```

Alternatively, all instances of `\ukun` could be globally replaced with `\ruby`.

6.7 A Memorandum on LuaTeX Typesetting for Old Dictionaries and Kuntēn Materials

This page is a detailed workflow memorandum within the Supporting Documentation. For the typesetting environment overview, see [Typesetting Configuration for Transcriptions and Annotations](#).

This document is a memorandum detailing the setup methods for typesetting transcriptions and annotations of old dictionaries and *kuntēn* materials. It focuses on using a LuaTeX environment (with TeX Live and VS Code recommended), along with Hanazono Mincho fonts, GlyphWiki, and either `sfkanbun.sty` or a LuaLaTeX-compatible version of `kuntēn2e.sty`.

First, it introduces the **key aspects of setting up the LuaLaTeX environment in VS Code** (utilizing `latexmk` and the LaTeX Workshop extension) and provides numerous online references for Japanese typesetting.

Next, it elaborates on **typesetting configuration using the `jlreq` document class**.

Referencing the style of the journal *Kuntēn-go to Kuntēn-shiryō* (訓点語と訓点資料), this part explains basic page layout settings (such as A4 vertical two-column format, margins, and font sizes), custom layouts for article titles and author names, methods for displaying endnotes, and procedures for creating a Japanese bibliography (sortable by *gojūon* order) using `natbib.sty`.

Finally, under **specific methods for creating the transcribed main text**, it presents font settings for Hanazono Mincho and IPAexMincho using `luatexja-fontspec`, and instructions for configuring the use of GlyphWiki with `bxglyphwiki.sty`. Furthermore, it demonstrates the usage of `sfkanbun-lua.sty` (a version of Fujita Shinsaku’s `sfkanbun.sty` adapted for LuaLaTeX), command redefinitions to maintain compatibility with `kuntēn2e.sty` macros (such as `\sougyou` and `\hukusougyou`), and provides examples and typesetting results for the `\kundoku` command. It also addresses modifications needed to use legacy `kuntēn2e.sty` files with LuaLaTeX.

6.7.1 Key Aspects of the LuaLaTeX Environment Setup

VS Code (Visual Studio Code) is a free, full-featured code editor provided by Microsoft, supporting a wide range of languages and extensions. It runs on Windows, macOS, and Linux.

There are two key points.

1. Configuring `.latexmkrc` to use `latexmk`.
2. Configuring the VS Code plugin (LaTeX Workshop) and `settings.json`.

There used to be an article titled “vscode で lualatex” (“LuaLaTeX in VS Code”) on toyjack’s blog, but the link is now broken, so my own configuration is pasted below.

First, here are the contents of `.latexmkrc`.

```
#!/usr/bin/env perl

@default_files = ('main.tex');
$aux_dir       = "build/";
$out_dir       = "build/";

# $lualatex = 'lualatex -shell-escape -synctex=1 -
interaction=nonstopmode %0 %S';
$lualatex = 'lualatex -shell-escape -synctex=1 -interaction=nonstopmode';
$pdflualatex = $lualatex;
$biber = 'biber %0 --bblencoding=utf8 -u -U --output_safechars %B';
$bibtex = 'upbibtex %0 %B';
$pdf_mode = 4;

$max_repeat = 1;

# uplatex settings
# $latex = 'uplatex %0 -shell-escape -kanji=utf8 -no-guess-input-enc -
synctex=1 -interaction=nonstopmode %S';
# $pdflatex = 'pdflatex %0 -synctex=1 -interaction=nonstopmode %S';
# $lualatex = 'lualatex %0 -synctex=1 -interaction=nonstopmode %S';
# $xelatex = 'xelatex %0 -synctex=1 -interaction=nonstopmode %S';
# $biber = 'biber %0 --bblencoding=utf8 -u -U --output_safechars %B';
# $bibtex = 'upbibtex %0 %B';
# $makeindex = 'upmendex %0 -o %D %S';
# $dvi pdf = 'dvi pdfmx %0 -o %D %S';
# $dvips = 'dvips %0 -z -f %S | convbkmk -u > %D';
# $ps2pdf = 'ps2pdf.exe %0 %S %D';
# $pdf_mode = 3;
```

`$max_repeat` specifies the maximum number of times to compile; here it is set to 1.

Explanations of the other options are omitted.

The contents of `settings.json` are as follows.

```
{
  //    "editor.fontSize": 18,
  //    "terminal.integrated.shell.windows":
"C:\\Windows\\System32\\cmd.exe",

6.7.2 Typesetting Configuration Using the `jlreq` Document Class

For the style file of *Kuntengo to Kunten Shiryō*, the journal of the Kuntengo Gakkai (Society for Kunten Language Studies), the style file for *Kuntengo to Kunten Shiryō* (`kunj2e11.sty`) formerly published on “Kinsui Satoshi’s TeX Page” is a useful reference. Its specifications are as follows.

1. Page layout (basic page format)
2. Article title and author name settings (`\title`, `\author`, `\maketitle`)
3. Note number display (`\chuu`)
4. End-of-article note list format (`chuulist` environment)
5. Legend/prefatory-notes list format (`hanrei` environment)
6. Bibliography list format (`shomeilist` environment)
7. Parenthetical annotations (displayed in reduced point size; `\skakko`)

However, it cannot be used as-is with LuaLaTeX. This section attempts to achieve the same effects.

Kuntengo to Kunten Shiryō is set in B5 format, two columns, vertical writing. Authors print their manuscript on A4 paper, paste it onto a designated mounting sheet, and submit it; it is then printed reduced to B5 size. Below is a memorandum on the settings for using `jlreq` with LuaLaTeX to achieve this.

The [jlreq](#) documentation is easy to understand.

6.7.2.1 Page Layout (Basic Page Format)

First, the basic page layout is configured via `documentclass`.

This is based on the specifications of the *Kuntengo to Kunten Shiryō* style file (`kunj2e11.sty`) and the specifications of the *Kenkyū Hōkoku Ronshū* (Research Report Collection) of the Kōzan-ji Tenseki Monjo Sōgō Chōsadan (Comprehensive Survey Group for Kōzan-ji Books and Documents).

The latter's specifications are as follows.

- A4 format; margins of 24mm on the top, bottom, left, and right edges.
- Title and author name span the full width (single column), occupying 5 lines; title at 18pt, author name at 14pt.
- Main text is normally two columns of 25 lines each, 30 characters per line (11pt), with a 14mm gap between columns.

The actual configuration.

```
\documentclass[
  lualatex,           % lualatex を使う
  report,             % デフォルトは横書きの article 相当
                      % report、book、ltjarticle もある。
                      % 縦書き論文は tate を指定するだけでもよい。
  tate,               % 縦書き、デフォルトは横書き
  oneseide,           % 奇数/偶数ページを同じレイアウト、article と
  report でのデフォルト
  %twoside,           % 奇数/偶数ページを異なるレイアウト、book でのデ
  フォルト
  notitlepage,        % 標題・概要のページの設定、book は titlepage がデ
  フォルト、それ以外は notitlepage
  twocolumn,          % 二段組、onecolumn がデフォルト
  paper=a4,           % 用紙サイズ
  fontsize=11pt, jafontsize=11pt, % フォントサイズ、pt での設定
  %fontsize=13Q, jafontsize=13Q, % フォントサイズ、Q での設定
  line_length=30zw,   % 一行の文字数 (zw=全角一文字の幅)
  number_of_lines=25, % 行数
  gutter=24mm,        % ノド側の余白
  column_gap=14mm,    % 段と段の空白
  head_space=24mm,    % 天の余白 (天/地どちらか一方を指定)
  %foot_space=24mm,   % 地の余白
```

```

baselineskip=1.7zw,          % 行送り、デフォルトは jafontsize の 1.7 倍
headfoot_verticalposition=1.5zw, % ノンブルと本文の間の空白
hanging_punctuation]        % ぶら下げ、組み方
{jlreq}

```

6.7.2.2 Article Title and Author Name Settings

The article title and author name span the full width (single column) and occupy 5 lines, with the title at 18pt and the author name at 14pt.

The font sizes and the commands for changing font size are as follows.

Command	10pt	11pt	12pt
	5	6	6
	7	8	8
	8	9	10
	9	10	11
	10	11	12
	12	12	14
	14	14	17
	17	17	20
	20	20	25
	25	25	25

`\normalsize` is the default.

Following the specifications of the Kōzan-ji Tenseki Monjo Sōgō Chōsadan's *Kenkyū Hōkoku Ronshū*, with body text at 11pt, an article title of 18pt is close to either `\LARGE` (17pt) or `\huge` (20pt). An author name of 14pt matches `\Large`.

Following the specifications of the *Kuntengo to Kuntan Shiryō* style file (`kunj2e11.sty`), with body text at 11pt, the article title becomes 20pt with `\Huge`, and the author name becomes 17pt with `\LARGE`.

For now, as a setting close to `kunj2e11.sty`, the following was tried.

```

\makeatletter
\def\@maketitle{
  \vspace{1.5\zw}
  \begin{flushleft}
    {\huge \@title \par}
    \vspace{0.5em}
  \end{flushleft}

```

```

\begin{flushright}
  {\Large \@author }
\end{flushright}
\par
\vspace{2\zw}
}

```

6.7.2.3 Note Number Display

`jlreq` provides several note formats.

- Footnote `\footnote` (rendered as a side note in vertical writing)
- Side note `\sidenote` (rendered as a footnote in vertical writing)
- Endnote `\endnote` (the note text itself is output immediately before the heading)

By default, endnotes from `\endnote` are output at the end of the `\section`.

This can be controlled by passing `endnote_position` to `\jlreqsetup`.

```

\jlreqsetup{
  endnote_position={_chapter,_section}
}

```

Notes are output in the format (1).

Setting `endnote_position={_chapter,_section}` outputs them immediately before `\chapter` and `\section`.

To place the list of notes between the main text and the bibliography, specify the insertion point with `\theendnotes` (no `endnote_position` setting is needed).

6.7.2.4 Bibliography List Format

Of the *Kuntengo to Kuntan Shiryō* style file (`kunj2e11.sty`) specifications, the following three remain.

- Legend/prefatory-notes list format (`hanrei` environment)
- Bibliography list format (`shomeilist` environment)
- Parenthetical annotations (displayed in reduced point size; `\skakko`)

The legend/prefatory-notes list format is handled by configuring the `enumerate` or `list` environment.

Parenthetical annotations displayed in a reduced point size are deferred for now, since there is also a method that does not reduce the point size.

The bibliography list format and parenthetical annotations can be handled with BibTeX.

The following is written in the preamble to load `natbib.sty`.

```

% bibtex で参考文献を作成する場合に必要
\usepackage{natbib}

```

The bibliography heading at the end of the article may be displayed as “Bibliography.” In that case, it can be explicitly specified as follows. Since the `report` document class is being used, `bibname` is specified.

```
% bibtex で参考文献を作成する場合に必要
\usepackage{natbib}
%\renewcommand{\refname}{参考文献} % 論文型クラスの場合
\renewcommand{\bibname}{\Large 参考文献} % 書籍/報告書型クラスの場合
```

If the font size is not to your liking, change it as needed. Here it was set to `\Large`.

Near the end of the document (before `\end{document}`), specify the bibliography style file to use and the bib file for the list of references.

```
\bibliographystyle{tate} % 論文のスタイル・ファイル
\bibliography{tate} % 使用する bib ファイル
```

`\bibliographystyle` takes a file with a `.bst` extension, and `\bibliography` takes a file with a `.bib` extension.

There are many `.bst` files for English-language references, but not many for Japanese. Here, `jecon.bst` is used. `jecon.bst` is a BibTeX style file for economics; it is customized for use here. The file name can be anything; here it was named `tate.bst`.

The `.bib` file is in the following format.

```
@article{池田証寿 1995 図書寮本類聚名義抄と類音決,
author = {池田, 証寿},
title = {図書寮本類聚名義抄と類音決},
journal = {訓点語と訓点資料},
publisher = {訓点語学会},
year = {1995},
volume = {96},
number = {},
pages = {26--37},
Yomi = {いけだしょうじゅ},
}
@incollection{池田証寿 2020 高山寺の古辞書音義,
author = {池田, 証寿},
booktitle = {高山寺経蔵の形成と伝承},
editor = {高山寺典籍文書綜合調査団},
isbn = {9784762936463},
pages = {79--98},
publisher = {東京 : 汲古書院},
title = {高山寺の古辞書音義},
year = {2020},
Yomi = {いけだしょうじゅ},
}
```

`jecon.bst` has a `yomi` field, which can be used as a key to sort entries in Japanese *gojūon* order.

6.7.2.5 Order of Notes and Bibliography

In humanities papers, it is common for the “Notes” to follow the main text, with the “Bibliography” list given last.

To place the list of notes between the main text and the bibliography, specify the insertion point with `\theendnotes` (no `endnote_position` setting is needed).

Headings such as “（注）” or “〈注〉” are added as appropriate, and line spacing is also adjusted with `\vspace{}`.

6.7.3 Specific Methods for Creating the Transcribed Main Text

6.7.3.1 Hanazono Mincho and GlyphWiki

Configuration to enable the use of Hanazono Mincho.

```
\usepackage{luatexja-fontspec}
% BMP は HanaMinA, SIP は HanaMinB, ただし可能なら IPAexMincho
% で置き換える, という設定
\setmainfont[AltFont={
  {Range="20000-"2FFFF, Font=HanaMinB},
  {Range="0080-"FFFF, Font=IPAexMincho},
}]{HanaMinA}
% 花園明朝 AFDKO 版 2017-06-20
```

Configuration to enable the use of GlyphWiki.

```
% グリフウィキを使うのにも必要
\usepackage[luatex]{graphicx}

% グリフウィキで登録された漢字字形を利用, luatex で使用
% tex ソース・ファイルと同じフォルダに bxglyphwiki.lua をおいておくこと
\usepackage[luatex]{bxglyphwiki}
% 書式例 \GWI{zihai-021005}
```

`bxglyphwiki.sty` reportedly can be incompatible with other style files at times. If it does not work correctly, try removing other style files or changing their loading order to adjust.

6.7.3.2 The *sfkanbun* Package (*Kanbun*) *sfkanbun.sty*

This uses the style file created by Fujita Shinsaku.

It is obtained from the “縦組パッケージファイル” (“Vertical Typesetting Package Files”) section of [TeX/LaTeX Applications by Shinsaku Fujita](#).

As it cannot be used with LuaLaTeX as-is, modifications were made with reference to [Re: LuaLaTeX で漢文の訓点を使いたい](#) (“Re: I want to use *kanbun kanten* with LuaLaTeX”)

(**broken link**). The renamed version, `sfkanbun-lua.sty`, is available at <https://github.com/shikeda/rose>.

It also seems advisable to add `\par` before `\nointerlineskip`.

The file name could be left as `sfkanbun.sty`, but since this could be confusing, it has been renamed to `sfkanbun-lua.sty`.

`jdkintou.sty`, which is needed internally by `sfkanbun.sty`, should also be obtained from Fujita Shinsaku's site mentioned above and placed in the same folder.

In `kunten2e.sty`, this is specified with `\sougyou` (双行, *sōgyō*, double-line annotation). In `sfkanbun.sty`, by contrast, it is specified with `\tagyobox` (多行割, *tagyōwari*, multi-line split).

Since many TeX files were created using `kunten2e.sty`'s `\sougyou`, it is configured so that `\tagyobox` can be used via `\sougyou`.

Likewise, `kunten2e.sty`'s `\hukusougyou` (複双行, *fuku-sōgyō*) is configured to use `\fukutagyobox` (複多行割, *fuku-tagyōwari*).

```
\usepackage{sfkanbun-lua}
% 多行割 (kunten2e.sty の sougyou に対応させる)
% 文字の大きさ\scriptsize(可変)
% \tagyobox{項目 1 \ \ 項目 2 \ \ ...}
\newcommand{\sougyou}[2]{\tagyobox{#1 \ \ #2}}
% 複多行割 (kunten2e.sty の hukusougyou に対応させる)
\newcommand{\hukusougyou}[2]{\fukutagyobox{#1 \ \ #2}}
```

The following is an input example.

```
新字鏡云醞酖\sougyou{同勅礼反}{平下酒也}酖酖\sougyou{同侯孤}{反飪酖}\ \
    玉篇云醞\sougyou{他禮切酒紅色}{又音提 } 酖 \sougyou{戸吾切}{醞酖也} 酖酖
\sougyou{上音离下}{音祗乳腐}\ \
```

Here are a few of Fujita Shinsaku's samples from [漢文の訓点文の組版](#) ("Typesetting of Kanbun *Kunten* Texts").

```
顔淵・季路\kundoku{侍}{ス}{(。)}
子\kundoku{曰}{ハク}{(、)}
\kundoku{盍}{なん}{ゾ}{三}<ルト>
各\ninojiten\kundoku{言}{ハ}{二}
\kundoku{爾}{なんぢ}{ノ}{ }
\kundoku{志}{ヲ}{一}{(。)}
```

The syntax is as follows.

\kundoku[制御]{親文字}{ルビ}{送りがな}{返り点}[肩返り点](句読点)

This appears capable of quite a lot.

The following is an example.

```
{\large 後} \tagyobox{\vspace{0.5\zw}
\kundoku{后}{\}{}}六 \vspace{0.5\zw}
\kundoku{ノ}{\}{}}チ
\kundoku{ウ}{\}{}}シロ
\kundoku{シ}{\}{}}リへ \vspace{0.5\zw} \vspace{0.5\zw}
\kundoku{オ}{\}{}}ク\kundoku{レ}{ル}{}}タリ
\kundoku{オ}{\}{}}クラ\kundoku{ス}{レ}{}} \vspace{0.5\zw} \vspace{0.5\zw}
\kundoku{オ}{\}{}}コタル
\kundoku{オ}{\}{}}ソシ
\kundoku{禾}{\}{}}コ\kundoku{オ}{レ}{}} \vspace{0.5\zw} \vspace{0.5\zw}
\kundoku{徇}{\}{}}
}
```

This is typeset as follows.

後
ノチ ウシロ シリヘ
オクルタリ オクラス
オコタル オソシ 禾コオレ
徭

Transcription of “後” from an old dictionary

6.7.3.3 The Kuntén Materials Style File `kuntén2e.sty`

Having come this far, upon looking at TeX files created around 2005, redefining everything with `\newcommand` started to become tedious.

Since the files from around 2005 use Kinsui Satoshi's `kunten2e.sty`, an attempt was made to make the commands usable as-is.

It appears that using Kinsui Satoshi's `kunten2e.sty` with LuaLaTeX requires some modifications.

The following changes were made.

```
\kanjiskip --> \ltjgetparameter{kanjiskip}
\xkanjiskip --> \ltjgetparameter{xkanjiskip}
```

```
zw --> \zw  
zh --> \zh
```

There may be other places that need modification, but this will do for now.

The file name was changed to `kunten2e-lua.sty`.

The following change was also made in `sfkanbun.sty`.

```
\nointerlineskip --> \par\nointerlineskip
```

There is no corresponding location in `kunten2e.sty`.

7 Historical Research on Japanese: A Case Study of the Kanchi-in Manuscript of the *Ruiju Myōgishō*

This chapter is Examples and Applications. The case studies are written in Japanese; the English pages in this chapter are summaries or guides, not full translations, of that Japanese content. This section presents historical research on Japanese using the Kanchi-in manuscript of the *Ruiju Myōgishō*. Based on the knowledge obtained during the process of deciphering the *Myōgishō*, we aim to correct errors in the textual interpretation and improve its accuracy. While particularly focusing on the issue of *wakun* (Japanese glosses), we also address the issue of *kanji* (Chinese character) readings.

Wakun is a valuable resource for the vocabulary and phonological history of Japanese, and phonetic notations such as *fanqie* (反切), similar sound glosses (類音注), *kana* glosses (仮名注), and *shōten* (声点) are important resources for the history of Japanese *kanji* readings, with a significant body of research accumulated to date. It is our hope that this research will contribute to providing new analytical perspectives.

The following five case studies are addressed in this chapter. Each English page below presents only the abstract; the full account, including detailed evidence, is available in the Japanese version linked from each page.

Note on Terminology:

- I have kept the Japanese terms *wakun* and *kanji* as they are, as they are commonly used in academic contexts related to Japanese linguistics. I have also provided brief explanations in parentheses.
 - For the phonetic notations, I have provided the Japanese terms along with their English equivalents where applicable, for clarity.

7.1 DHSJR Collaboration

This page is an English-language summary of a working record completed on June 19, 2025 (analysis begun February 16, 2025), documenting the process of preparing KRM data for collaboration with DHSJR (Database of Historical Sino-Japanese Readings). The full account, including detailed worked examples, is kept in the Japanese version, [DHSJR との連携](#); this page presents only a summary. For KRM’s general treatment of **Phonetic Glosses**, see [Types of Phonetic Glosses and Decipherment Issues](#).

This summary reflects the state of the collaboration as of June 2025, when the underlying analysis was completed. The mapped data was subsequently published on September 10, 2025; see [krm_pronunciations](#) for the current status.

7.1.1 1. Overview of DHSJR and the Approach to Mapping KRM Data

- **Purpose of the DHSJR project:** DHSJR (Database of Historical Sino-Japanese Readings) is a project to make Sino-Japanese character and word readings, from the Heian–Kamakura periods through the present, cross-searchable based on annotations such as **Kana glosses**, **Tone marks**, and **Fanqie spellings**. It is led by Professor Katō Daikaku of Waseda University.
- **Including the *Myōgishō* and resource IDs:** The *Myōgishō* is not yet included in DHSJR. Work is underway to extract **Phonetic Glosses** from KRM’s full-text data (`KRM.tsv` and `KRM_definitions.tsv`) and adapt them to DHSJR’s format. Dedicated resource IDs have been reserved and organized for the *Myōgishō*’s several manuscripts (e.g., the Zushoryō manuscript: 30-048-01; the Kanchi-in manuscript: 30-048-02).
- **DHSJR’s 23-column structure:** To load the data, each of DHSJR’s 23 defined data columns (e.g., character headword, tone marks, kana glosses, fanqie, similar-sound notes, material location) was individually mapped to the corresponding KRM data items.

7.1.2 2. Designing Phonetic Gloss IDs and the Row-Splitting Rule for One-to-Many Relationships (the core of `krm_pronunciations`)

- **Basic ID design:** In principle, the **Definition Sequence ID** (`definition_seq_id`, formerly `KRID_no`), which identifies a component of a dictionary **Entry**, and the **Phonetic Gloss ID** (`pronunciation_id`, formerly `KRID_pron_no`) are mapped one to one.
- **Where one-to-many records arise:** When **Kana glosses**, **Fanqie spellings**, **Similar sound notes**, and **Tone marks** occur in combination within a single **Definition**, keeping everything on one row would obscure which character each **Tone mark** actually belongs to.
- **Adding suffix letters (b, c, ...) and splitting rows:** Where a one-to-many relationship arises, suffixes `b`, `c`, `d`, ... `n` are appended to the **Definition Sequence ID** to generate multiple **Phonetic Gloss IDs**, and the data is split across multiple rows (affecting roughly 500-690 cases).
- **Priority order for row splitting:**
 1. The **Headword**’s own direct **Kana gloss** and **Tone mark** (marked with a double circle “◎”) take priority and are recorded on the same row.
 2. A **Phonetic Gloss** stated as part of the **Definition** is recorded as the **Phonetic Gloss** for the **Headword**, on a separate row.
 3. **Kana glosses** or **Tone marks** applied to the individual characters used within a **Similar sound note** or **Fanqie spelling** (**Phonetic Gloss Characters**) are recorded on yet another row, with the target-character field changed accordingly.

7.1.3 3. Data Conversion and Normalization Rules for Tone Marks and Kana Glosses

- **Replacing tone-mark symbols:** The romanized **Tone mark** symbols KRM uses internally (L/F/H/R/T/S/V) are converted in bulk to DHSJR's Japanese-language labels (平/平輕/上/去/入/入輕/濁). The underscore `_` marking the absence of a **Tone mark** (formerly the at-sign `@`, before the March 2025 specification change) is replaced with a full-width asterisk (`*`).
- **Concatenating multiple kana glosses:** Where multiple **Kana glosses** exist, as in “シム／ニム”, they are joined with a full-width slash (`/`).
- **Handling tone marks and nasal marks attached to a kana gloss:** Where a **Tone mark** or nasal-sound symbol (`✓`) is applied to the **Kana gloss** itself, that information is recorded inside full-width parentheses (`()`) within the kana-gloss field — e.g., “和シヨ (`*平`) ” or “リヤウ (`N* *`) ” — kept distinct from the **Tone mark** field used for **Hanzi (Chinese characters)**.
- **Preserving representation via special characters:** Specific characters inserted into a **Kana gloss** to mark a contracted or voiced sound — 火 for the contracted sound *kwa*, 所 for the contracted sound *sho*, 土 for a voiced sound — are retained as-is within the **Kana gloss**.

7.1.4 4. Detailed Processing Rules for Similar Sound Notes, Fanqie, and Reading-Type Markers

- **Separating tone marks within a fanqie spelling:** Where the final character of a **Fanqie spelling** (e.g., “曾” in “蘇曾反”) itself carries a **Tone mark**, the **Headword's** own row (e.g., “僧”) records the fanqie with the tone-mark field left blank, and a separate row is created for the **Phonetic Gloss Character** record (e.g., “曾”) giving its **Tone mark** (平輕).
- **Compound notations such as “二音” and “二反”:** Forms such as “二音”, “二反”, or “二切”, where multiple **Phonetic Glosses** are listed together under one **Headword**, are for now **kept in their original notation** rather than mechanically decomposed, to avoid losing nuance or internal consistency.
- **Protecting reading-type markers and source citations:** **Reading-type markers** — the initial characters 和, 吳, 俗, 今, which indicate the nature of a reading — and **source citations** enclosed in double angle brackets (e.g., 《玉篇》 《說文》) are essential scholarly information for interpreting a **Phonetic Gloss** and are retained in full in the data.

7.2 Wakun Usage Frequency

Ikeda Shoji

January 12–13, 2025, revised April 10, 2025 (English translation added)

7.2.1 Summary

This page is an English-language summary of [和訓の使用頻度](#), a Japanese case study organizing the usage frequency of *wakun* (Japanese readings, 和訓) attested in the Kanchi-in manuscript of the *Ruiju Myōgishō* (KRM), based on `krm_wakun.tsv` as of December 11, 2024. The full frequency tables, tabulating every attested *wakun* form down to a single occurrence, are available only in Japanese; this page presents only the abstract.

Sixteen *wakun* forms occur 100 times or more, led by “*miru*” (みる, 191), “*tsuku*” (つく, 166), and “*toru*” (とる, 159). Related inflectional and adverbial forms cluster together: “*akiraka*” (あきらか, 116), “*akiraka ni*” (あきらかに, 16), and “*akiraka nari*” (あきらかなり, 14) total 146 occurrences between them, suggesting that variant forms of a single stem should be consolidated before frequency counts are compared across words. At the opposite extreme, 4,623 distinct *wakun* forms are attested only once, showing that the great majority of *wakun* in KRM are low-frequency and that high-frequency forms are a small, disproportionately useful subset for annotation work.

The frequency counts also expose an unresolved homograph problem: among the 166 occurrences counted under “*tsuku*” (つく), some are presumed to actually belong to the near-homographic “*tsugu*” (つぐ, 56 occurrences), but the two have not yet been systematically disambiguated in the underlying data.

The Japanese version concludes with three recommendations for future *wakun* annotation work: prioritize investigation of high-frequency forms first; consolidate variant forms ending in “*nari*” (なり) or “*ni*” (に) with their base stem before counting; and remain alert to homograph conflation of the kind seen with “*tsuku*”/“*tsugu*” throughout the investigation.

7.3 Homograph Distinction

Ikeda Shoji

January 13 – February 11, 2025

7.3.1 Summary

This page is an English-language summary of [同仮名異語の区別](#), a Japanese case study investigating the distinction between homographs (distinct words sharing the same kana spelling) in the Kanchi-in manuscript of the *Ruiju Myōgishō* (KRM). The full account,

including the character-by-character evidence, is available only in Japanese; this page presents only the abstract.

This note uses the *wakun* “*tsuku*” (ツク) as a test case for distinguishing homographs.

Whereas the earlier investigations of “*ugoku*” and “*miru*” focused mainly on verifying the *hyōki* column of the *Nihon Kokugo Daijiten*, 2nd edition (*Nikkoku*), this note takes a different approach, using the three-volume *Iroha Jiruishō* (the Maeda and Kurokawa manuscripts) as a lens for examining KRM’s *wakun*. A survey of *Nikkoku* and the *Kadokawa Kogo Daijiten* found 14 and 10 separate headword entries for “*tsuku*,” and 4 and 2 for “*tsugu*,” respectively — evidence of substantial homography. Sorting KRM’s “*tsuku*” and “*tsugu*” attestations by the *Nikkoku* IDs assigned in `KRM_wakun.tsv` split them into several distinct word groups (e.g., “付・着・就・即・憑” and “突・衝・撞・搗・舂・築・吐”), while 60 “*tsuku*” instances and 1 “*tsugu*” instance could not yet be assigned an ID and still need sorting.

The note then tabulates the *Iroha Jiruishō*’s *tsu* (ツ) entries by meaning group — *fu* (付, 54 characters), *tsugi* (次, 51), *totsu* (突, 30), *tsuke* (漬, 1), *tsugeru* (告, 19), and *tsuku* / “pound” (舂, 8), plus *zuku* (ヅク, “owl,” 1) — cross-referencing each character’s location in KRM and its attestation in *Nikkoku*’s *hyōki* column against the annotations in Satō Kiyoji’s *Iroha Jiruishō Ryakuchū* and the *Jigi Jikun Jiten*. For each group, a consistent set of counts was tallied: how many characters the two reference works annotate, how many appear in the *Iroha Jiruishō* but not in KRM, and how many are missing from *Nikkoku*’s *hyōki* column; for the *fu* (付) group, for example, the two works together annotate 52 of 54 characters (96%). Characters left unannotated by both works — such as 捫, 扔, and 戀 — were individually traced through sources including the *Guxun Huizuan*, the *Guangyun*, and the *Tenrei Banshō Meigi*. For *zuku* (ヅク, “owl”), the *wakun* readings of six KRM headwords, including 巧婦 and 鵲, were investigated through the *Erya* and the *Shinsen Jikyō*, and the Unicode variant forms of 兔 were also sorted out.

The investigation ranged widely and could not be brought to a tidy conclusion, so this note is left as a stopping point rather than a finished study.

7.4 Investigating Wakun “Ugoku”

Ikeda Shoju

December 22–26, 2024

7.4.1 Summary

This page is an English-language summary of [和訓「ウゴク」の調査](#), a Japanese case study investigating attestations of the *wakun* “*ugoku*” (ウゴク) in the Kanchi-in manuscript of the *Ruiju Myōgishō* (KRM). The full account, including the character-by-character evidence, is available only in Japanese; this page presents only the abstract.

This note compiles attestations of the *wakun* “*ugoku*” (ウゴク) and its related forms “*ugokasu*” (ウゴカス), “*ogoku*” (オゴク), and “*ogokasu*” (オゴカス) in KRM, as reference material for annotation work. KRM has 34 characters bearing the single-character *wakun* “*ugoku*,” of which 11 carry a confirmed tone mark. Cross-checking these against the *hyōki* (表記, “orthographic forms”) column of the *Nihon Kokugo Daijiten*, 2nd edition (*Nikkoku*) found 27 already listed there and 7 not listed. Of the 7 unlisted characters, six — 頷, 振, 掉, 忧, 躁, and 難 — have textual grounds (a gloss of “動也,” “means to move”) in Chinese-side dictionaries such as the *Shuowen Jiezi*, the *Tenrei Banshō Meigi*, the *Yupian*, and the *Guangyun*; 振 in particular also carries the same reading in the *Iroha Jiruishō*, suggesting *Nikkoku*’s omission is a simple oversight. 債 and 招 can likewise be explained as confusions with the graphically similar characters 債 and 招, so all seven could reasonably be added to *Nikkoku*’s column. 化, however, has no “動也” gloss traceable in Chinese sources, and its “*ugoku*” reading is suspected to be a conflation with the graphically similar character 吡.

The note then compares KRM against the three-volume *Iroha Jiruishō* and surveys actual attestations in the *Kunten Goi Shūsei* and the *Gunsho Chiyō Keibu Goi Sakuin*, finding “*ugoku*” directly confirmed for only 9 and 4 characters respectively — far fewer than KRM’s 34. For the related forms, KRM records 29 characters with “*ugokasu*,” 32 with “*ogoku*,” and 3 with “*ogokasu*,” though corroboration from the *Iroha Jiruishō* or *kunten* materials is limited. Finally, cross-referencing the characters glossed “動也” in the *Erya*’s *Shigu* and *Shixun* chapters and the *Guangya*’s *Shigu* I found that 6 of the *Erya*’s 9 such characters and 10 of the *Guangya*’s 28 match KRM’s “*ugoku*”-type *wakun*.

The investigation concludes that, for annotating KRM’s *wakun* — not only “*ugoku*” — checking the Chinese dictionaries and rime books (*Shuowen Jiezi*, *Erya*, *Guangya*, *Yupian*, *Guangyun*) for textual grounds, and, where needed, tracing the philological lineage through Morohashi’s *Dai Kan-Wa Jiten* and the *Guxun Huizuan*, is an effective method.

7.5 Investigating Wakun “Miru”

Ikeda Shoju

January 4–11, 2025

7.5.1 Summary

This page is an English-language summary of [和訓「ミル」の調査](#), a Japanese case study investigating attestations of the *wakun* “*miru*” (ミル) in the Kanchi-in manuscript of the *Ruiju Myōgishō* (KRM). The full account, including the character-by-character evidence, is available only in Japanese; this page presents only the abstract.

This note uses the *wakun* “*miru*” (ミル) as a test case to examine the reliability of the *hyōki* (表記, “orthographic forms”) column in the *Nihon Kokugo Daijiten*, 2nd edition (*Nikkoku*). After tabulating the source editions and dates of the 17 pre-modern dictionaries cited in *Nikkoku*’s own dictionary-source column, I confirmed that 15 of them, including KRM, do record “*miru*,” but found that the *Shinsen Jikyō* — despite being listed — does not actually attest the reading, an error in *Nikkoku*’s source citations. *Nikkoku*’s *hyōki* column lists 104 attestations for “*miru*” (103 single-character, 1 compound), of which 53 characters (about half) were entered as bitmap images in the 2007 JapanKnowledge edition because they could not be input in Unicode at the time; nearly all can now be represented in Unicode. Checking these against the Kanchi-in manuscript’s text turned up seven apparent input errors (e.g., 呪 should be 睨) and one omission — 瞞, which does appear in KRM but is missing from the *hyōki* column. Cases of apparent confusion between graphically similar characters, such as 睨 and 瞞, were also examined individually.

Surveying, in order of appearance, the characters in KRM bearing “*miru*” that are not listed in *Nikkoku*’s *hyōki* column turned up over 100 characters: 51 have textual grounds confirmable in dictionaries such as the *Shuowen Jiezi*, the *Tenrei Banshō Meigi*, and the *Guangyun*, and could reasonably be added to the column; 11 appear to be misreadings caused by graphic confusion with similar characters; and no textual basis could be identified for the remaining 32. A comparison with the *Ekirin-bon Setsuyōshū* also found that 9 of *Nikkoku*’s compound-word attestations do not appear in that dictionary’s “Bi” (美) and “Genji” (言辭) sections.

In conclusion: (1) the *hyōki* column’s entries generally have reliable semantic correspondence; (2) it nonetheless contains outright errors (6 characters); (3) it has room for defensible additions (about 50 characters); (4) some entries are misreadings from graphically similar characters (11); and (5) some entries have no identifiable textual basis (32). Identifying character forms and judging the correctness of glyph input are unavoidable tasks in annotating KRM; the supporting evidence for each case is recorded in the `remarks` column of `KRM_wakun.tsv`.

8 Development History

This chapter is part of the Project Records. It documents how the KRM Database was constructed, distinct from the normative Core Documentation.

8.1 Database Construction Process

The *Ruiju Myōgishō* of the Kanchi-in manuscript is an old handwritten manuscript, and because it contains an extremely large number of difficult characters, we proceeded with database construction using the following steps.

Step 1: Scan the facsimile edition and cut out each listed character to create an image database of the *Ruiju Myōgishō* of the Kanchi-in manuscript. The image files of the listed characters are named according to the location of the listed character. This image file name will later be used as the listed character ID.

Step 2: Add the location information to the existing *Tenrei Banshō Meigi* database by referring to the “Kanji Index” included in Masamune Atsuo’s *Ruiju Myōgishō, Volume 2* (Kazama Shobō, 1955). Input the location information from the “Kanji Index” into the *Tenrei Banshō Meigi* data rearranged in the order of the *Dai Kanwa Jiten* index numbers compiled by Morohashi Tetsuji. Then, rearrange it according to the order of locations in the Kanchi-in manuscript, collate it with the text of the Kanchi-in manuscript, and add the page numbers and character order of the Kanchi-in manuscript that are not found in the “Kanji Index.”

Step 3: Take in various information included in the *Tenrei Banshō Meigi* database (*Dai Kanwa Jiten* index numbers, Unicode numbers, kanji characters, location information in the *Tenrei Banshō Meigi*) and the corresponding location information of the *Ruiju Myōgishō* Kanchi-in manuscript created in Step 2, into the *Ruiju Myōgishō* Kanchi-in manuscript image database (created in Step 1) to create an input database for the *Ruiju Myōgishō* Kanchi-in manuscript text.

Step 4: While referring to the facsimile edition of the *Ruiju Myōgishō* Kanchi-in manuscript (Tenri Library Rare Books Series, Japanese Books Section, Volumes 32-34) and the *Ruiju Myōgishō* Kanchi-in manuscript image database, add the text information for the listed characters and their explanations (“chūmon/chūbun”) to the input database for the *Ruiju Myōgishō* Kanchi-in manuscript text created in Step 3.

Step 5: Integrate the *Ruiju Myōgishō* Kanchi-in manuscript image database and the *Ruiju Myōgishō* Kanchi-in manuscript text database to form the *Ruiju Myōgishō* Kanchi-in manuscript database. Then, check and revise the text content using the newly published color facsimile edition of the *Ruiju Myōgishō* Kanchi-in manuscript (New Tenri Library Rare Books Series, Volumes 9-11). When checking the text content, also distinguish between compound word entries and variant character entries in the listed items, and

distinguish between font annotations, pronunciation annotations, meaning annotations, and Japanese glosses in the explanations, and add this information.

Step 6: Publish the completed *Ruiju Myōgishō* Kanchi-in manuscript database on the internet and provide a search service.

8.2 Online Information Provision

HDIC's online information provision consists of three parts: the main site, the search screen, and the text data. The main site is available at the following URL and summarizes the overview of the Integrated Database of Hanzi Dictionaries in Early Japan (HDIC) (in Japanese, Chinese, and English), a list of research results, links to related sites, etc.

<https://hdic.jp>

The search screen is available at the following URL, where you can use the HDIC Viewer to search the Integrated Database of Hanzi Dictionaries in Early Japan (HDIC). The HDIC Viewer is maintained and managed by [Liu Guanwei](#) and allows searches not only on personal computers but also on smartphones. <https://viewer.hdic.jp>

We would like to express our gratitude to [Tomohiko Morioka](#) for his technical support in maintaining and managing the `hdic.jp` website.

The text data created by the Integrated Database of Hanzi Dictionaries in Early Japan (HDIC) is available at <https://github.com/shikeda/HDIC>, which preserves records of data revisions and provides the latest versions of the full-text databases for the Song Dynasty edition of the *Yupian*, the Kōzan-ji manuscript of the *Tenrei Banshō Meigi*, and the Tenji manuscript of the *Shinsen Jikyō*.

The KRM data specifically underwent a specification change in March 2025, and its current full-text database is published separately at <https://github.com/shikeda/krm> (see [Resource Documented](#) for the current version and citation).

Please note that the above URLs are subject to change in the future. Maintaining and managing the constructed data is a significant challenge.

8.3 Development of the KRM Documentation

The repository history begins with a commit dated 6 January 2022. The documentation repository began that January as a collection of KRM notes and explanatory pages. During 2022–2025, it gradually accumulated descriptions of the manuscript, data structure, input procedures, annotation methods, progress records, and research case studies. In 2026, the repository was expanded to support automated site deployment and external data integration. From July 2026, the accumulated materials were reorganized explicitly as the KRM Documentation Project, with the introduction of a Project Charter, Documentation Blueprint, Roadmap, editorial conventions, style guides, and review procedures. This reorganization led to the first complete English draft, Version 0.9, on 15 August 2026.
